EXECUTIVE SUMMARY
At the request of Forest City Residential Group (Forest City), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of real property known as the City Yard and located at 224 East Main Street in the City of New Rochelle, Westchester County, New York (Site) (Figures 1 and 2). The Site is identified in City of New Rochelle tax maps as Section 1, Block 84, Lot 5. The Phase I ESA was performed in preparation of prospective purchase of the Site by Forest City.

The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and Forest City dated May 8, 2012 and in general accordance with the American Society of Testing and Materials’ (ASTM) standard practice for Environmental Site Assessments for Commercial Real Estate (ASTM E 1527-05, 2005), and the All Appropriate Inquiry (AAI) Rule as promulgated in 40 Code of Federal Regulations (CFR) Part 312.

Roux Associates utilized a variety of information sources to perform the Phase I ESA, including radial information searches from state and federal regulatory agency databases, freedom of information law (FOIL) requests submitted to federal, state and local regulatory agencies, a review of readily available information including: historical aerial photographs, historical Sanborn fire insurance maps, historical topographic maps, City Directory search, lien search, interviews with site representatives, and observations made during Site reconnaissance.

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following RECs in connection with the Site.

- **Open release cases**: Three spill cases are open with the NYSDEC (Spill Nos. 10-11242, 01-01307 and 98-00763). The spill incidents pertain to the release into the subsurface of gasoline and fuel oil from former USTs located between the vehicle storage building and the vehicle repair building.

- **Four locations of staining indicative of a release**: At the following locations, staining indicative of a release of petroleum products or hazardous substances was observed:
  - On the concrete floor underneath the oil burner’s oil filter, in the basement of the Bureau of Streets and highways office building. The concrete floor at that location was cracked and in poor condition.
  - On the concrete pad and underlying pavement of the outdoor gasoline storage shed abutting the stock room.
- On the concrete floor around the southernmost of two oil burners located in the boiler room in the rear (west) of the bureau of sanitation offices. The concrete floor at that location was cracked and in poor condition.

- On the ground at the location of an outdoor drum storage area, together with several one-gallon containers and associated spillage nearby. Grade at that location consisted at one time of the concrete floor of a building, now razed and overgrown with vegetation, making the concrete at that location cracked and easily permeated.

- **Current fuel dispensers, and product piping**: The integrity of the gasoline and diesel dispensers, and of the associated underground piping, is not known. As such, the fuel dispensers and underground piping pose a material threat of release of petroleum products to the subsurface.

- **Closed release case**: A spill occurred on 3/4/1998, when unknown petroleum product seeped into Long Island Sound from an embankment at the Site (NYSDEC Spill No. 97-13423), which is indicative of petroleum product in onsite subsurface media. The spill was closed on May 4, 1998. However, there was no indication of an investigation or remediation of onsite subsurface media in connection with the release in available records.

- **Former petroleum USTs**: Nine former USTs that stored motor oil, waste oil, fuel oil, gasoline and diesel fuel were installed at the time of construction of the vehicle repair garage and were reported with releases to the subsurface at the time of removal. The above-mentioned three open release cases and an additional five closed release cases are associated with these USTs.

One former 3,000-gallon No. 4 fuel oil UST was reported to service the vehicle storage garage and to have been removed, with exact location unknown. A former kerosene AST was also located in the central region of the Site, near the existing washdown station. The status and integrity of these storage tanks and associated piping is not known. As such, these tanks posed a material threat of subsurface contamination.

One former 2,000-gallon fuel oil UST was reportedly located in the rear (west) of the sanitation garage and removed. However, a vent pipe and two apparent ports to a subgrade void filled with rainwater were observed in a concrete platform in that area, indicative of a potential UST. The status and integrity of this storage tank and associated piping is not known. As such, this tank, whether still in place or removed, poses a material threat of subsurface contamination.

- **Current onsite use for vehicle repair**: Presently the southernmost building is used as a vehicle repair garage. One in-ground oil/water separator collects wastewater from the drainage system of the garage. The oil/water separator, associated drainage piping, and possibly an associated holding tank represent a material threat of release of hazardous substances and petroleum products into the subsurface. Additionally, in-ground lifts are present in the garage. The buried containers of hydraulic oil associated with the lifts, if any, pose a material threat of a release to the subsurface.
Historic onsite uses: The Site was occupied by a boat yard in 1911, was operated as a Department of Public Works facility since 1917, included a sewage disposal plant that operated from 1926 until circa 1955 and serviced by outdoor transformers, and several onsite buildings have been used for vehicle repair, prior to construction of the existing vehicle repair garage in 1969. The occupants had reasons to handle hazardous substances or petroleum products during the conduct of operations. The potential exists for releases of hazardous substances or petroleum products into the subsurface media at the Site.

Offsite sources of groundwater contamination: There are several current and historic, adjacent and nearby hydraulically upgradient properties with activities, conditions or incidents likely to cause or contribute to releases or threatened releases of hazardous substances and petroleum products. The collective potential exists for hazardous substances and petroleum products migration from these properties to the Site, particularly through groundwater migration.

Although not technically defined as RECs, the following is a list of potential environmental concerns at the Site that could potentially impact subsurface conditions at the Site:

- The Site is underlain by historic/urban fill material whose origin and environmental quality is unknown. In particular, a strip of fill material, approximately 50 feet wide, accreted along Echo Bay at or around the time of construction of the existing vehicle repair garage.

- A large amount of soil and debris has been placed between the recycling yard and the vehicle storage garage. No documentation was provided for the environmental quality of this debris.

- *De minimis* staining resulting from poor housekeeping was observed in the vehicle repair garage and throughout the outdoor paved and unpaved areas, including those used for the staging of fleet vehicles.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Pending partial response to FOIL requests from the USEPA and the NYSDEC. If any additional pertinent information is obtained from responses to outstanding FOIL requests, Roux Associates will prepare a letter addendum summarizing these findings.

- Overgrown vegetation did not allow for the inspection during Site reconnaissance of a strip of land along the rear (west) exterior wall of the northernmost buildings (i.e., those buildings used as a locker room, stock room, and storage room).
Please note that although the partial lack of record sources from the NYSDEC and USEPA listed above is considered a data gap, it is not considered a material limitation for the completion of this Phase I ESA report.

**Recommendations for the City Yard**

A Phase II Investigation is recommended to further investigate the RECs identified for the City Yard property. The investigation will include sampling of subsurface media (soil, groundwater and potentially soil vapor) on the property. It is also recommended that investigation and characterization of fill material on the Site, in particular a strip of fill material, approximately 50 feet wide, accreted along Echo Bay, be performed.

It is also recommended that prior to and/or during redevelopment of the property, proper characterization and disposal of stored chemicals and drums be performed.

As noted, access was not gained to the overgrown strip of land along the rear (west) exterior wall of the northernmost buildings during the Site reconnaissance. As such, Roux Associates recommends that access be obtained to that area in an attempt to determine if additional RECs are present. If additional RECs are identified, then the Phase II Investigation could be refined accordingly to address them.

At least three spills (i.e., one recent and two that appear not to have been addressed since 2007) remain open for the City Yard. As part of the Phase II Investigation, we recommend further investigation and evaluation of these spills. Based on the results of the Phase II Investigation, the need for remedial action will be evaluated.
1.0 INTRODUCTION

At the request of Forest City Residential Group (Forest City), Roux Associates, Inc. (Roux Associates) performed a Phase I Environmental Site Assessment (ESA) of real property located at 224 East Main Street in the City of New Rochelle, Westchester County, New York (Site) (Figures 1 and 2). The Site is identified in City of New Rochelle tax maps as Section 1, Block 84, Lot 5. The Phase I ESA was performed in preparation of prospective purchase of the Site by Forest City.

The Phase I ESA was conducted in accordance with the scope of work presented in the contract between Roux Associates and Forest City dated May 8, 2012 and in general accordance with the American Society of Testing and Materials’ (ASTM) standard practice for Environmental Site Assessments for Commercial Real Estate (ASTM E 1527-05, 2005), and the All Appropriate Inquiry (AAI) Rule as promulgated in 40 Code of Federal Regulations (CFR) Part 312.

This Phase I ESA is not intended to serve as a rigorous environmental compliance audit; rather, the purpose of this investigation is to identify “recognized environmental conditions” (RECs) at the Site. ASTM E 1527-05 defines an REC as:

“...the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not represent a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not recognized environmental conditions... or

“...an environmental condition which in the past would have been considered a recognized environmental condition, but which may or may not be considered a recognized environmental condition currently. The final decision rests with the environmental professional and will be influenced by the current impact of the historical recognized environmental condition on the property through reviewing and gathering information relating to the following at the Site:

(1) Current and past property uses and occupancies;
(2) Current and past uses of hazardous substances and petroleum products;

(3) Waste management and disposal activities;

(4) Current and past corrective actions and response activities;

(5) The presence of any engineering controls;

(6) The presence of any institutional controls; and

(7) Information relating to properties adjoining or located within a quarter mile of the Site.”

In order to assess the potential for RECs associated with the Site, Roux Associates utilized a variety of information sources, including radial information searches from state and federal regulatory environmental databases, Freedom of Information Law (FOIL) requests submitted to federal, state and local regulatory agencies, a review of readily available information including historical aerial photographs, historical Sanborn fire insurance maps, historical topographic maps, interviews with site representatives, and observations made during a site inspection. The qualifications of key personnel assigned to manage and conduct the Phase I ESA are provided in Appendix A.
2.0 METHODS OF INVESTIGATION
The methods of investigation used to conduct this Phase I ESA are outlined in the following sections.

2.1 General
The activities performed in conjunction with the Phase I ESA of the Site included:

- Review of state and federal environmental regulatory agency databases provided by Environmental Data Resources, Inc. of Milford, Connecticut (EDR), indicating sites of environmental concern within specified radii from the Site (Appendix B);
- Submission of FOIL requests to federal, state, and local regulatory agencies;
- Review of historical information for the Site and surrounding area;
- Interview conducted on July 10, 2012 with Mr. Domenic Acocella, the owner’s representative and key Site manager; and
- Reconnaissance of the Site and surrounding area.

2.2 Review of Readily Available Information
The resources compiled and reviewed by Roux Associates to date include the following:

- EDR Radius Map Report, dated June 22, 2012 (EDR report) (Appendix B);
- Historical Sanborn fire insurance maps dated 1911, 1931, 1942, 1951, 1990 to 1996, and 2003 (Appendix C);
- A search for Environmental Liens and Activity Use Limitations (AULs) (Appendix F); and
- A search of the historical City Directories conducted by EDR (Appendix G).
The agencies contacted during the records review are provided below:

<table>

2.3 Site and Surrounding Area Reconnaissance

Roux Associates conducted a reconnaissance of the Site and surrounding area on July 10, 2012 to identify, investigate, and assess RECs and other environmental concerns. The Site reconnaissance included a review of the following:

- Site and local topography;
- Visible drainage pathways;
- Stained soil, stained concrete/pavement;
- Stressed vegetation, excavations, mounded soil;
- Ponded liquids, drywells, floor drains, and sumps;
- Locations and types of utilities;
• Storage areas;
• Hazardous materials;
• Hazardous wastes;
• Presence of aboveground storage tanks (ASTs) and/or USTs;
• Presence of electrical transformers; and
• Current use of adjacent properties.

This Phase I ESA does not include a review of or discussions regarding asbestos-containing material (ACM), lead based paint (LBP), or radon surveys as they are considered “out-of-scope” under ASTM E 1527-05. Photographs from the Site reconnaissance are included in Appendix H.

2.4 Previous Environmental Investigations
Roux Associates requested documentation on previous environmental investigations from Forest City, the Site owner and the NYSDEC. At the time of issuance of this Phase I ESA, Roux Associates was provided with and reviewed the following previous environmental reports prepared for the Site, provided in Appendix J and summarized in Section 3.4. These previous environmental investigations also included three environmental assessments (Hill, 1994; Foster Wheeler, 2003; and Environmental Liability Management, 2007 – see below). The ASTM E1527-05 Prior Assessment Usage Procedures were followed and the information appropriate for usage in this Phase I ESA was incorporated by reference. The list of previous environmental investigations follows:

• Phase I Environmental Site Assessment, Hill International Inc., November 14, 1994
• Draft Brownfields Site Background Memorandum for New Rochelle City Yard, Foster Wheeler Environmental Corporation, March 2003
• Phase I Environmental Site Assessment Report, Environmental Liability Management of New York, LLC., June 20, 2007
• Groundwater Monitoring System at City Garage, Mr. Orszeulik, March 6, 2002
• UST Closure Report, Ira D. Conklin & Sons, Inc., May 21, 2002
• Report of Groundwater and Soil Investigation for Petroleum Contamination, Hydroenvironmental Solutions, Inc., August 2002

• Scope of Work Consulting Services for Site Remediation of Contamination at City Yard, Schoor DePalma, Inc., January 13, 2003

• Revised Site-Specific Brownfields Field Sampling Plan for the New Rochelle City Yard Property, Foster Wheeler, November 21, 2003

• Remedial Feasibility Test Summary Report, Groundwater & Environmental Services, Inc., January 25, 2005

• CHEMTECH Laboratory Data Package, June 14, 2006

• Preliminary Geotechnical Report, Echo Bay Project, Mueser Rutledge, Consulting Engineers, April 3, 2007

3.0 PROPERTY DESCRIPTION

Descriptions of the Site and surrounding properties are included in the following sections. The location of the Site is presented in Figure 1. The Site and surrounding properties are presented in Figure 2.

3.1 Property Location and Description

The Site location is depicted on Figures 1 and 2. The Site is reportedly 6.47 acres in size and is occupied by the City of New Rochelle Department of Public Works. The Site was improved with several buildings constructed as early as 1917, and presented in greater detail in the table below.

Certain glass, plastic and metal household items are staged in the northwest region of the Site as part of the City of New Rochelle’s recycling program for commingled waste. Fleet vehicles and a large salt pile are staged within an unpaved southeastern region of the Site. All Departments within the City of New Rochelle have official vehicles serviced at the Site, with the sole exception of the Fire Department. Additional Site details are provided in Section 6.0.

Notes:  
NA – Not Applicable

3.2 Current Surrounding Property Usage
The Site is situated within a generally commercial area along both sides of Main Street, with detached residential homes property to the north of Main Street. The New Rochelle wastewater treatment plant, located to the east of the Site across Echo Bay, is the only major
non-commercial facility immediately surrounding the Site. The table below details the adjacent property usage surrounding the Site, which is further depicted in Figure 2.

| North | Main Street (a.k.a. East Main Street), followed further north (and east of Stephenson Boulevard) by a strip shopping plaza named Main Street Plaza and another strip shopping plaza (west of Stephenson Boulevard) named East End Shoppes. The dry cleaner business named Elite Cleaners (see Section 5.0) is located at 235 Main Street, within the East End Shoppes strip plaza. |
| South | Echo Bay borders the Site to the south. |
| East | The Site is adjoined to the east, along Main Street, by a standalone building that is partly vacant and partly used for auto repair. The existing business is advertised as AAMCO Transmissions. Echo Bay also borders the Site to the east, followed further east by the New Rochelle wastewater treatment plant. |
| West | The former New Rochelle Armory, presently vacant, adjoins the Site to the east. |

3.3 Topographic and Hydrogeologic Setting
The grade at the Site gently slopes southeasterly from approximately 24 feet above mean sea level (ft-amsl) along Main Street to approximately 8 ft-amsl at the bulkhead along Echo Bay, according to the USGS 7.5 Minute Series Topographic Map – Mount Vernon Quadrangle (Appendix E), the Westchester County GIS database, and the topographic map titled Topographic Layout – City Yard, dated December 1, 1947 and made available by the Department of Public Works (Appendix J). In a small area at the northwest corner of the Site, bedrock is visible and land surface elevation is approximately 34 ft-amsl.

The grade in the surrounding area has a gentle southeasterly slope toward Echo Bay, with the westerly adjoining former City Armory being situated at a somewhat higher topographic elevation than the Site, of approximately 34 ft-amsl near Main Street.

According to the EDR report and the National Wetlands Inventory database maintained by the United States Fish and Wildlife Service, the portion of Echo Bay that adjoins the Site is regulated as a subtidal estuarine wetland with unconsolidated bottom (E1UBL). According
to the Westchester County GIS database, there are no hydric soil wetlands or wetlands regulated by the NYSDEC on or adjoining the Site, but coastal shoals/bars/mudflat tidal wetlands are present in Echo Bay. According to same database, the Site is located within the County Designated Long Island Sound Critical Environmental Area.

According to Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) number 36119C0342F, the southeast region of the Site, along Echo Bay, is situated in an area with the 1% annual chance of flood, whereas the remaining onsite areas, with the exception of the thin strip along Main Street, area located within the 0.2% annual chance flood.

The Site and vicinity is sequentially underlain by an approximate 3 to 13 feet, of sandy fill material (Mueser Rutledge, 2007), followed by an unconsolidated overburden that consists of an unsorted heterogeneous mix of Pleistocene and Recent glacial material (i.e., glacial till) including clay, silt, sands, gravel, cobbles, and boulders (U.S.G.S., 1902; Cadwell, 1989; Mueser Rutledge, 2007). These are deposits of the Late Wisconsinan glaciation, which ended circa 12,000 years ago. These glacial deposits are unconformably underlain by weathered rock and amphibolites/schist bedrock of the Ordovician to Cambrian aged Hartland Formation (Fischer et al., 1995). In addition, according to historic aerial photographs and Sanborn maps (Section 4.0), drawings made available by the Department of Public Works (Appendix J) and a prior geotechnical report (Mueser Rutledge, 2007), fill material was used to expand the Site into Echo Bay by approximately 50 feet.

According to the results of prior geotechnical and environmental investigation activities (see Section 3.4), the depth to groundwater at the Site varies between 6 to 11 feet below land surface (ft-bls). Based on the abovementioned topographic elevation maps and a prior environmental investigation performed by HydroEnvironmental Solutions, Inc. (see Section 3.4), the general direction of shallow groundwater flow is southeasterly towards Echo Bay. Groundwater flow direction and depth to groundwater may be subject to tidal influence, subsurface variations in geology and local dewatering projects.
3.4 Summary of Previous Environmental Investigations

Roux Associates reviewed several previous studies and other relevant documentation related to the Site as part of this Phase I ESA. A summary of each document reviewed and the findings of said documents are provided below. A full copy of each document can be found in Appendix J of this report.

Phase I Environmental Site Assessment, Hill International Inc., November 14, 1994

A Phase I Environmental Site Assessment was performed at the Site between October 14, 1994 and November 11, 1994. The ESA was performed by Kaselaan & D’Angelo Associates, Inc. at the request of the Department of Development of the City of New Rochelle. The final ESA report, dated November 14, 1994, was prepared by Hill International, Inc. A copy of the report is included as Appendix J. According to Hill, the City’s Department of Public Works has used the property as a staging area since at least 1917. The Site had a sewage disposal plant and has had a sewer right-of-way since at least 1911. A boat house and an ice house were identified on the Site in 1911 and 1867, respectively. A total of six separate one-story structures were identified on the Site during the 1994 ESA and included: a Carpentry Shop; a Sewers and Drains, Streets and Highways Building; a Compost Building; a Machinery/Car Storage Building; a Repair Garage; and Bookmobile Storage Building. The uses for the Site at the time of the ESA included parking, maintenance, washing, fueling and repair of City vehicles (except Fire Department vehicles), and as offices and a staging area for the Department of Public Works’ (DPW) activities. The Site was also being utilized as a transfer station for recyclables and for the storage of salt and sand.

Draft Brownfields Site Background Memorandum for New Rochelle City Yard, Foster Wheeler Environmental Corporation, March 2003

Foster Wheeler Environmental Corporation (Foster Wheeler) under contract to the EPA prepared and submitted a document entitled Brownfields Site Background Memorandum (Memorandum) for the Site. The Memorandum presented the findings of a background investigation of the Site. The objectives of the background investigation were to:

- Determine the nature and extent of contamination at the Site;
- Determine the risks posed by the contamination;
• Determine the potential remedial alternatives to minimize continued risks to human health and/or the environment; and

• Estimate costs of identified cleanup options in the scope of site redevelopment.

The Scope of Work for preparing the Memorandum included: evaluation of existing data and documents, performance of an environmental regulatory database search and performance of interviews with property owners and occupants.

Two previous studies and a scope of work for site remediation prepared by others were also included as attachments to the Memorandum (summaries of those documents are provided next).

The Memorandum identified the following areas of concern at the Site:

• **Groundwater and Soil Impacts:** The Memorandum reported that a 2,000-gallon gasoline UST failed at the Site and that approximately 1,400 gallons of free product were pumped out of the basement of the former treatment plant. As noted in the Memorandum, a groundwater and soil investigation concluded that dissolved and adsorbed BTEX compounds were present in the soils and groundwater beneath the Site. The Memorandum indicated that the City of New Rochelle had contracted Schoor DePalma, Inc. to determine the extent of the plume, conduct a pilot study, design, construct and install a remediation system and report on the effectiveness of the system.

• **Consolidated Edison Property:** The Memorandum noted a former Consolidated Edison substation was located between 0.125 and 0.25 miles to the southwest of the Site at a higher elevation. According to the Memorandum, cleanup activities to remove PCB contaminated soil and sediment from the Consolidated Edison property, adjacent commercial and residential properties and the Echo Bay tidal lands were almost complete. Foster Wheeler recommended that soil and sediments from the southern portion of the property along Echo Bay be tested for PCBs to evaluate potential impacts to the property from the former Consolidated Edison facility.

• **Spills:** The Memorandum reported seven spills at the Site. Recommendations were made to review supplemental information regarding the spills and to perform soil and groundwater sampling in the vicinity of the identified spills to evaluate potential subsurface impacts.

• **USTs:** The Memorandum reported that up to 12 USTs may be present at the Site. The Memorandum recommended that the locations of all in-use and former USTs at the Site be determined and that UST closure reports and tank test reports be obtained. Recommendations were also made for soil and groundwater sampling to be
performed in the vicinity of the former USTs to evaluate potential subsurface impacts.

- **ASTs:** The Memorandum reported three in-service ASTs at the Site and recommended that if stained areas are observed in the vicinity of the tanks, that soil sampling should be performed to determine if any environmental impacts have resulted from the ASTs.

- **Site History:** The Memorandum suggested a possible buildup of petroleum hydrocarbons and other contaminants due to the historic use of the Site for storage and maintenance of vehicles. The Memorandum recommended that if stained areas are observed, soil sampling should be performed to determine if any environmental impacts have occurred as a result of the historic use of the Site.

- **Transformer:** The Memorandum reported that one transformer was located between the Automotive Repair Garage and the Vehicle Storage Garage and recommended that if stained areas are observed in the vicinity of the transformer that soil sampling be performed to determine if any environmental impacts may have resulted from the transformer.

- **Lead-Based Paint and Asbestos Containing Building Material (ACBM):** The Memorandum noted that due to the age of the buildings on the Site, both lead-based paint and ACBM may be present in the structures. The Memorandum recommended testing of suspect material.

- **Drains:** The Memorandum recommended that if floor drains are present within onsite structures, that samples be collected in the drain and at the discharge location.

- **Non-native Fill:** The Memorandum noted that the Site was expanded into Echo Bay using fill material of an unknown origin and recommended sampling of the material to determine if any environmental impacts exist as a result of introduction of the material.

Hill identified the following environmental concerns associated with activities at the Site:

- A number of activities on the Site, principally associated with vehicle cleaning and repair but also including insecticide, weed killer, paint and paint solvent use, involve the use of hazardous materials and the generation of hazardous waste.

- The long term use of the Site for the storage and repair of vehicles, and the appearance of the soils in topographic lows, especially where paving is absent, suggests the possibility of buildup of petroleum hydrocarbons and other contaminants in soils in localized areas.

- As many as 14 tanks (two of which are not underground) may be present on the Site. Tank tightness testing data was needed to ascertain the integrity of the tanks.
At the time the report was prepared, a Westchester Department of Health and New York State Department of Environmental Conservation, Region 3, files review were pending.

**Phase I Environmental Site Assessment Report, Environmental Liability Management of New York, LLC., June 20, 2007**

Environmental Liability Management of New York, LLC (ELM) completed a Phase I Environmental Site Assessment at the Site during 2007. ELM identified several interconnected one-story brick and concrete structures in the northern portion of the Site and on one free-standing, large, brick structure and one free-standing, large, corrugated metal structure, both in the southern portion of the property. The structures were either used for offices, storage or for the repair of city-owned vehicles at the time of the inspection.

ELM identified the following recognized environmental conditions associated with activities at the Site:

- History of use as a Boat Yard
- History of Auto Repair
- Current and Former Underground and Aboveground Storage Tanks
- Stored Chemicals
- Miscellaneous Fill Material from Unknown Source
- On-site Oil-water Separator
- Former On-site Transformer
- Active Spill Listings
- RCRA Generator Listing
- Previous and Ongoing Site Remediation

**Groundwater Monitoring System at City Garage, Mr. Orszeulik, March 6, 2002**

A figure was prepared by the City of New Rochelle entitled “Groundwater Monitoring System at City Garage” and dated March 6, 2002. The figure was provided in an appendix to the ELM Phase I ESA report. According to ELM, Mr. Orszeulick prepared the figure to document the approximate location of groundwater monitoring wells at the Site. The figure
indicated that six monitoring wells were installed north and east of the corrugated metal garages located on the southern portion of the Site. The figure also showed the following:

- One waste oil UST that was removed from the south of the corrugated metal garage building;
- One diesel UST and one gasoline UST that were removed from north of the corrugated metal garage building;
- One “new” gasoline AST and one “new” diesel AST located northeast of the corrugated metal garage building;
- One “new” oil water separator located north of the corrugated metal garage building; and
- The abandoned sewer pump station located east of the corrugated metal garage building. A notation on this structure states that product was removed and the structure was partially backfilled.

**UST Closure Report, Ira D. Conklin & Sons, Inc., May 21, 2002**

Ira D. Conklin (IDC) was contracted by The City of New Rochelle to conduct an underground storage tank (UST) closure during April 2002. The closure report documented the following:

- Excavation and disposal of one 2,500-gallon waste oil UST.
- Scanning of the soil with a Photoionization detector (PID) to determine volatile organic vapor levels.
- Collection of post-excavation soil samples from the UST excavation for laboratory analysis utilizing EPA Method 8260, EPA Method 8270, and total RCRA metals.
- Compilation/analysis of the site data and the preparation of a UST Closure Report.

The findings of the site assessment, UST removal and soil analytical results were as follows:

- One (1) 2,500-gallon waste oil UST was removed from the Site.
- Final soil screening and laboratory analysis did detect slightly elevated levels of semivolatile organic compounds within the walls and UST excavation.

IDC recommended a passive course of remediation utilizing natural attenuation and that further action would solely be at the discretion of the Westchester County Department of Health.

HydroEnvironmental Solutions, Inc. (HES) conducted a subsurface investigation at the Site during July 2002. The investigation was performed for the City of New Rochelle in response to Spill Number 98-03810 and included drilling of seven on-site test borings, installation of monitoring wells at the test boring locations, collection of soil and groundwater samples for laboratory analysis and permeability testing at each of the monitoring wells. The purpose of the investigation was to delineate the extent of petroleum hydrocarbon impacted soil and groundwater related to the operation of a municipal garage and refueling facility at the Site.

Test borings were completed to depths of 10.3 to 20 feet below land surface (ft-bls). All test borings encountered fill comprised mainly of gravel in a sandy, silty matrix. Groundwater was encountered at 7-10 ft-bls in the test borings. Monitoring wells were installed to completion depths ranging from 10 to 20 ft-bls.

Based on the analytical results, HES concluded that adsorbed benzene, toluene, ethybenzene and totally xylenes (BTEX) compounds were present in subsurface soils and dissolved BTEX and methyl tertiary butyl ether (MTBE) were present in groundwater beneath the Site. Free-phase liquid hydrocarbon was documented in one of the six monitoring wells. The results of field Volatile Organic Compound (VOC) vapor screening of drill cuttings and soil samples and the results of laboratory analysis of soil and groundwater samples, suggest that the majority of hydrocarbon impact is restricted to the westerly portion of. In addition, a buried, former seawall maybe impeding downgradient transport of the hydrocarbons. HES also determined that the moderate to low hydraulic conductivity, as determined by slug tests, may also restrict downward transport of dissolved petroleum hydrocarbons.

HES concluded that the range of hydraulic conductivities, as seen beneath the Site, is suitable for remediation technologies such as soil vapor extraction (SVE), dual-phase high vacuum extraction (DPHVE), and/or air sparging (AS) and suggested that a pilot study be conducted.
to determine which remedial alternative will be most suitable. Based on the findings of the subsurface investigation HES made the following recommendations:

- A quarterly groundwater monitoring and sampling program to document the fluctuations in dissolved VOCs over time, and free product accumulation in monitoring well MW-2.

- Weekly free-phase product collection from monitoring well MW-2, with the collection reduced to semi-monthly or monthly depending on the rate of recovery.

- Determine the impact, if any, of the documented spill on the bedrock aquifer. HES recommended drilling a test boring into the bedrock adjacent to three of the existing monitoring wells.

- Complete a multi-technology pilot study to determine which remedial technology will prove the most appropriate for remediation of the documented gasoline spill.

Scope of Work Consulting Services for Site Remediation of Contamination at City Yard, Schoor DePalma, Inc., January 13, 2003

Schoor DePalma Engineers and Consultants submitted a supplemental Scope of Work (SOW) for Consulting Services for Site Remediation of Contamination at the Site in response to a Request for Proposal from the City of New Rochelle. The background section of the SOW identified the following:

- The main sources of petroleum hydrocarbon contamination at the Site were three former underground storage tanks (USTs) that contained gasoline, diesel fuel, and waste oil.

- The three USTs were removed in 1998, 2001 and 2002, respectively.

- The former sump from a former sewer pump station still existed on-site at approximately 30 ft-bls.

- Hydrocarbon product and petroleum-contaminated water were removed from the sewer pump station in 2001.

- The potential exists that the sewer pump station could be an ongoing source of groundwater contamination.

Groundwater & Environmental Service, Inc. prepared a Remedial Feasibility Test Summary Report for Schoor DePalma dated January 25, 2005. The report documented testing activities that were performed to determine the most appropriate remedial technology to remediate hydrocarbon impacted soil and groundwater at the Site. The report is summarized below.

**Revised Site-Specific Brownfields Field Sampling Plan for the New Rochelle City Yard Property, Foster Wheeler, November 21, 2003**

Foster Wheeler prepared a *Revised Site-Specific Brownfields Field Sampling Plan* under contract to the USEPA for the Site. The Sampling Plan was developed based a review of site background information, observations made during a site reconnaissance and comments from the EPA. The Sampling Plan indicated potential areas of concern to be sampled and the rationale supporting the sampling locations. The sampling program proposed installation of soil borings, collection and analysis of soil samples, collection and analysis of sediment samples from drains and dye testing to determine outfalls of drains, collection of samples of debris piles, and collection of sediment samples from Echo Bay. As indicated on the cover letter to the Sampling Plan, the EPA directed that groundwater sampling would be eliminated.

As documented in the 2007 Phase I ESA report, the City of New Rochelle reported that the sampling program proposed in the *Revised Site-Specific Brownfields Field Sampling Plan* was never performed.

**Remedial Feasibility Test Summary Report, Groundwater & Environmental Services, Inc., January 25, 2005**

Groundwater & Environmental Services, Inc. (GES) conducted remedial feasibility testing at the Site on November 30, 2004. GES conducted the testing activities to determine the most appropriate remedial technology in order to effectively remediate hydrocarbon impacted soil and groundwater at the Site. For testing purposes, the site was divided into two areas, one located in front of the pump islands, and the other near the oil water separator. To assess and monitor these areas, GES install additional observation wells and sparge wells. The feasibility testing activities conducted during the event were as follows:

- A soil vapor extraction (SVE) test at monitoring well MW-2;
- An air sparge/SVE (AS/SVE) test at monitoring well MW-2 and air sparge well SP-1;
- A SVE test at monitoring well MW-3;
- A SVE test at monitoring well MW-1; and
- An AS/SVE test at monitoring well MW-1 and air sparge well SP-2.

Pilot testing activities indicated that relatively permeable soil conditions exist in the vadose zone at the Site. Based on the site characterization and feasibility testing, GES recommended implementation of a SVE system for the areas around MW-2 and MW-3. According to GES, the SVE system would address the vadose zone impacts above the water table, but would have limited influence in the saturated zone and therefore suggested that additional technologies may need to be evaluated to address the groundwater impacts.

**CHEMTECH Laboratory Data Package, June 14, 2006**

ELM reviewed a data package prepared by CHEMTECH Laboratory dated June 14, 2006 as part of their Phase I ESA. The data package is included in Appendix J. According to ELM, Mr. Orszeulik indicated that the Basement-Groundwater sample results in the package were related to a sample collected from within the abandoned sewer pump station located east of the corrugated metal garage building. The analytical data was compared to NYS DEC Technical and Operational Guidance Series (TOGS) Class GA Drinking water Guidance Values and Standards. The comparison indicated exceedances of VOCs (i.e., MTBE, BTEX and naphthalene) and chloride.

Also included in the CHEMTECH data package was a page summarizing laboratory analysis of two soil samples entitled “Soil Analytical Results, City of New Rochelle, City Yard – Basement”. According to the ELM report, the samples were also collected from within the abandoned sewer pump station located east of the corrugated metal building. The data appeared to have been compared to NYS DEC TAGM RSCOs, although comparison criteria were not specified on the table. The data presented in the tables indicated several VOCs and SVOC exceeding the TAGM RSCOs.
Preliminary Geotechnical Report, Echo Bay Project, Mueser Rutledge, Consulting Engineers, April 3, 2007

Mueser Rutledge Consulting Engineers (MRCE) conducted a preliminary subsurface investigation at the Site between February 12 and February 21, 2008. A summary interpretation of the subsurface conditions encountered during the investigation and preliminary recommendations for future foundation design are provided in the report dated April 3, 2007, which is included herein as Appendix J. The work performed as part of the investigation included:

- Installation of seven borings to approximately 10 feet into bedrock;
- Collection of soil samples for field and laboratory classification;
- Collection of rock core samples. The cores were logged, jointing patterns were sketched, recovery measured and the Rock Quality Designation calculated; and
- Installation of observation wells to determine groundwater level.

The soil and rock strata encountered in the order of their occurrence with depth include: fill, loose sand, medium compact to very compact sand, decomposed rock, weathered rock and bedrock. Groundwater levels, as observed in the observation wells ranged from 8 to 10 ft-bls.

Environmental Management Solutions, Inc. (EMS) prepared a Subsurface Investigative Work Plan, related to Spill Nos. 98-00763 & 01-013007, for the City of New Rochelle Department of Public Works on August 27, 2007. The Work Plan was required by the New York State Department of Environmental Conservation (NYSDEC) in a letter dated March 9, 2007 following evaluation of the a Limited Subsurface Investigation Report (also by EMS). A summary of historical incidents and investigations performed at Site was provided in The Site History & Chronology of Work Performed section as follows:

- Reportedly there have been at least six spill events historically assigned to the Site of which the NYSDEC and/or the Westchester County Department of Health were notified.
- Gasoline and diesel USTs, previously located off the northwest corner of the automotive repair garage, were removed during 1998 and 2001, respectively.
• A waste oil UST, previously located off the northeast corner of the automotive repair garage was removed during 2002.

• During 2003, Schoor DePalma installed four additional groundwater monitoring wells to further delineate the plume migration.

• During June 2006, EMS conducted a Limited Subsurface Investigation in the area of two removed 1,000-gallon gasoline USTs. The investigation was initiated to obtain a more comprehensive understanding of soil and groundwater contamination in the area of the tanks. Analytical results of soil and groundwater samples documented significant petroleum contamination.

• On May 8 and 14, 2007, EMS collected groundwater samples from all monitoring wells on site.

• A basement of a former pump station, located in front of the automotive repair garage toward the west has been a suspect source of VOC contamination in the groundwater. During July 2007, the former basement pump station was reportedly pumped free of groundwater into a carbon filtration system and approximately 1,000 tons of petroleum-contaminated rock/soil mixture was removed from the basement enclosure. The space was backfilled with clean crushed rock. An eighteen-inch diameter pipe was installed for treating and monitoring purposes.

The August 27, 2007 work plan proposed installation of borings and monitoring wells to further delineate the VOC contamination in the groundwater beneath the property.
4.0 SITE HISTORY
The historical uses of the Site are discussed below.

4.1 Historical Site and Surrounding Property Usage
The historical uses of the Site and surrounding properties were researched by examining historical Sanborn fire insurance maps dated 1911, 1931, 1942, 1951, 1990 to 1996, and 2003 (Appendix C); historical aerial photographs dated 1954, 1966, 1974, 1984, 1989, 1994, and 2006 (Appendix D); historical topographic maps dated 1897, 1947, 1956, 1966, 1979, and 1995 (Appendix E); an EDR city directory search (Appendix G); an interview conducted with the owner’s representative and key Site Manager; and documentation from the City of New Rochelle Bureau of Buildings, Department of Public Works and Department of Finance.

According to the sources listed above, the Site was improved as early as 1911 with a small boat yard and two detached residential homes. In 1917, the City of New Rochelle assumed ownership and the Department of Public Works occupancy of the Site began, at which time the aforementioned boat yard had been demolished and several of the still existing northernmost buildings were constructed (see Section 3.1). A sewage disposal plant was subsequently constructed onsite, which started operating in 1926, and continued operating until circa 1955, when the existing neighboring New Rochelle sewage disposal plant started operations. Westchester County sewer easements and conveyances were routed through the Site in connection with the onsite sewage disposal plant, including emergency sewage overflow bypasses with outfalls into Echo Bay. The post-treatment outfall of the sewage disposal plant was further south into Echo Bay or Long Island Sound. The onsite sewage disposal plant was razed circa 1969, at the time the existing vehicle repair garage was constructed in the southernmost region of the Site. The two aforementioned residential homes were razed prior to 1951.

Several building were constructed between 1917 (northernmost buildings) and 1969 (vehicle repair garage), and had uses including office space; equipment, parts and fleet vehicle storage; vehicle repair within various onsite buildings; and sewage disposal.
4.2 Historic Sanborn Fire Insurance Maps

Roux Associates reviewed historical Sanborn fire insurance maps for the Site and immediate surrounding properties (Appendix C). The following is a summary of the Site from 1911 to 2003, as determined from the historical Sanborn fire insurance maps:

<table>
<thead>
<tr>
<th>Map Year</th>
<th>Site</th>
<th>North</th>
<th>East</th>
<th>South</th>
<th>West</th>
</tr>
</thead>
<tbody>
<tr>
<td>1911</td>
<td>Improved with a small boat shop and ancillary structure (Stronbergs boat yard) along Echo Bay in the northeast region of the Site. Two single-family-like residential dwellings in the central and southern regions of the Site. The Site boundary along Echo Bay appears further inland than presently.</td>
<td>Main Street followed further north by detached and contiguous single-family-like residential dwellings.</td>
<td>One vacant one-story building adjoining along Main Street.</td>
<td>Echo Bay.</td>
<td>Several small structures including a tool house, boat builder and residential dwellings.</td>
</tr>
<tr>
<td>1931</td>
<td>Improved with several contiguous buildings that form an L-shape consistent with the existing building configuration. The Department of Public Works – Bureau of Street is labeled as the occupant. The buildings are labeled office, storage, heater, auto/trucks, tools, and street cleaning machinery. A building labeled compost, and a building labeled sewage disposal plant were located to the south of the L-shaped string of buildings. Stronbergs boat yard was no longer depicted onsite.</td>
<td>A garage with two buried gasoline tanks, a machine shop, and contiguous unspecified stores were depicted along Main Street.</td>
<td>Two eastern adjoining auto repair shops, followed by a dining car manufacturing plant.</td>
<td>Echo Bay.</td>
<td>The roadway known as Huntington Place was constructed. One gasoline station and one service station, both with several buried gasoline tanks, were depicted along Main Street.</td>
</tr>
<tr>
<td>1942</td>
<td>An apparent sewer easement is depicted from Main Street to Echo Bay, and routed near the onsite sewer plant. The southeastern Site boundary along Echo Bay appeared expanded and linear, as if bulkheaded.</td>
<td>Land use not indicated on map. No significant changes noted in structures present on the 1931 Sanborn map.</td>
<td>Land use not indicated on map. No significant changes noted in structures present on the 1931 Sanborn map.</td>
<td>Echo Bay.</td>
<td>Improved with the Naval Militia Armory and 6 small ancillary buildings</td>
</tr>
<tr>
<td>1951</td>
<td>The structures at the southernmost end of the L-shaped string of contiguous buildings appeared replaced with new structures used for storage and a police garage. Auto repair was depicted in the building adjacent to the police garage. The existing vehicle storage building was constructed, and labeled municipal garage. The two single-family-like residential dwellings were no longer depicted on the Sanborn map.</td>
<td>The former garage across Main Street was labeled filling station, including two buried gasoline tanks.</td>
<td>The former dining car manufacturing plant was labeled auto sales and service.</td>
<td>Echo Bay.</td>
<td>The 6 small ancillary buildings were no longer depicted, and two existing buildings had been constructed: one small ancillary building adjacent to the south of the drill shed, and a larger building just south of the administrative building, labeled “class rooms.” The gasoline station further west was depicted as a restaurant and an auto repair shop.</td>
</tr>
<tr>
<td>Site and Surrounding Property Usage</td>
<td></td>
<td></td>

</tbody>
</table>

Roux Associates identified the historic onsite uses including sewage disposal and auto repair, as well as the historic auto repair and gas station uses with several gasoline USTs in the immediate area surrounding the Site as environmental concerns in connection with the Site from the review of historic Sanborn fire insurance maps.

### 4.3 Historic Aerial Photographs
Aerial photographs were obtained from EDR for the years 1954, 1966, 1974, 1984, 1989, 1994, and 2006 are presented in Appendix D. The following is a summary of the Site and surrounding property usage, as determined from the aerial photograph review. Changes observed on the aerial photographs were consistent with those noted on corresponding historical Sanborn fire insurance maps.

<table>
<thead>
<tr>
<th>Year</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1954</td>
<td>The Site and immediate surrounding area appear covered with structures similar to those depicted on the 1951 Sanborn map. The New Rochelle Wastewater Treatment Plant appears to the east of the Site, across Echo Bay.</td>
</tr>
<tr>
<td>1966</td>
<td>The Site and immediate surrounding area appear consistent with the structures and features visible on the 1954 aerial photograph.</td>
</tr>
<tr>
<td>1974</td>
<td>The Site and surrounding area appear to be consistent with the development depicted on the 1990 Sanborn Map, with the exception of the former building labeled “compost” on Sanborn maps still being visible. The eastern Site border appeared expanded eastward into Echo Bay.</td>
</tr>
<tr>
<td>1984</td>
<td>The Site and immediate surrounding area appear to be consistent with the development depicted on the 1990 Sanborn Map.</td>
</tr>
<tr>
<td>Year</td>
<td>Description</td>
</tr>
<tr>
<td>------</td>
<td>-------------</td>
</tr>
<tr>
<td>1989</td>
<td>The Site and immediate surrounding area appear to be consistent with the development depicted on the 1990 Sanborn Map.</td>
</tr>
<tr>
<td>1994</td>
<td>The Site and immediate surrounding area appear to be consistent with the development depicted on the 1994 Sanborn Map.</td>
</tr>
<tr>
<td>2006</td>
<td>The Site and surrounding area appear to be consistent with the development depicted on the 2003 Sanborn Map and appear comparable to current conditions.</td>
</tr>
</tbody>
</table>

Roux Associates did not identify sources of environmental concerns at the Site and in the immediate area surrounding the Site beyond those incorporated by reference to Sanborn maps, from the review of historic aerial photographs.

### 4.4 Historic Topographic Maps

Historic topographic maps of the Site were obtained from EDR for the years dated 1897, 1947, 1956, 1966, 1979, and 1995, and are presented in Appendix E. These maps corroborate the reported general development of the area around the Site, as documented in the aerial photographs and Sanborn maps.

The topographic map dated 1897, pre-dating the earliest available Sanborn map dated 1911, depicted mostly vacant land, with possibly one small unidentified structure, and an Echo Bay that appeared much wider and reaching further inland than in its current configuration.

These maps did not indicate any environmentally significant topographical features such as wetlands or environmentally significant Site uses such as landfills on or adjacent to the Site. The narrowing of Echo Bay at the Site between 1897 and 1947 appears to indicate filling operations in connection with made land.

Roux Associates identified the potential historic filling operations along Echo Bay as an environmental concern in connection with the Site from the review of historic topographic maps.
4.5 Lien Search and Activity Use Limitations
EDR performed an environmental lien search and search for recorded activity use limitations (AULs). No recorded environmental liens or AULs were found. Documentation concerning this request is included in Appendix F.

4.6 City Directory Search
City directories list the resident’s name, street address, and sometimes even the resident’s occupation for a given year. They also frequently contain similar information about commercial and business establishments, thus providing specific names and addresses of commercial or business establishments over time. City directories allow a researcher to build a history of a property and surrounding area over time, and may give an indication if an area has been occupied by an occupant that may have caused potential environmental problems at or near the Property.

A City Directory Abstract of the Site and surrounding area was obtained from EDR on June 27, 2012. Please refer to Table 4.1 and 4.2 for a summary of the City Directory Review findings and Appendix G for a copy of EDR City Directory Abstract.

Roux Associates identified the historic uses of the Site and neighboring properties listed in bold font in Tables 4.1 and 4.2 as environmental concerns from the summary of the City Directory Abstract.
5.0 RECORDS REVIEW

Roux Associates used a computerized environmental database and radius map report prepared by EDR to conduct a government records database search of properties of known and suspected environmental concern within specific radii of the Site. A total of 91 environmental databases were reviewed as part of this Phase I ESA. Appendix B contains a complete copy of the environmental database and radius map report. The Site was identified in the following five (5) environmental databases:

1) The NYSDEC Spills Information Database for releases associated with storage tanks (LTANKS database) and other types of incidents (NY SPILLS database). The following 10 spills were reported to NYSDEC:

- **Active Spill No. 10-11242** – According to database records, the spill occurred on 2/8/2011 due to tank test failure of a 5,000-gallon No. 2 fuel oil UST. The tank was removed on or about February 23, 2011, and a work plan for remedial work submitted to NYSDEC by the tank removal contractor. No additional information was provided in the EDR report regarding subsequent work. Additional details regarding this spill incident are provided in Section 5.16.

- **Active Spill Nos. 01-01307 and 98-00763** – According to database records, these spill incidents are treated as one spill incident by the NYSDEC. Spill No. 9800763 occurred on 4/17/1998 due to a tank test failure of a 2,000-gallon gasoline UST. This tank and additional USTs were reportedly removed from a gasoline tank area in April 1998. Spill No. 01-01307 occurred on 5/1/2001 when soil contaminated with gasoline was encountered during onsite intrusive work of unspecified nature. A spill investigation report was submitted to NYSDEC on 10/13/2002 that included the installation of six groundwater monitoring wells and the recommendation to perform a pilot study for a suitable remediation technology. A soil vapor extraction/air sparge test was performed by November 2004. Both spills are currently active. No additional information was provided in the EDR report regarding remedial activities.

- **Closed Spill No. 04-08614** – According to database records, the spill occurred on 11/4/2004, when four (4) 1,000-gallon USTs were removed and one of these tanks, which contained motor oil, was identified with holes. According to the EDR report, the spill was scheduled for cleanup shortly after tank removal, and the Westchester County Department of Health recommended no further action.

A further subsurface investigation was requested by the NYSDEC in the area with former gasoline USTs, which was completed on 12/4/2006. The subsurface investigation identified “heavy contamination” in that area. On 3/9/2007, a work plan for the investigation of groundwater was requested by NYSDEC for the former tank area. No additional information was provided in the EDR report regarding this groundwater investigation or subsequent work under these two spill numbers.

- **Closed Spill No. 04-08614** – According to database records, the spill occurred on 11/4/2004, when four (4) 1,000-gallon USTs were removed and one of these tanks, which contained motor oil, was identified with holes. According to the EDR report, the spill was scheduled for cleanup shortly after tank removal, and the Westchester County Department of Health recommended no further action.
The spill cleanup met NYSDEC standards and was closed on 3/16/2005. Additional details regarding this spill incident are provided in Section 5.16.

- **Closed Spill No. 98-03810** – According to database records, the spill occurred on 6/19/1998 due to a tank test failure. An unknown amount of waste oil was released from an UST (unknown size). According to the EDR report, the tank was removed on or about April 23, 2002, and a tank closure report submitted shortly thereafter. The spill cleanup did not meet NYSDEC standards and was closed on 9/22/2003.

- **Closed Spill No. 97-13578** – According to database records, the spill occurred on 3/6/1998 due to a tank test failure by a 2,000-gallon No. 2 fuel oil UST. According to the EDR report, the spill was cross-referenced to Spill No. 01-01307 and closed on 5/14/2005.

- **Closed Spill No. 97-13423** – According to the database records, the spill occurred on 3/4/1998, when unknown petroleum product seeped into Long Island Sound from an embankment at the Site. The spill cleanup met NYSDEC standards and was closed on 5/4/1998.

- **Closed Spill No. 97-12899** – According to database records, the spill occurred on 2/19/1998 due to a tank truck overfilling a diesel UST of unspecified capacity. Approximately 10 gallons of diesel fuel was released. According to the EDR report, the spill was remediated to the satisfaction of NYSDEC and closed on 2/19/1998.

- **Closed Spill No. 92-06991** – According to database records, the spill occurred on 9/17/1992 due to a line test failure of a gasoline UST of unspecified capacity. Approximately 50 gallons of gasoline was released and five cubic yards of soil were excavated and disposed offsite. The spill cleanup did not meet NYSDEC standards and was closed on 2/5/1993.

- **Closed Spill No. 91-02890** – According to database records, the spill occurred on 6/13/1991, when gasoline-like fumes where reported onsite. According to the EDR report, the gasoline fumes likely originated from a gasoline station across the street from the Site and were cause by a tank overfill. The spill cleanup did not meet NYSDEC standards and was closed on 9/3/1991.

2) The Resource Conservation and Recovery Act (RCRA) non-generator database. A RCRA non-generator does not presently generate hazardous waste, but generated hazardous waste at some point in the past. According to the EDR report, the New Rochelle City Yard was listed as a Conditionally Exempt Small Quantity Generator of hazardous waste in 1997 (EPA ID NYR000037168), with no notices of violations or enforcement actions. By 2006, the Site was classified as a non-generator of hazardous waste by the EPA.

3) The U.S. Brownfields database. Brownfields are defined by the EPA as real property, the expansion, redevelopment, or reuse of which may be complicated by the presence
or potential presence of a hazardous substance, pollutant, or contaminant. According to the EDR report, the Site was an EPA grant recipient for a Targeted Brownfields Assessment (TBA) that consisted solely of an assessment in the form of a Phase I ESA. According to the information obtained online from EPA, the assessment was completed on March 1, 2003. This assessment apparently corresponds to the document titled “Background Memoranda for New Rochelle Sites” prepared by Foster Wheeler in March 2003 (see Section 3.4).

4) The EPA Facility Index System (FINDS). The FINDS database is a registry for other environmental databases that contain more details about the Site. The Site was listed for activity in the following programs:
- Regulated hazardous waste generator and subject to a TBA (Registry ID 110004533345);
- Assessment, Cleanup, and Redevelopment Exchange System (ACRES – Registry ID 110038740066), an online database for Brownfields grantees to electronically submit data to EPA, including for TBAs; and
- Regulated source of air emissions (Registry ID 110019610900). No further details were provided in the EDR report.

No further details were provided in the EDR report. Please see above for additional details on the Site in these environmental databases.

5) The EDR Underground Storage Tank (UST) database, for the maintenance of registered USTs under provisions of the NYSDEC Petroleum Bulk Storage (PBS) program. The following is a summary of tanks listed for the Site on the EDR UST database, as determined from information provided by the EDR report. Additional tank details, based on supplemental sources of information reviewed as part of the preparation of this document, are provided in a separate table in Section 6.3.

</table>

(1) Tank located above ground and servicing a fuel dispensing island.
(2) Suspected aboveground storage tank (see Section 6.3), but listed in the EDR UST database.

Properties identified in the state and federal databases within the search distance from the Site, include:

- One federal CERCLIS site with no further remedial action planned (NFRAP);
- One hazardous waste handling facility with corrective action activity (RCRA-CORRACTS);
- Four listings of conditionally exempt small quantity generators of hazardous waste (CESQGs);
- 18 facilities that currently no longer generate hazardous waste (RCRA-NonGen);
- One state superfund site (SHWS);
- Two Solid Waste Facilities/Landfills (SWF/LFs);
- 82 leaking storage tank incidents;
- 23 properties with registered USTs;
- Nine properties with registered ASTs;
- One chemical bulk storage (CBS) facility;
- One facility enrolled in the New York Voluntary Cleanup Program (VCP);
- Two facilities enrolled in the New York Brownfield Cleanup Program (BCP);
- Two U.S. Brownfields sites;
- 45 NYSDEC spill sites;
- Two drycleaner operators; and
- One Manufactured Gas Plant (MGP) site.

Offsite properties that meet the criteria presented below are discussed in this report:

- Facilities located immediately adjacent to the Site are examined due to their close proximity to the Site and the potential for surface water discharges (e.g., stormwater runoff, surface water effluent discharges) to enter the Subject Site or through the migration of groundwater.

- Facilities located topographically or hydraulically upgradient to the Site.

For the purposes of this assessment, groundwater has been assumed to flow southeasterly toward Echo Bay. Facilities that are located downgradient or cross-gradient to the Site but not immediately adjacent to the Site are not generally discussed in this report as these sites are considered to pose a low potential environmental concern to the Site. In addition, certain facilities that may be hydraulically upgradient but involve conditions that are considered de minimis (i.e., small quantities of releases, contained releases, or releases that are cleaned up in such a manner that does not pose a threat to human health or the environment) are not generally discussed in this report unless further clarification was warranted to rule out the potential for these properties to impact the Site.
5.1 USEPA CERCLIS – No Further Remedial Action Planned
The EDR report identified one CERCLIS – No Further Remedial Action Planned (CERCLIS – NFRAP) site within the searched radius. A CERCLIS – NFRAP site is a facility that the USEPA previously investigated due to a release or threat of a release of hazardous substances pursuant to the Superfund Act of 1980. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site), it is unlikely that this CERCLIS-NFRAP would represent an environmental concern in connection with the Site.

5.2 USEPA Hazardous Waste Facility with Corrective Action Activity
The EDR report identified one hazardous waste facility with corrective action activity. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site), this facility does not represent an environmental concern in connection with the Site.

5.3 Conditionally Exempt Small Quantity Generators (CESQG) of Hazardous Waste
The EDR report identified four CESQGs of hazardous waste within the searched radius. A CESQG of hazardous waste generates less than 100 kilograms (220 pounds) of hazardous waste, or less than 1 kilogram (2.2 pounds) of acutely hazardous waste per month. Based on the information contained in the EDR report (i.e., proximity to the Site, hydraulically upgradient location with respect to the Site, historic generation of hazardous waste), only the following listed CESQG represents an environmental concern with respect to the Site:

   Elite Cleaners (EPA Generator ID NYD987024346), located at 235 Main Street and neighboring the Site to the north, across Main Street, was identified as a CESQG of hazardous waste by 2006. The facility was identified as a Small Quantity Generator of hazardous waste in 1995. According to the EDR report, the facility generated spent halogenated solvent waste in years ranging from 1993 to 2003. No violations are noted in the EDR report.

5.4 RCRA – Non-Generators
The EDR report identified 18 RCRA non-generators of hazardous waste within the searched radius. A RCRA non-generator does not presently generate hazardous waste, but generated hazardous waste at some point in the past. Based on the information contained in the EDR report (i.e., distance of less than 0.125 from the Site, hydraulically upgradient location with
respect to the Site, past generator of hazardous waste), only the following listed RCRA non-generator facility represents an environmental concern with respect to the Site.

**J&M Auto Works Ltd.,** located at 214 Main Street, and adjoining the Site to the east, was identified as a SQG in 1986 and a CESQG in 2006. According to the EDR report, the facility generated spent halogenated solvents. No violations were noted.

5.5 State Superfund Sites
The database identified one site in the inactive hazardous waste disposal remedial program (state superfund program). Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site), this state superfund site does not represent an environmental concern in connection with the Site.

5.6 Solid Waste Facilities/Landfill Facilities
The database identified two solid waste facilities/landfill facilities (SWF/LFs) within the searched radius. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site), none of these SWF/LFs represent an environmental concern in connection with the Site.

5.7 Leaking Storage Tanks/Historical Leaking Storage Tanks
The EDR report identified 82 properties within the searched radius as having leaking storage tanks. In addition, the EDR report identified 56 properties in the Historical Leaking Storage Tanks database within the searched radius. In 2002, the NYSDEC stopped entering information into this historical database and transferred all records to the Leaking Storage Tank Database; therefore, all properties included in this database are included in the current Leaking Storage Tank Database. The EDR report includes the historical database, which includes additional information to complement information provided in the current Leaking Storage Tank Database.

Due to the location and nature of the incidents at the offsite properties (i.e., quantity and nature of the release, properties’ distance, and/or upgradient hydraulic location relative to the Site), only the following property is in a location where documented or potential releases may impact subsurface environmental conditions at the Site:
**Naval Armory:** The leaking storage tank incident located at 270 Main Street, neighboring the Site to the west (NYSDEC Spill No. 0013171) involved a tank overfill resulting in the release of approximately 25 gallons of No. 2 fuel oil into a nearby stormwater sewer drain. Approximately 12 tons of soil were excavated and disposed offsite. The spill cleanup was closed on 3/9/2004 without meeting NYSDEC standards.

### 5.8 Registered Underground Storage Tanks / Historical Underground Storage Tanks

The database identified 23 properties within the searched radius with registered USTs under provisions of the NYSDEC Petroleum Bulk Storage (PBS) program. In 2002, the NYSDEC stopped entering information into this historical UST database and transferred all records to the current Registered UST database; therefore, all properties included in the historical UST database are included in the current UST database. The EDR report includes the historical database, which contains additional information to complement information provided by the current UST database. The EDR report did not identify any property in the Historical Underground Storage Tanks database within the searched radius.

Based on the information contained in the database (i.e., quantities and nature of the UST contents, properties’ distance of less than 0.25 miles from the Site, and/or upgradient hydraulic location relative to the Site), the following property is in a location where a release from the storage tank(s) could potentially impact subsurface environmental conditions at the Site:

<table>
<thead>
<tr>
<th>Facility Name</th>
<th>Address</th>
<th>Storage Tanks and Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>City of New Rochelle (Former Armory)</td>
<td>270 Main Street</td>
<td>One (1) 7,500-gallon UST containing unspecified product was administratively closed on 4/6/2004. This tank was also registered as an AST (see Section 5.9), and removed on 4/10/2009.</td>
</tr>
</tbody>
</table>

### 5.9 Aboveground Storage Tank Database

This database includes registered active ASTs under the jurisdiction of the NYSDEC PBS Program. Nine properties within the searched radius were identified with registered ASTs. Based on the information contained in the database (i.e., quantities and nature of the AST contents, properties’ distance of less than 0.25 miles from the Site, and/or upgradient hydraulic location relative to the Site), the following property is in a location where a release from the storage tank(s) could potentially impact subsurface environmental conditions at the Site:
hydraulic location relative to the Site), the following properties have active ASTs and are in a location where a release from the storage tanks could potentially impact subsurface environmental conditions at the Site:

<table>
<thead>
<tr>
<th>Facility Name</th>
<th>Address</th>
<th>Storage Tanks</th>
</tr>
</thead>
<tbody>
<tr>
<td>City of New Rochelle</td>
<td>270 Main St.</td>
<td>7,500-gallon AST containing unspecified product, removed on 4/10/2009.</td>
</tr>
<tr>
<td>(Former Armory)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

5.10 Chemical Bulk Storage Underground Storage Tanks/Aboveground Storage Tanks
This database includes facilities that are registered as storing hazardous substances in ASTs of 185 gallons or greater and/or in chemical USTs of any size. According to the EDR report, one property listed in this database was identified within the searched radius. Based on the information contained in the database (i.e., nature of the AST contents, hydraulic location and distance to the Site), the listed property is not likely to represent an environmental concern in connection with the Site.

5.11 Voluntary Cleanup Program and Brownfield Cleanup Program Sites
The Voluntary Cleanup Program (VCP), superseded by the Brownfield Cleanup Program (BCP), organize the environmental cleanup and remediation for industrial or commercial properties that have been deemed to be contaminated by petroleum products and/or hazardous substances. Certain limitations on liability and incentives are awarded to developers and/or owners of these sites in order to promote development and expedite remediation. The EDR report identified one property in the VCP and two properties in the BCP, within the searched radius. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site), the listed properties are not likely to represent an environmental concern in connection with the Site.

5.12 U.S. Brownfields
Brownfields are defined by the EPA as real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Based on the information contained in the EDR report
(i.e., distance from the Site, hydraulic location with respect to the Site), the following property represents an environmental concern in connection with the Site:

**City Armory** – New Rochelle, located at 270 Main Street, neighboring the Site to the west, was an EPA grant recipient for a Targeted Brownfields Assessment (TBA) that consisted solely of an assessment in the form of a Phase I ESA. No additional pertinent details were provided in the EDR report.

### 5.13 Spill Sites Database

The EDR report identified 45 spill incidents within the searched radius. Based on the information contained in the database (i.e., quantities and nature of the spills, properties’ distance of less than 0.125 miles from the Site, and/or upgradient hydraulic location relative to the Site), the following properties are in a location where spill incidents could potentially impact subsurface environmental conditions at the Site:

**Supreme Dance Studio**, located at 255 Main Street. The two spill incidents (NYSDEC Spill# 0211418 and 0707825) involved the following:

- **Spill No. 0211418**: The spill incident was reported on 2/15/2003 and involved the spillage of No. 2 fuel oil during delivery. The spill cleanup met NYSDEC standards and was closed on 10/27/2003.

- **Spill No. 0707825**: The spill incident was reported on 10/17/2007 and involved the release of approximately 550 gallons of No. 2 fuel oil in the basement, which in part entered the sewer system. The spill cleanup met NYSDEC standards and was closed on 10/2/2008.

**Esposito and Gouvea Residences**, located at 26 and 28 Pratt Street, respectively (NYSDEC Spill Nos. Spill # 0903297 and 0903415, respectively), involved the release of #2 fuel oil in the basement. The cause of release was likely due to a “leaky” oil line at 28 Pratt Street. According to the EDR report, fuel oil was found in two sumps of the basement at 26 Pratt Street and was being pumped out of both sides of the house. Several pits were dug and impacted soil and separate phase product were removed from the basements. The spill is currently open.

**Aznaran Residence**, located at 36 Pratt Street (NYSDEC Spill # 1107155) involved the No. 2 fuel oil atop water in the basement. The source of the oil was suspected to be offsite, since no oil was stored onsite. An investigation is ongoing and the spill remains open.

### 5.14 Drycleaner Facilities

The EDR report identified two drycleaner facilities within the searched radius. Based on the information contained in the database (i.e., quantities and nature of the spills, properties’
distance of less than 0.125 miles from the Site, and/or upgradient hydraulic location relative to the Site), the following property is in a location where spill incidents could potentially impact subsurface environmental conditions at the Site:

**Elite/W&J Cleaners**, located at 235 Main Street. According to the EDR report, the facility uses tetrachloroethene and is listed as a generator of hazardous waste including spent halogenated solvents (see Section 5.3).

### 5.15 Manufactured Gas Plant Facilities

According to the EDR report, one Manufactured Gas Plant (MGP) facility was identified within the searched radius. Based on the information contained in the EDR report (i.e., distance from the Site, hydraulic location with respect to the Site), this MGP site is not likely to represent an environmental concern in connection with the Site.

### 5.16 Freedom of Information Law Letter Responses

On June 22, 2012, Freedom of Information Law (FOIL) letters were submitted to the USEPA, NYSDEC, WCDOH, and the City of New Rochelle. Records were reviewed on July 12, 2012, at the City of New Rochelle Bureau of Buildings, Fire Department, and Department of Public Works. Records have been received from the WCDOH. Responses have been received from only certain Divisions within the USEPA and a partial response has been obtained from the NYSDEC at the time of issuance of this report. If any additional pertinent environmental information is received from any of these agencies following the issuance of this report, Roux Associates will provide a letter addendum to this report detailing this information. Information obtained from the FOIL responses is included as Appendix I, and summarized below.

**USEPA**

A partial response (i.e., additional Divisions within these agencies may respond at a later time) was obtained from the USEPA. The USEPA responded that the Site is not on the CERCLIS or CERCLIS-NFRAP lists.

**NYSDEC**

The NYSDEC Spill Report Forms were obtained for the spills reported at the Site. These forms contain summary information regarding the spill incident which is also the information
obtained from the EDR report. Please refer to Section 5.0 for details regarding these spill incidents. The NYSDEC also forwarded the request for records from Roux Associates to the NYSDEC Spill Prevention and Response Program and the Division of Air Resources. A response from the case manager for additional records concerning the spill incidents is pending. A response was obtained from the Division of Air Resources, and is summarized below.

The documents made available by the NYSDEC Division of Air Resources consisted of an application dated 1/13/1993 to operate a Stage 2 vapor recovery system in connection with the onsite operation of two gasoline USTs, each with a 2,000-gallon capacity. The USTs were reportedly installed in 1969.

**WCDOH**

The WCDOH provided documentation on the removal of one (1) 5,000-gallon No. 2 fuel oil UST, four (4) 1,000-gallon motor oil USTs, and one (1) 5,000-gallon diesel UST. All tanks were of steel construction, together with associated tank registration information. This information is also integrated in the section of this report discussing onsite storage tanks (Section 6.3).

The 5,000-gallon No. 2 fuel oil UST was removed on February 23, 2011 and had leaked, with free product noted in the excavation and water in the tank. On March 2, 2011, the WCDOH inspector observed the excavation, which was filled with free product atop water. Free product was also present in nearby monitoring wells. The free product was being pumped out from the excavation and wells using a vacuum truck. The WCDOH inspector recommended additional excavation and pumping, together with the submission of a remedial work plan. Spill Number 10-11242 was opened on February 8, 2011, with the NYSDEC due to the tightness test failure of this tank (see Section 5.0). No additional remedial activities were reported, and the spill is active.

The four motor oil USTs (Tank IDs MG002 through MG005) were located outdoors, fronting the northernmost bay of the vehicle repair garage and were removed by Jade Environmental, Inc. on November 8, 2004. The key Site manager also reported the location of four removed
motor oil USTs at that location. Spill Number 04-08614 was opened with the NYSDEC (see Section 5.0). Approximately 125 tons of petroleum contaminated soil were excavated and disposed offsite. The NYSDEC spill was closed on 3/16/2005. It should be noted that drawings obtained from the Bureau of Buildings (discussed below) depict four (4) 1,000-gallon motor oil USTs inside the vehicle repair garage. These drawings were part of an application for the construction of same building. It appears that these four motor oil USTs were installed outdoors rather than indoors during actual construction of the building.

The removal of one (1) 5,000-gallon diesel UST was conducted on October 11, 2001, for which a closure report dated December 19, 2001 was submitted by Ira D. Conklin & Sons. The tank was in poor condition, with pitting and corrosion. Approximately 68 tons of contaminated soil was excavated and disposed offsite. The soil sampling results were considered acceptable by the WCDOH, which required no further action regarding the work performed. Spill Number 01-01431 was reportedly opened with the NYSDEC; however, this spill number corresponds to another property and spill incident, located at a private residence in Yorktown, Westchester County, according the NYSDEC database.

City of New Rochelle – Bureau of Buildings
The documents available for the Site were provided by Deputy Commissioner Paul Vacca. These documents included the building cards, which summarize the permits and certificates of occupancy issued at a property; a hardcopy file for new building permit No. 36006; and a set of drawings dated 9/16/1968 associated with said permit.

Additional permits and a certificate of occupancy were listed on the building cards, for which, according to Deputy Commissioner Vacca, no records are available. The additional permits include a permit for various buildings dated 1917 which, according to same, is the date at which the City of New Rochelle assumed ownership of the Site, and constructed structures that include some of the buildings in the L-shaped string of buildings in the northern half of the Site (Figure 2).

Permit No. 36006, dated 11/21/1968, was issued for the construction of the existing vehicle repair garage in the southwestern region of the Site. A No. 4 fuel oil burner was installed in
the building. According to the drawings associated with the permit, the burner was fueled by a 5,000-gallon fuel oil UST located outdoors, just north of the building. This tank was removed in February 2011 (see above) and replaced with an existing 3,000-gallon fuel oil AST located along the south wall exterior of the vehicle storage garage (Figure 2).

The set of drawings associated with building permit 36006 was dated 9/16/1968 and depicted the following pertinent environmental features:

- A historic building labeled “sewage disposal plant” located to the southeast of the vehicle storage garage with transformers (Figure 2). The building and transformers were scheduled for demolition after 1/1/1969.
- Sewer influent, effluent and overflow lines in connection with the sewage disposal plant.
- The proposed installation of a wastewater discharge pipe into Echo Bay, routed southward from the southeast corner of the building. All trench drains and floor drains were routed into this outlet. Currently, according to the key Site manager, these are routed into an oil/water separator and the subsequent wastewater discharge into the onsite sewer system.
- An auto and a truck repair area with motorcycle, auto and truck hydraulic lifts, a machine shop and a washing/painting room.
- Four (4) 1,000-gallon motor oil USTs proposed for installation within the building.
- One (1) 5,000-gallon fuel oil UST, one (1) 5,000-gallon diesel UST and two (2) 2,000-gallon gasoline USTs proposed for installation between the proposed building and the existing vehicle storage building. The diesel and gasoline USTs were proposed to service the existing fuel dispensers.
- One (1) 3,000-gallon waste oil UST proposed for installation outdoors, off the southeast corner of the building.
- A stone sea wall located further inland as compared to the present location of the Site boundary along Echo Bay.
- Sanitary waste connection to the existing sanitary sewer system. According to the key Site manager, sanitary waste is discharged to the municipal sewer system.
- An outdoor transformer off the northwest corner of the building, at the location of the existing transformer.
The information obtained for storage tanks is also integrated in the section of this report discussing such tanks (Section 6.3) and additional features listed above are depicted on Figure 2.

City of New Rochelle – Department of Public Works

The documents available for the Site were provided by Deputy Commissioner John Clemente. These documents included the previous environmental investigation produced until 2007, as summarized in Section 3.4, as well as four historic drawings of the Site (Appendix J), summarized below.

- **Drawing titled City Yard Topo and Elevations**, dated 12/14/1972. The drawing depicts the existing vehicle repair garage, and no longer depicted the historic sewage disposal plant. Sanitary waste conveyances associated with the former sewage disposal plant are still depicted, and apparently used for sewer overflow purposes, with discharge into Echo Bay. Two stormwater catch basins were depicted, one located at or near the current location of a catch basin next to the existing washdown station. The catch basins are routed for discharge into Echo Bay. A kerosene storage tank was located near the current washdown station, but was not observed during Site reconnaissance. Wastewater from the Vehicle repair garage drained into Echo Bay, to the south of that building.

- **Drawing titled Existing City Yard County Owned Property and Underground Utilities**, dated 3/12/1963. The drawing depicts county owned property and easement, together with the remaining onsite buildings. The county owned property includes the former sewage disposal plant and adjoining paved area. The county owned easements consist of influent, discharge and overflow sewer easements. The drawing also depicts usage as repair shops of the traffic and sanitation garages at the southern end of the L-shaped string of buildings (Figure 2). The existing vehicle storage garage is labeled municipal garage. According to the key Site manager, this building was used for vehicle repair prior to the construction of the existing vehicle repair garage. The drawing also depicts a stone sea wall along Echo Bay, which was no longer present on the 1972 drawing, above, where the Site appeared expanded into Echo Bay, beyond the stone sea wall.

- **Drawing titled Topo Layout City Yard**, dated 12/1/1947. The drawing depicts the historic sewage disposal plant, associated transformers, the aforementioned municipal garage building, a wash stand, repair shop and an oil tanks and boiler room (at the location of the boiler room depicted in Figure 2).

- **Drawing titled City Yard – Sewage Disposal Plant Proposed Emergency Bypasses**, dated 2/24/1937. The drawing depicted the historic sewage disposal plant, an existing influent line from Hudson Park (south of Echo Bay) and Stephenson (north of Main Street), an outfall line into Echo Bay, over one mile from the Site. The drawing also depicted emergency overflow bypasses with outfalls into Echo Bay along the Site.
City of New Rochelle – Department of Finance
The Bureau of assessments made available copies of the Field and Record Book for Land and Improvement for the Site, which document the construction material, size, use, and construction date of onsite buildings, together with their assessed value. This information has been summarized in Section 3.1.

City of New Rochelle – Fire Department
The Fire Department reported that all underground storage tanks had been removed from the property and provided a list of existing above ground storage tanks (ASTs). These ASTs are summarized in Section 6.3.

Roux Associates identified historic and current vehicle repair activities, the historic sewage disposal plant, and historic fill placement as environmental concerns in connection with the Site from review of records obtained to date through the Freedom of Information Law.
6.0 SITE RECONNAISSANCE
The findings of the Site reconnaissance conducted on July 10, 2012 are discussed below. At the time of Site reconnaissance, the Site was occupied by the City of New Rochelle Department of Public Works for use as office space, the parking, maintenance and repair of fleet vehicles, the washdown of street-sweeping vehicles, equipment storage, outdoor road salt storage, and a recycling yard.

6.1 Utilities
The Site is located within the New Rochelle Sewer District administered by Westchester County and is equipped with sewer conveyances. Please see Section 6.8 for additional details. Electrical service is supplied to the Site by Con Edison Corporation of New York. Potable water at the Site and in the area of the Site is provided by United Water New Rochelle. Onsite heating equipment, where present, is fueled with heating oil.

6.2 Hazardous Substances
Vehicle Repair Garage
One (1) 475-gallon motor oil AST, one (1) 475-gallon hydraulic oil AST and one (1) 475-gallon automatic transmission fluid AST were located next to the parts room, close to the northernmost of four bay doors. The tanks appeared in good condition, with de minimis staining observed on the concrete floor underneath the tanks. The concrete floor at this location appeared in good condition, with no significant cracks or other structural compromise.

One (1) 275-gallon antifreeze AST was located nearby, and south of, the aforementioned three 475-gallon ASTs. One (1) 550-gallon waste oil AST was located to the south of the antifreeze AST, along the southern wall and near the southernmost of four bay doors. Staining was observed on the concrete floor beneath these two ASTs. The concrete floor at these locations appeared in good condition, with no significant cracks or other structural compromise. The nearby trench drain is conveyed to an oil/water separator with final discharge into the municipal sewer system.
Five (5) 55-gallon steel drums of gear oil, two (2) 55-gallon plastic drums of diesel exhaust fluid (DEF), one (1) 55-gallon steel drum of windshield wash premix, and approximately 20 pails of diesel additive, gear oil and other lubricants were staged on the concrete floor of the former vehicle wash and paint room, located in the northeast corner of the building. Staining was observed on the concrete floor beneath the drums. The concrete floor at this location appeared in good condition, with no significant cracks or other structural compromise.

Workspace with retail-sized containers of products typically used for automotive maintenance, including one-quart oil bottles, spray cans of paint, one-pint bottles of fuel additives, lined the western wall, where police vehicles are repaired. The concrete floor exhibited *de minimis* staining at that location and appeared in good condition, with no significant cracks or other structural compromise.

Hydraulic oil that potentially contained PCBs was also used onsite (please see Section 6.4).

**Chemical Storage Addition**

A small concrete block and wood building addition at the eastern exterior wall of the existing stock room (Location D on Figure 2) is used for the storage of multiple pails and retail-sized cans including paint, paint cleaner, mortar, flashing, one (1) 20-gallon steel drum, one (1) 55-gallon steel drum and one (1) 55-gallon plastic drum. The 55-gallon steel drum was labeled kerosene and the label on the other steel drum was not legible. The plastic drum contained a small amount of cleaning detergent for pressure washers. A small amount of liquid remained in the drum labeled kerosene, whereas the smaller steel drum was nearly full. Staining was observed on the concrete floor underneath the drums.

**Outdoor Drum Storage Area**

Approximately one dozen 55-gallon steel drums were staged along the exterior wall face of the Traffic Services Division equipment storage building, and three additional one-gallon containers containing suspected petroleum products located a little further south (Location H on Figure 2). The drums were partially filled with petroleum-like product and staining on the ground was observed, which consisted at one time of the concrete floor of a building, now
razed, and overgrown with vegetation, making the concrete at that location cracked and easily permeated.

Washdown Station
A bulk tank approximately 1000-gallons in size to store a liquid calcium chloride solution used to wet rock salt for road salting in the winter was staged at the outdoor washdown station in the central region of the Site (Location WD – Figure 2). Little to no staining from salt was noted on the ground around the rim of the tank.

6.3 Storage Tanks
The following table summarizes the storage tanks maintained at the Site under NYSDEC PBS registration (PBS ID 3-600405), together with storage tanks not listed on the PBS registration and observed during Site reconnaissance and the review of available records. The following table was compiled from the Site reconnaissance, the EDR report, records available from prior investigations, and documents obtained from Freedom of Information Law requests, available at the time of issuance of this report. The releases in connection with the storage tanks were indicated as NYSDEC spill numbers (see Section 5.0 for a summary of these spill incidents).

6.4 Polychlorinated Biphenyls

PCBs may have been present in hydraulic oil used in the in-ground lifts presently located in the vehicle repair garage, hydraulic oil in fleet vehicles, bulk hydraulic oil stored onsite, present and past wet transformers, and fluorescent lighting ballasts.

The following in-ground lifts were observed during Site reconnaissance:

- One in-ground lift at each of the two southernmost truck bays in the southeast corner of the vehicle repair garage; and

- One in-ground lift in the southwest region of the vehicle repair garage, where police cars are being repaired.

According to the key Site manager, the existing in-ground lifts are presently not used and no additional in-ground lifts are present in the vehicle repair garage. According to the drawings associated with the new building construction permit for the vehicle repair garage, two additional in-ground lifts were proposed in the southwest corner of the building, between the existing in-ground lift and the southern building wall. These proposed lifts were not observed during Site reconnaissance. Currently two Mohawk post above-ground hydraulic lifts are operated in the vehicle repair garage.

Department of Public Works fleet vehicles that required the use of hydraulic oil have historically operated onsite. PCBs may have been present in hydraulic oil used by the fleet vehicles prior to the phase-out of PCBs in the late 1970s.

One (1) 475-gallon hydraulic oil AST is located in the vehicle repair garage. The good to new condition of the AST points toward a more recent installation, and hydraulic oil stored in the AST likely does not contain PCBs.

An outdoor pad-mounted electric transformer was observed off the northwest corner of the vehicle repair garage. The electric transformer was proposed for installation at the time of construction of the vehicle repair garage. No staining was observed on the concrete pad around the transformer. Transformers also serviced the historic sewage disposal plant, and were located off the northwest corner of the plant (see location STP on Figure 2). These historic transformers were not observed during Site reconnaissance. Based on the age of the
amongst transformers, PCBs may be present in the dielectric oil used in the existing transformer, and may have been present in the dielectric oil used in the historic transformers.

Most onsite buildings were lit by fluorescent lighting, which may have PCB-containing ballasts considering the age of these buildings. In accordance with ASTM E1527-05, Roux Associates did not inspect the ballasts for PCB content during the Site reconnaissance.

6.5 Staining and Stressed Vegetation

Staining indicative of a release was observed as follows:

- On the concrete floor underneath the oil burner’s oil filter, in the basement of the Bureau of Streets and highways office building (location B on Figure 2).

- On the concrete pad and underlying pavement of the gasoline storage shed (location D on Figure 2).

- On the concrete floor around the southernmost of two oil burners located in the boiler room in the rear (west) of the bureau of sanitation offices (location E on Figure 2).

- On the ground at the location of the outdoor drum storage area (Section 6.2 – location H on Figure 2). Grade at that location consisted at one time of the concrete floor of a building, now razed and overgrown with vegetation, making the concrete at that location cracked and easily permeated.

*De minimis* surficial staining resulting from poor housekeeping was observed at various locations in the vehicle repair garage (see Section 6.2). The concrete floor at these locations appeared in good condition, with no significant cracks or other structural compromise.

*De minimis* surficial staining typical of a parking area was also observed on the paved and unpaved areas of the Site, particularly in those areas used for the staging of fleet vehicles.

No stressed vegetation was observed at the Site during the Site reconnaissance.

6.6 Drains and Sumps

The following drains were observed during the Site reconnaissance:

- **Carpentry Shop (Location A on Figure 2):** One floor drain with a small, square and rusted open-grate cover, was observed in the stock room. The floor drain was full to the cover with dry sediments.
Office Building (Location B on Figure 2): One floor drain with cover removed was observed in the northwest region of the basement of the office building occupied by the Bureau of Streets and Highways. The floor drain was piped and accepted discharge of apparent water from the oil burner/boiler unit located in the basement.

Bureau of Sanitation Garage (Location G on Figure 2): Three floor drains with a large, square and rusted open-grate cover, were observed at that location. A floor drain was located within each of the three garage bays. The floor drains were filled to various degrees with bottom sediment. No standing liquid was observed.

Traffic Services Equipment Garage (Location H on Figure 2): Four floor drains with small, square and rusted open-grate covers, were observed at that location. A floor drain was located within each of the four garage bays. The floor drains were filled to various degrees with bottom sediment. No standing liquid was observed.

Vehicle Storage Garage (Location I on Figure 2): Six floor drains with a small, square and rusted solid cover, were observed at that location. The covers could not be removed at the time of Site reconnaissance.

Vehicle Repair Garage (Location J on Figure 2): A trench drain was observed in the drum storage room (former paint room), in the area used for truck repair, and in the area used for auto repair. A small floor drain with open-grate cover and a small sump filled with water were observed in the boiler room. According to the key Site manager, all drainage from this building is presently directly into an oil/water separator, for final discharge into the municipal sewer system.

Two stormwater catch basins with standing bottom liquid were observed at the location of the washdown station (Location WD on Figure 2). The catch basins also collect the wastewater generated during the washdown of street sweepers. The standing liquid appeared dark colored and with a sheen.

Another stormwater catch basin was observed outside the northwest bay of the vehicle repair garage. This area is used to wash vehicles with detergent and water, and the generated wastewater is collected in the catch basin and reportedly directed into the aforementioned oil/water separator.

6.7 Solid Waste
Household-type solid waste is collected in a roll-off trash container and picked up by the Bureau of Sanitation. A commingled recycling area operated by the Bureau of Sanitation was present in the northwest region of the Site. Commingled recycling consists of metal,
plastic coded 1 through 7, and glass bottles. These recyclable items are picked up from Monday to Friday for further offsite processing.

6.8 Wastewater

Sewer
The Site is located within the New Rochelle Sewer District administered by Westchester County. According to the deputy Commissioner of public works, John Clemente, sanitary waste from the Site is conveyed to the Westchester County Department of Environmental Facilities’ New Rochelle Wastewater Treatment Plant (WWTP), which neighbors the Site to the southeast, across Echo Bay (Figure 2). According to same, sanitary waste from the Site was conveyed to the historic onsite sewage disposal plant prior to construction of the existing New Rochelle WWTP. However, the historic sewage disposal plant was not completed until 1926, whereas the northernmost onsite building (Locations A through E on Figure 2) were constructed from 1917 to 1919: the endpoint discharge of sanitary waste from these buildings during that seven to nine-year period is not known.

Other Wastewater
According to the deputy Commissioner of public works, John Clemente, wastewater from onsite operations from the Site is conveyed to the Westchester County Department of Environmental Facilities’ New Rochelle WWTP. According to same, sanitary waste from the Site was conveyed to the historic onsite sewage disposal plant prior to construction of the existing New Rochelle WWTP. However, the historic sewage disposal plant was not completed until 1926, whereas the northernmost onsite building (Locations A through E on Figure 2) were constructed from 1917 to 1919: the endpoint discharge of wastewater into floor drains in these buildings during that seven to nine-year period is not known.

Stormwater
Stormwater at the Site is percolates in situ within the unpaved areas, enters Echo Bay via sheet flow in the southernmost paved area, and collected into a minimum of two catch basins located in the area of the washdown station. According to the key Site manager and deputy Commissioner of public works, John Clemente, the endpoint discharge of stormwater that enters the catch basins is not known. According to an historic drawing dated 12/14/1972
(Appendix J and Section 5.16), these catch basins discharged, at that time, into Echo Bay via 12-inch concrete outlet located to the southeast of the east of the washdown station.

6.9 Wells
Potable water at the Site and in the area of the Site is provided by the municipal system via United Water New Rochelle. No public water supply wells were observed at the Site or on the sidewalk along the Site. Numerous groundwater monitoring wells were observed within the southern region of the Site, the location of past environmental investigation and remediation activities (see Sections 3.4 and 5.0).
7.0 INTERVIEWS AND USER PROVIDED INFORMATION
Roux Associates incorporated interviews and a completed questionnaire provided by the User (i.e., Forest City) to complete this Phase I ESA. Information obtained from these sources was detailed throughout this report in various sections, as appropriate. Pertinent findings from these sources are summarized in the following sections.

7.1 Interviews
Roux Associates contacted the following individuals regarding the Site during the completion of this Phase I ESA:

- Interview conducted on July 10, 2012 with Mr. Domenic Acocella, the occupant’s key Site manager; and
- Interview conducted on July 12, 2012 with the owner-representative for the Site, Deputy Commissioner of public works John Clemente.

Findings from the interviews were summarized in appropriate sections of this document.

7.2 User Questionnaire
Roux Associates provided a questionnaire to Forest City. The questionnaire was completed by Mr. Abe Naparstek, representing Forest City (Appendix J). Mr. Naparstek responded by electronic mail and indicated the following, to the best of his knowledge:

- No environmental cleanup liens exist in connection with the Site.
- No activity and land use limitations (AULs) are in effect on the Site.
- The purchase price of the Site fairly reflects the fair market value of the Site.
- Historic onsite operation of a sewage disposal plant and knowledge of an onsite spill; and
- The User has knowledge of obvious indicators that suggest the presence of contamination at the Site, including the current use by the Department of Public Works, including for vehicle service and storage.

This information is concurrent with the findings documented in other components of this Phase I ESA.
8.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

Based on the information gathered as a result of the Phase I ESA process, Roux Associates has identified the following RECs in connection with the Site.

- **Open release cases:** Three spill cases are open with the NYSDEC (Spill Nos. 10-11242, 01-01307 and 98-00763). The spill incidents pertain to the release into the subsurface of gasoline and fuel oil from former USTs located between the vehicle storage building and the vehicle repair building.

- **Four locations of staining indicative of a release:** At the following locations, staining indicative of a release of petroleum products or hazardous substances was observed:
  - On the concrete floor underneath the oil burner’s oil filter, in the basement of the Bureau of Streets and highways office building. The concrete floor at that location was cracked and in poor condition.
  - On the concrete pad and underlying pavement of the outdoor gasoline storage shed abutting the stock room.
  - On the concrete floor around the southernmost of two oil burners located in the boiler room in the rear (west) of the bureau of sanitation offices. The concrete floor at that location was cracked and in poor condition.
  - On the ground at the location of an outdoor drum storage area, together with several one-gallon containers and associated spillage nearby. Grade at that location consisted at one time of the concrete floor of a building, now razed and overgrown with vegetation, making the concrete at that location cracked and easily permeated.

- **Current fuel dispensers, and product piping:** The integrity of the gasoline and diesel dispensers, and of the associated underground piping, is not known. As such, the fuel dispensers and underground piping pose a material threat of release of petroleum products to the subsurface.

- **Closed release case:** A spill occurred on 3/4/1998, when unknown petroleum product seeped into Long Island Sound from an embankment at the Site (NYSDEC Spill No. 97-13423), which is indicative of petroleum product in onsite subsurface media. The spill was closed on 5/4/1998.

- **Former petroleum USTs:** Nine former USTs that stored motor oil, waste oil, fuel oil, gasoline and diesel fuel were installed at the time of construction of the vehicle repair garage and were reported with releases to the subsurface at the time of removal. The above-mentioned three open release cases and an additional five closed release cases are associated with these USTs.

One former 3,000-gallon No. 4 fuel oil UST was reported to service the vehicle storage garage and to have been removed, with exact location unknown. A former kerosene AST was also located in the central region of the Site, near the existing
washdown station. The status and integrity of these storage tanks and associated piping is not known. As such, these tanks posed a material threat of subsurface contamination.

One former 2,000-gallon fuel oil UST was reportedly located in the rear (west) of the sanitation garage and removed. However, a vent pipe and two apparent ports to a subgrade void filled with rainwater were observed in a concrete platform in that area, indicative of a potential UST. The status and integrity of this storage tank and associated piping is not known. As such, this tank, whether still in place or removed, poses a material threat of subsurface contamination.

- **Current onsite use for vehicle repair:** Presently the southernmost building is used as a vehicle repair garage. One in-ground oil/water separator collects wastewater from the drainage system of the garage. The oil/water separator, associated drainage piping, and possibly an associated holding tank represent a material threat of release of hazardous substances and petroleum products into the subsurface. Additionally, in-ground lifts are present in the garage. The buried containers of hydraulic oil associated with the lifts, if any, pose a material threat of a release to the subsurface.

- **Historic onsite uses:** The Site was occupied by a boat yard in 1911, was operated as a Department of Public Works facility since 1917, included a sewage disposal plant that operated from 1926 until circa 1955 and serviced by outdoor transformers, and several onsite buildings have been used for vehicle repair, prior to construction of the existing vehicle repair garage in 1969. The occupants had reasons to handle hazardous substances or petroleum products during the conduct of operations. The potential exists for releases of hazardous substances or petroleum products into the subsurface media at the Site.

- **Offsite sources of groundwater contamination:** There are several current and historic, adjacent and nearby hydraulically upgradient properties with activities, conditions or incidents likely to cause or contribute to releases or threatened releases of hazardous substances and petroleum products. The collective potential exists for hazardous substances and petroleum products migration from these properties to the Site, particularly through groundwater migration.

Although not technically defined as RECs, the following is a list of potential environmental concerns at the Site that could potentially impact subsurface conditions at the Site:

- **The Site is underlain by historic/urban fill material whose origin and environmental quality is unknown.** In particular, a strip of fill material, approximately 50 feet wide, accreted along Echo Bay at or around the time of construction of the existing vehicle repair garage.

- **A large amount of soil and debris has been placed between the recycling yard and the vehicle storage garage.** No documentation was provided for the environmental quality of this debris.
- *De minimis* staining resulting from poor housekeeping was observed in the vehicle repair garage and throughout the outdoor paved and unpaved areas, including those used for the staging of fleet vehicles.

Roux Associates has identified the following data gaps in the information developed as part of the inquiry that affect the ability of the environmental professional to identify conditions indicative of releases at the Site:

- Pending partial response to FOIL requests from the USEPA and the NYSDEC. If any additional pertinent information is obtained from responses to outstanding FOIL requests, Roux Associates will prepare a letter addendum summarizing these findings.

- Overgrown vegetation did not allow for the inspection during Site reconnaissance of a strip of land along the rear (west) exterior wall of the northernmost buildings (i.e., those buildings used as a locker room, stock room, and storage room).

Please note that although the partial lack of record sources from the NYSDEC and USEPA listed above is considered a data gap, it is not considered a material limitation for the completion of this Phase I ESA report.

**Recommendations for the City Yard**

A Phase II Investigation is recommended to further investigate the RECs identified for the City Yard property. The investigation will include sampling of subsurface media (soil, groundwater and potentially soil vapor) on the property. It is also recommended that investigation and characterization of fill material on the Site, in particular a strip of fill material, approximately 50 feet wide, accreted along Echo Bay, be performed.

It is also recommended that prior to and/or during redevelopment of the property, proper characterization and disposal of stored chemicals and drums be performed.

As noted, access was not gained to the overgrown strip of land along the rear (west) exterior wall of the northernmost buildings during the Site reconnaissance. As such, Roux Associates recommends that access be obtained to that area in an attempt to determine if additional RECs are present. If additional RECs are identified, then the Phase II Investigation could be refined accordingly to address them.
At least three spills (i.e., one recent and two that appear not to have been addressed since 2007) remain open for the City Yard. As part of the Phase II Investigation, we recommend further investigation and evaluation of these spills. Based on the results of the Phase II Investigation, the need for remedial action will be evaluated.
9.0 REPORT ASSUMPTIONS AND LIMITATIONS

This Phase I ESA Report, including the exhibits attached hereto, describes the results of Roux Associates’ initial investigation to identify the potential presence of RECs involving or affecting the Site in accordance with ASTM E1527-05. This Phase I ESA was conducted by Roux Associates in accordance with the regulatory requirements for conducting AAI as set forth in the USEPA AAI Rule, at 40 CFR Part 312. Specifically, the preamble to the AAI Rule states:

“In today’s final rule, EPA is referencing the standards and practices developed by ASTM International and known as Standard E1527-05 (entitled “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”) and recognizing the E1527-05 standard as consistent with today’s final rule. The Agency determined that this voluntary consensus standard is consistent with today's final rule and is compliant with the statutory criteria for all appropriate inquiries. Persons conducting all appropriate inquiries may use the procedures included in the ASTM E1527-05 standard to comply with today's final rule.”

One of the requirements that a person acquiring real property must meet in order to qualify for either the innocent landowner, contiguous owner, or bona fide prospective purchaser (collectively hereinafter “Prospective Purchaser”) defense to liability under the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), is that person must conduct all appropriate inquiry in conformance with the AAI Rule (or the ASTM E1527-05) prior to acquisition of the property. Forest City has acknowledged that, under the AAI Rule, Roux Associates’ performance of the Phase I ESA in accordance with ASTM E1527-05 will not alone result in Forest City satisfying all requirements of the AAI Rule and provide a defense to CERCLA liability.

Forest City has acknowledged that the AAI Rule also requires that the Prospective Purchaser undertake certain additional inquiries and post-acquisition activities to satisfy the CERCLA AAI requirements. **ACCORDINGLY, ROUX ASSOCIATES MAKES NO GUARANTEES OR WARRANTIES, EXPRESSED OR IMPLIED, THAT THIS PHASE I ESA, WILL IN FACT QUALIFY CLIENT FOR A DEFENSE TO CERCLA LIABILITY.**

---

1 Federal Register: November 1, 2005 (Volume 70, Number 210) Page 66081.
Roux Associates has performed this Phase I ESA in a professional manner using that degree of skill and care exercised for similar projects under similar conditions by reputable and competent environmental consultants. Professional judgments expressed herein are based on the facts currently available to Roux Associates.

The AAI Rule requires, and the conclusions and recommendations stated herein, represent the application of a variety of engineering and technical disciplines to material facts and conditions associated with the Site. As such, these conclusions and recommendations are based on subjective interpretations and the exercise of discretion. Many of these facts and conditions are subject to change over time. Accordingly, the conclusions and recommendations must be considered within this context.

Forest City has agreed that Roux Associates shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the Phase I ESA was performed. To the extent practicable, Roux Associates has identified data gaps and has evaluated the potential significance of such data gaps. Recommendations to address those data gaps are presented herein and are based on the data available at the time of the performance of the Phase I ESA. Implementation of the recommendations may not fully address the data gaps as the information obtained from execution of those recommendations may alter or modify the interpretation of the site conditions and conclusions regarding the data gaps.

It should be noted that Roux Associates has not conducted any intrusive activities on the Site and is relying on information presented by others, often in preliminary, draft, or verbal form. By referencing this information, Roux Associates does not accept responsibility for the accuracy of the underlying data, sampling methods, laboratory analysis, or documentation.

This Phase I ESA Report should not be considered a legal interpretation of existing environmental laws and regulations. The Phase I ESA was conducted with a reasonable degree of inquiry to identify significant RECs, but uncertainty is not eliminated. No Phase I ESA can wholly eliminate uncertainty regarding the potential for RECs in connection with a
property. The Phase I ESA process is intended to reduce, but not eliminate, the uncertainty involved with identifying RECs.

This Phase I ESA Report is not an appraisal or value judgment of the Site. Forest City has agreed that Roux Associates shall not be liable for any use of the Phase I ESA Report as an appraisal or value judgment of the Site.

The Phase I ESA Report has been prepared for the exclusive use of Forest City for specific application to the Site covered by the Phase I ESA Report. Forest City has agreed that any third-party use of this Phase I ESA Report is the sole responsibility and at the sole liability of Forest City.
We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR Part 312.

AND

We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the All Appropriate Inquiry (AAI) in conformance with the standards and practices set forth in 40 CFR Part 312.

Respectfully submitted,

ROUX ASSOCIATES, INC.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
NEW YORK OFFICE
Qualifications of Key Project Personnel
Joseph D. Duminuco  
Vice President/Principal Hydrogeologist

Specialties:  
Providing environmental consulting services and strategic planning to the real estate industry focused on Brownfield Redevelopment projects. As Brownfields/Real Estate Services Practice Area Leader at Roux, responsibilities include recruiting, mentoring, coordination between sales and technical forces, development of marketing materials and developing strategic plan for the firm. Performed hundreds of investigations and remediations of soil, groundwater, and soil vapor at commercial and industrial sites. Significant experience (over 100 sites) in the railroad and transit field.

Experience Summary:  
Twenty six years of experience; Brownfields/Real Estate Services Practice Area Leader, Vice President/National Client Manager, Office Manager, Principal, Senior and Project Hydrogeologist at Roux Associates; Staff Hydrogeologist at Geraghty & Miller; and Geologist at Mueser Rutledge Consulting Engineers.

Credentials:  
B.S. in Geology, Hofstra University, 1983  
M.S. in Geology, Wright State University, 1990

Key Projects:
- **Principal-in-Charge of a retail/commercial redevelopment in the Bronx, New York.** The site contained a NYCDPS E-Designation due to a previous onsite service station UST release. In addition, a previous Phase I and Phase II ESA identified a former dry cleaner with a chlorinated solvent release. Roux performed a focused Phase II ESA at the dry cleaner and determined the chlorinated solvent release was not a hazard. Roux obtained closure under the NYSDEC Spills group and the site was redeveloped with a restaurant, a pharmacy, and re-use of a former supermarket.
- **Principal-in-Charge of an 80-acre mixed use redevelopment in Yonkers, New York.** Work included Phase I and Phase II investigations, asbestos surveys and abatement support and response to a PCB transformer oil impact form an adjacent landowner. Coordinated with NYSDEC and responsible party to address contamination issue and not impact client’s construction schedule.
- **Principal-in-Charge of a mixed-use (residential, retail, commercial) Brownfield redevelopment in the Bronx, New York.** Project consisted of a Phase I and Phase II ESA to satisfy NYCDP requirements. The media investigated included soil, groundwater, soil vapor, and building materials. During the Phase II ESA, Roux performed preliminary in situ waste characterization.
- **Principal-in-Charge of numerous due diligence projects for owners, developers, managers, municipalities and lenders at commercial and industrial properties throughout the Northeast.** Activities included performance of UST evaluations and closures, hot spot remediations, Phase I and Phase II Site Assessments, vapor intrusion studies and mitigation, lead based paint, asbestos and hazardous materials surveys, interaction with regulatory agencies on behalf of clients and development of remedial cost estimates for planning and negotiation.
- **Principal-in-Charge of the redevelopment of a former paint factory in Queens, New York.** The site is undergoing a RCRA interior and exterior closure as well as a Brownfield cleanup program investigation and remedy to address free product, soil, groundwater and vapor intrusion issues. The site will be redeveloped into commercial/residential mixed use. Site also sits on a waterway and extensive bulkhead remediation is required.
- **Principal-in-Charge of the investigation and remediation of a self storage complex in Staten Island, New York through the NYCOER Brownfields Program.** Activities include a remedial investigation, preparation of a remedial action plan and installation of a sub slab depressurization system.
- **Principal-in-Charge for a property transfer support project at a heavily contaminated state-of-the-art distribution facility in the Bronx, New York.** The site was a former MGP being handled under the VCP in central office, the site had an open spill under the regional spills group and the site was attempting to apply to the BCP through the regional office. Roux performed a Phase I for the buyer, a Phase II and remedial cost estimate for the owner and negotiated with the buyer’s consultant and NYSDEC to limit the scope of the investigation and cleanup.
- **Principal-in-Charge of multiple retail developments in Harlem, New York.** Work included Phase I and Phase II investigations to satisfy NYCDP and lender requirements. Lead based paint and asbestos surveys were performed as part of due diligence. Extensive asbestos issues were identified in building materials and soil backfill. Worked with asbestos contractors to determine best abatement approaches for the redevelopments.
• Principal-in-Charge of a Brownfield Redevelopment under the Voluntary Cleanup Program at a commercial property in Queens, New York, where buyer was about to walk away from the deal since high concentrations of chlorinated solvents were detected in groundwater beneath the site. Based on data evaluation convinced NYSDEC to investigate adjacent property as likely source of groundwater contamination. NYSDEC agreed that no further action was warranted by our client and deal was completed.

• Principal-in-Charge of investigation and remediation of a catastrophic heating oil release for a commercial office building in Brooklyn, New York. All work was performed under the oversight of the NYSDEC Spills Group and time was of the essence for the initial response as the heating season was fast approaching. Roux performed free product delineation and remediation and indoor air monitoring at adjacent buildings. Site closure was obtained from NYSDEC.

• Principal-in-Charge of a fast-paced property transfer environmental assessment at an electronics manufacturing facility contaminated with metals and solvents in Bridgeport, Connecticut. Project consisted of the development and implementation of a detailed field sampling plan within a one-week time frame: indoor and outdoor soil sampling and monitoring well installation; groundwater and sewer effluent sampling; asbestos survey and asbestos sampling; and a tidal influence assessment. Data was evaluated and a summary report was prepared within one week and a remedial alternatives evaluation and cost estimate was prepared in less than one week.

• Principal-in-Charge of a multi-phase RI/FS at a PCB and diesel-fuel contaminated railroad yard in New York City. The Site is on the state superfund list because PCBs were detected in soil, groundwater, hydrocarbon plume, sewer water and sewer sediment. Responsibilities include: preparation of work plans; delineation of PCB hot spots with immunoassays; sewer investigation including pumpouts, monitoring, flow measurements and video surveys prior to abandonment; investigation and remediation of numerous USTs including gasoline, solvents and fuel oils; support of construction activities; report preparation; negotiations with the NYSDEC/NYSDOH; participation in public meetings; and implementation of interim remedial measures to mitigate the PCB-contaminated hydrocarbon plume; interim remedial measures to mitigate PCB, PAH and lead contaminated soil hot spots; and agency acceptance of alternate cleanup levels for site soils that resulted in savings of over $80 million.

• Project Coordinator of multi-year environmental consulting contracts with Amtrak and New Jersey Transit. Responsibilities include contract negotiations, workload/resource distribution, compliance with contract requirements including utilization of M/WBE contractors, client-staff liaison, adherence to budgets and schedules, and overall quality assurance.

• Principal-in-Charge of project to support the construction of a high speed rail program. Performed Phase I and II Environmental Site Assessments as part of due diligence at three major rail yards. Prepared reports and presentations regarding environmental conditions to regulatory agencies and the design-build consortium. Performed pre-construction sampling and hot spot remediation programs. Also, prepared environmental contingency plans for construction contractors to follow.

• Principal-in-Charge of investigation, remediation and closure activities at dozens of railroad and transit sites in the northeast. Sites include PCB-containing transformer substations, regional bases, passenger stations, maintenance and layover yards, mainline tracks and bus maintenance facilities. Activities included soil, groundwater and free product sampling, report preparation, negotiation with regulators for no further action based on natural attenuation of groundwater, free-product removals, negotiation of site-specific soil cleanup levels, UST removals/abandonments, soil remediation, preconstruction sampling and waste disposal.

• Principal-in-Charge of an investigation at a PCB and solvent-contaminated transformer manufacturing/repair facility in North Carolina. Responsibilities include preparation of a work plan and oversight of the project which consists of soil borings and sampling, immunoassay testing, monitoring well installation, groundwater sampling, report preparation, and remedial alternatives evaluation.

• Principal-in-Charge of an NPL Superfund Site in Delaware. Responsibilities include: the on-going performance monitoring of a groundwater extraction system. The remedial system was installed to capture a chlorinated solvent plume emanating from a former PVC manufacturing facility. In addition, prepared and implemented an RI work plan for a USEPA-required off-site investigation of adjacent chemical manufacturing facilities and a large petroleum refinery. Also included DNAPL investigation and deep aquifer study.

• Principal-in-Charge of a NJDEP-ECRA/ISRA investigation and cleanup involving groundwater and soil contamination at a pesticide formulation and distribution facility in New Jersey. Responsibilities include: delineating the nature and extent of the off-site contaminant plume; determining groundwater flow patterns in a two-aquifer system; using a three-dimensional computer model to determine proper location for extraction and injection wells; and preparing work plans and summary reports for NJDEP-required additional delineation of the nature and extent of on-site soil contamination.

• Project Director of all UST investigative and remedial work performed at service station sites in New England for a major oil company. Responsibilities included: preparation and negotiation of work orders; coordination of monitoring and sampling; communication with client, regulator and site owner contacts; management of technical aspects of all projects; strategy evaluation with client; administration of all contracts and operation and maintenance of remediation systems to mitigate UST releases which included groundwater pump and treat, product recovery, and soil venting systems.

• Project Manager of a U/SFS at a former electronics manufacturing facility in an industrial area of Long Island. Metals and solvents (plating wastes) were detected in on-site leach pools and in soil and groundwater. Responsibilities include reviewing and revising the work plan and providing technical oversight of the project, including: Geoprobe drilling; soil sampling; soil-gas surveys; leach pool sediment sampling; monitoring well installation; groundwater sampling; geophysical mapping; report preparation; and negotiations with NYSDEC. Convinced NYSDEC that groundwater remediation was inappropriate in an industrialized area. Focused remediation to a few soil hot spots only.

• Principal-in-Charge of a multi-year quarterly monitoring and reporting program at a municipal landfill complex on Long Island, New York. The complex consists of multiple landfills, leachate containment systems and leachate holding tanks. Project involves collection of water level and water-quality data from dozens of monitoring wells, sampling of leachate containment systems, coordination with contract laboratory, data validation, data evaluation and report preparation.

• Provided litigation support for an industrial property owner where a tenant’s manufacturing operations had resulted in contamination of the building in addition to soil and groundwater. Without prior notification or consent from the owner, the tenant had conducted a Phase II investigation and remediation activities to address metals and VOCs. Reviewed technical reports and prepared a work plan to address areas for further investigation and perform confirmatory sampling in support of the owner of the property. Provided deposition testimony in connection with the case.
Luc Derrendinger, Ph.D.
Senior Geologist

Technical Specialties:
Phase I and Phase II Environmental Site Assessments (ESAs), including regulatory agency and contractor coordination. Environmental fate of contaminants and environmental geochemistry.

Experience Summary:
Seven years of experience: Project Geologist with Roux Associates, Inc.; Project Hydrogeologist and Project Manager with Freudenthal & Elkowitz Consulting Group, Inc., Commack, New York; Research Scholar at the Brookhaven National Laboratory, Upton, New York; Postdoctoral Researcher at the Swiss Polytechnic Research Institute, Zürich, Switzerland.

Credentials:
Ph.D., Soil Science (Specialization: Environmental Geochemistry), University of California at Berkeley, 1997
M.S., Environmental Geosciences, Institut National Polytechnique de Lorraine, Nancy (France), 1992
B.S., Geological Engineering, Ecole Nationale de Géologie, Nancy, 1992

Publications:

Certifications:
Asbestos Inspector, New York State Department of Labor
Lead Inspector, United States Environmental Protection Agency
OSHA, 40-Hour HAZWOPER

Honors:

Technical Review Experience:
Geochimica and Cosmochimica Acta (Article Manuscript)
Oxford University Press (Soil Chemistry Textbook)

Key Projects:
• At the Brookhaven National Laboratory, researched and implemented the preparation of uranyl phosphate minerals for use by the research team in the study of the remediation of Uranium-contaminated soils and wastes. Performed dissolution experiments of uranium phosphate at various pH values. Supported microbial dissolution experiments of uranyl phosphate minerals.

• At UC Berkeley, researched and implemented the quantification of the stability (i.e., the propensity to remain suspended in an aqueous solution) of natural colloids. Contaminants (e.g., radionuclides, heavy metals, etc.) adsorbed on stable colloidal particles (e.g., clay, humic substances, etc.) are often thought to travel much larger distances than typically predicted in groundwater transport models, a process referred to as colloid-facilitated transport.

• Project Manager responsible for investigation at a former industrial manufacturing facility in Brooklyn, New York. Investigation included testing of soil, groundwater, soil vapor and indoor air, with presampling geophysical survey.

• Project Manager responsible for investigation at multi-unit commercial buildings in Oceanside, New York. The site had potential areas of concern consisting of widespread fill material on historic wetlands, releases from ASTs, historical use of paint and degreasing solvents, networked stormwater leachfields, and offsite upgradient releases of petroleum products. Investigation included soil, bottom sediment and multi-level groundwater testing.

• Field Manager for investigation at an abandoned agricultural parcel proposed for development with a school in Riverhead, New York. Performed surficial and sub-surface soil sampling to appraise the lateral and vertical extent of pesticide impacts.

• Field Manager for underground storage tank removal and abandonment at several commercial facilities on Long Island.

• Performed over 150 Phase I ESAs for light-industrial, commercial and residential property transfers and lease agreements for a variety of clients in New York.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

**Federal CERCLIS NFRAP site List**

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/28/2011 has revealed that there is 1 CERC-NFRAP site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 08/19/2011 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/15/2012 has revealed that there are 4 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states’ equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Conservation's Inactive Hazardous waste Disposal Sites in New York State.

A review of the SHWS list, as provided by EDR, and dated 05/21/2012 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

**EXECUTIVE SUMMARY**

**State and tribal landfill and/or solid waste disposal site lists**

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the list.

A review of the SWF/LF list, as provided by EDR, and dated 04/11/2012 has revealed that there are 2 SWF/LF sites within approximately 0.5 miles of the target property.

**State and tribal leaking storage tank lists**

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

A review of the LTANKS list, as provided by EDR, and dated 03/29/2012 has revealed that there are 82 LTANKS sites within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

HIST LTANKS: A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database.

A review of the HIST LTANKS list, as provided by EDR, and dated 01/01/2002 has revealed that there are 53 HIST LTANKS sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Environmental Conservation’s Petroleum Bulk Storage (PBS) Database

A review of the UST list, as provided by EDR, and dated 05/09/2012 has revealed that there are 23 UST
sites within approximately 0.25 miles of the target property.

CBS AST: Chemical Bulk Storage Database. Registration data collected as required by 6 NYCRR Part 596. It includes facilities storing hazardous substances listed in 6 NYCRR Part 597, in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size. Includes facilities registered (and closed) since effective date of CBS regulations (July 15, 1988) through the date request is processed.

A review of the CBS AST list, as provided by EDR, and dated 01/01/2002 has revealed that there is 1
EXECUTIVE SUMMARY

CBS AST site within approximately 0.25 miles of the target property.

CBS: These facilities store regulated hazardous substances in aboveground tanks with capacities of 185 gallons or greater, and/or in underground tanks of any size.

A review of the CBS list, as provided by EDR, and dated 05/09/2012 has revealed that there is 1 CBS site within approximately 0.25 miles of the target property.

State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements. The voluntary remedial program uses private monies to get contaminated sites remediated to levels allowing for the sites' productive use. The program covers virtually any kind of site and contamination.

A review of the VCP list, as provided by EDR, and dated 05/21/2012 has revealed that there is 1 VCP site within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA’s listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A review of the US BROWNFIELDS list, as provided by EDR, and dated 06/27/2011 has revealed that there
are 2 US BROWNFIELDS sites within approximately 0.5 miles of the target property.

**Records of Emergency Release Reports**

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 03/29/2012 has revealed that there are 45 NY Spills sites within approximately 0.125 miles of the target property.

*Additional key fields are available in the Map Findings section*
NY Hist Spills: This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database.

A review of the NY Hist Spills list, as provided by EDR, and dated 01/01/2002 has revealed that there are 35 NY Hist Spills sites within approximately 0.125 miles of the target property.

### Other Ascertainable Records

**RCRA-NonGen:** RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/15/2012 has revealed that there are 18 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

### Site 1 of 27 in cluster A

**Property**
- **NEW ROCHELLE MUNICIPAL GARAGE**
- **224 EAST MAIN ST**
- **NEW ROCHELLE, NY 10801**

**Actual:**
- 13 ft.

**Registry ID:** 110019610900

**Environmental Interest/Information System**
- FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

### Site 2 of 27 in cluster A

**Property**
- **CITY YARD - NEW ROCHELLE**
- **224 E. MAIN STREET**
- **NEW ROCHELLE, NY 10801**

**Actual:**
- 13 ft.

**Recipient name:** R2 Brownfields TBA (previously Superfund TBA)

**Property name:** City Yard - New Rochelle

**Property #:** Not reported

**Parcel size:** 6.47

**Latitude:** 40.9154

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Code: Not reported
Quantity: 00015
Units: G - Gallons (liquids only)* (8.3 pounds)
Number of Containers: 003
Container Type: DF - Fiberboard or plastic drums (glass)
Handling Method: T Chemical, physical, or biological treatment.
Specific Gravity: 100
Year: 97
### Site 7 of 27 in cluster A

Environmental Interest/Information System
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,
and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York’s Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

NEW ROCHELLE CHEVROLET FORMER (Continued)  

Contact telephone: (914) 244-6139  
Contact email: Not reported  
EPA Region: 02  
Classification: Non-Generator  
Description: Handler: Non-Generators do not presently generate hazardous waste  

Owner/Operator Summary:  
Owner/operator name: ARGONAUT HOLDINGS INC  
Owner/operator address: RENAISSANCE CENTER MC: 482-B38-C96  
DETROIT, NY 48265  
Owner/operator country: US  
Owner/operator telephone: (313) 667-2750  
Legal status: Private  
Owner/Operator Type: Operator  
Owner/Op start date: 01/01/1999  
Owner/Op end date: Not reported  

Handler Activities Summary:  
U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No  

Historical Generators:  
Date form received by agency: 07/12/2010  
Facility name: NEW ROCHELLE CHEVROLET FORMER  
Classification: Conditionally Exempt Small Quantity Generator  

Hazardous Waste Summary:  
Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,
WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Assessment of Health: The site is immediately adjacent to residential and commercial properties and extends to the Echo Bay tidal lands. Access to the site is restricted by chainlink fencing. PCBs had been found at elevated levels in the former substation building and surrounding soil. On-site cleanup of PCBs is nearing completion and the majority of the site has been covered with clean fill. Final remedial activities including off-site sediment removal in an adjacent mudflat area was completed in 2004. Soil sampling conducted at adjacent residential properties found PCBs in four yards above the cleanup guideline of 1 part per million. The PCB contaminated soils in the yards were excavated and removed. There are no known drinking water supply wells in the vicinity.

Description: Location Description This 3 acre site is bordered to the north by Echo Bay, to the west and south by residential properties, to the southwest by Echo Bay Avenue, and to the west by a landscaping company (formerly a fuel oil terminal). Site Features All the former structures and underground utility services have been removed, and the whole site has been levelled, top-soiled and grassed. Current Use: None Surrounding Uses The areas to the south and west are mostly residential. Areas to the northwest are mostly commercial. Historical Sources of Contamination Con Edison used the site as an electrical distribution substation until 1981. PCBs transformers were stored and used at the site. Leaks and spills of PCBs may have occurred in the handling or servicing of these transformers. The soil on site and the sediment in the Bay were contaminated with PCBs. Investigations/Action Completed to Date The June 2001 Remediation Report and the July 2003 Addendum for on-site cleanup, and the February 2005 Remedial Action Report for off-site cleanup detail all the investigations and interim remedial measures conducted at the site. The on-site cleanup was completed in May 2003 and the off-site sediment cleanup was completed in April 2004. Current Action The February 2005 Remedial Action Report is being reviewed, and the

6/20/09 D. Weitz responded after-hours to spill. #2 fuel oil was found in both sumps in Esposito's basement at 26 Pratt St., and was pumping out to both sides of house. Pumps were turned off. Northeast Env. was called in by Town and Country Oil (203-661-2413). They were pumping out both sumps, and doing a cleanup of ground and lawn areas on both sides of house. In addition, they dug up fuel line from basement, and found that there was no leak in the line, and the tank was not leaking either, so spill was coming from somewhere else. Next door neighbor, Newgent, at 24 Pratt, also had some fuel oil in their sump. Possible source may be neighbor on other side, at 28 Pratt. Reverse lookup says person living there is Agnaldo Gouvea at 914-576-4816. Ms. Newgent reports that there was a sound of jackhammers coming from this location, but they were either not at home, or would not answer door, at the time of this writer's visit. Contacted Carlos Torres from WCHD, and notified T. Ghiosay from DEC Spills, who will be following up. DW 06/22/09 Inspected 24 and 26 Pratt homes. Nugent at 24 Pratt had a fresh pad in the sump with only a minor amount of fuel in the sump. Esposito at 26 Pratt had a large volume oil in both sumps, in a drain in the middle of the basement floor and in a depression around the sanitary sewer main. Nick from National Environmental Specialists was contacted and advised that the oil in those locations needed to be removed ASAP to present the fuel from overflowing onto the floor. Northeast Env also had a late day appointment to enter 28 Pratt to retrieve a soil sample from beneath the basement slab. The homeowner at that home told Northeast workers that he had a leaky line a few months ago that he repaired himself. TG 06/28/09 Inspected both 28 and 26 Pratt. NE Env had a work crew at Esposito digging exploratory holes through the basement slab. Three excavations were completed, in the rear, middle and front of the basement. A large amount of fuel oil was accumulating in all three of the pits. (photos taken) Crew will continue excavating more pits for observation and oil recovery. Sumps and holes are being periodically vaced. TG July 2009 Mr. Gouvea has been denied coverage from his insurance company and states that he is having a problem getting a loan to pay for the cleanup. August 5, 2009 Northeast has stopped working at the Esposito residence until they receive word that someone will pay their bill. Mr Esposito claims he is not capable of paying their bill and that his claim with his own insurance company, Travelers, has also been denied. This writer called Travelers insurance rep Kathy Carroll who said the claim was still open but she had none of the facts involving his case. I summarized the situation for her and she stated that the case will be reevaluated. TG 09/04/09 No commitment from Travelers, insurer for Esposito for coverage, thus Right-of-Entry letters sent to Gouvea, Esposito and Newgent. TG
ESPOSITO RESIDENCE (Continued)

09/14/09 Right-of-entry letters returned from Esposito and Nugent. TG 10/20/09 TriState presently continuing the process of removing impacted soil and pumping oil and groundwater from the Esposito basement. Excavation work is approaching the columns supporting the center beam of the house and will need to be removed and replaced. Thus a meeting with local city personnel was requested, Capt Henry Senno New Rochelle FD and Larry Alston, New Rochelle Senior Building Construction Inspector attended along with Lisa Hauer from TriState.

Mr Alston stated that due to the need to remove the columns, a structural engineer or architect would need to submit a plan for that work to the Building Dept for review and approval. TG 10/21/09 At the request of Dawn Nugent, 24 Pratt Street, TriState went into her home to remove lightly oiled soil near her sump pit. Mr. Nugent explained to Scot Taylor from TriState that during the time of the original incident, oil and water seep through the front foundation wall rather than surfacing from the soils beneath the basement slab as was previously thought. It appears likely that oil was pumped out of the Esposito sump which discharges just a foot or two from the spot where it entered through the Nugent foundation wall. A small amount of impacted soil around the sewer line, trap and sump pit was removed. A boring to groundwater placed close to the sump area was free of oil, so it doesn’t appear that the oil migrated through the subsurface soils. TG 10/2/09 Additional borings placed in the rear basement area at the Gouvea basement to further define the extent of the migration of the free product. Removed impacted soil beneath the Esposito sump pump discharge pipe in the front yard, TG

Remarks: Oil in the sump pump; oil line has been shut off. It is not know where the source is. Northeast environmental will be called for clean up

DER Facility ID: 364618
DEC Memo: Also see Spill 0903 06/23/09 Likely that this spill is source of the oil at two adjacent properties located at 26 and 24 Pratt Ave, reported under spill number 0903297. TG 06/24/09 Spoke with Mr Gouvea who stated that he had a oil line leak next to the boiler which he repaired about two months ago. Before the repair, he said his oil consumption was excessive and that he contacted his oil company about...
the issue. Burke Oil responded on three occasions to service the boiler. Mr Gouvea realized that there was a line leak when his wife smelled oil beneath the carpet in an area adjacent to the boiler room. The carpet was removed and a large oil stain was observed on the concrete floor. TG 06/25/09 Mr Gouvea homeowner’s insurance is Traveler Insurance. Special claims rep Julie Ann Boccuzzi in the Hartford office was contacted (860)277-6944. After explaining the conditions, she agreed to expedite the claim to see if coverage exists. Claim number is U9J7686 on site and U9J7869 for off site 3rd party liability. 06/26/09 Inspected the home observed the patched floor next to the boiler. Oil stains exist in the patched area. Carpet prevented inspection of the rest of the basement floor. Photos taken. NE Environment working next door. Large amounts of oil observed in in three pits that have been dug in that basement. TG 10/20/09 TriState presently continuing the process of removing impacted soil and pumping oil and groundwater from the Esposito basement. Excavation work is approaching the columns supporting the center beam of the house and will need to be removed and replaced. Thus a meeting with local city personnel was requested, Capt Henry Senno New Rochelle FD and Larry Alston, New Rochelle Senior Building Construction Inspector attended along with Lisa Hauer from TriState. Mr Alston stated that due to the need to remove the columns, a structural engineer or architect would need to submit a plan for that work to the Building Dept for review and approval. TG 10/21/09 At the request of Dawn Nugent, 24 Pratt Street, TriState went into her home to remove lightly oiled soil near her sump pit. Mr. Nugent explained to Scot Taylor from TriState that during the time of the original incident, oil and water seep through the front foundation wall rather than surfacing from the soils beneath the basement slab as was previously thought. It appears likely that oil was pumped out of the Esposito sump which discharges just a foot or two from the spot where it entered through the Nugent foundation wall. A small amount of impacted soil around the sewer line, trap and sump pit was removed. A boring to groundwater placed close to the sump area was free of oil, so it doesn’t appear that the oil migrated through the subsurface soils. TG 10/2/09 Additional borings placed in the rear basement area at the Gouvea basement to further define the extent of the migration of the free product. Removed impacted soil beneath the Esposito sump pump discharge pipe in the front yard, TG

Remarks: DUE TO A LEAKING LINE AN UNK AMOUNT OF PRODUCT SPILLED TO SOIL. CLEAN UP IS PENDING.

#### DEC Remarks:
10/21/99 SPILL OCCURED ON A HAZWASTE SITE KNOWN AS CON ED ECHO BAY : THIS SITE HAS BEEN IS CONTAMINATED WITH PCBs IN SOIL, WATER AND CONCRETE STRUCTURES. A SUB-CONTRACTOR REPORTED THE SITUATION TO CON ED PROJECT MANAGER A DAY LATER. STRESSED THE 2-HOUR STATE LAW NOTIFICATION TIME FRAME. BEING HANDLED BY R. PERGADIA - HAZARDOUS WASTE, SPILLS-NFA

#### Remark:
Company was doing a cleanup at this site and they broke a pipe and spilled
RETIRE ECHO AV SUB STAT (Continued) S104283285

about 1 pint onto soil sample was taken

DER Facility ID: 239683
DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was
"GHIOSAY" 02/15/2000 T. GHIOSAY INSPECTED SITE. EXCAVATION OF LEAD
CONTAMINATED ASH WAS BEING PERFORMED WHEN AN UNKNOWN OIL (POSSIBLE
FUEL OIL) WAS FOUND ON THE WATER TABLE. CON ED TOOK SAMPLES OF OIL
FOR PETROLEUM ID & PCB. WILL SEND COPY OF RESULTS TO DEC. August
2002 Spill cleanup report submitted by Lawler Matusky and Skelley
outlining the measures taken to excavate contaminated soil and pump
fuel contaminated water. Based on the information contained in that
report, no further action is required. TG
Remarks: strong odor of fuel oil in a hole being worked on - next to sub
staion is a retired fuel oil depot

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AZNARAN RESIDENCE (Continued)

9/8/11- WCHD reports water with oil on top in basement. Source not from resident as oil not stored on site; source unknown. Notified Todd Ghiossay; he will contact WCHD and handle. DT 09/08/11 Met Chris Lalak onsite and proceeded to inspect the basement which has been flooded twice in 10 days. Previous flood resulted from Hurricane Irene. Underneath a staircase there is a seepage of red fuel oil entering on the flood waters. The home is heated by gas as is her neighbor at 34 Pratt St. The next door neighbor at 38 Pratt St has an above ground oil tank which has a line problem about a year ago according to what she told Chris Lalak. Chris Lalak said she told him that the line leaked at the boiler and a puddle developed near the burner. The line was replaced but a search of the database indicates that a spill report was never made. The tank is filled via a remote curbside fill on Adams St. owner of 38 Pratt St is Vicky Rossi. Rina Aznaran was given a supply of pads to absorb the oil and a fan obtained from TriState to vent the basement. Chris Lalak will check the property again tomorrow. TG 09/14/11 TriState excavated next to the foundation where oil is entering the Aznaran home. Three holes were dug, one near the front of the house, one at the seepage location and one further towards the rear of the house. The soils were screened with a PID meter. No PID readings were detected in the front and rear borings. elevated reading were present in the seepage location near the top of the footing. TriState to submit a sketch and PID readings. 09/15/11 Met with the next door neighbor at 38 Pratt Street, Vicky Rossi and inspected her tank and heating system. A new line from the AG tank to the boiler has been installed. Ms Rossi stated that about 1-2 years ago, either Remmington or Schildwacter Fuel (who later bought Remmington Oil) broke the old oil line which is located beneath the slab. The amount of oil lost is unknown. A new line was installed but the old line remains beneath the cement floor. She also stated that she had run out of oil last year but it wasn’t clear to this writer why she had run out. TG

Remarks:
Flood waters brought oil into the resd basement from unknown source. Caller presuming coming from a neighboring property.

<td>DEC Memo:</td>
<td>C. Lalak of WCHD to respond and update DEC. DT 11/8/10 Callback from WCHD- Burke Heat overfilled tank. Tank in basement and oil seeped from top fitting and onto floor. Burke Heat and Fire Dept. on scene cleaning up and venting out basement. WCHD reports spill is under control. WCHD to followup. DT 11/8/10 11/13/10 D. Weitz responded after-hours. Oldac not satisfied with cleanup efforts, called NYSDOH (Gerry MacDonald). In basement, Burke had tried to fill the 275 AST, which was already full. They blew out the gauge fitting on top of the tank, which caused a 25 gal spill of fuel oil on the solid concrete floor (no drains or cracks noted). Spill was called in by FD. Spill was padded up by FD on the day of the spill (11/8). Several days later, homeowners complained of fuel oil smell in the house. Burke sent in Mark DeBartolo from Envirostar to assess situation, but was not given the go-ahead to do any work. Homeowners were upset with Burke, and were not giving them access to alleviate situation. Spill was cleaned up, but some fuel oil had wicked up a nearby wooden wall, which was the source of the ongoing odor problem. The horizontal wooden planks would need to be removed and replaced. Insurance Co. was also recommending a core sample through the concrete floor at the spill location. Miller Env. was contacted by Oldac, and a rep from Miller was coming on 11/15. H2M was also mentioned as being involved through Allstate Ins. Fans are being used in basement, which makes the oil smell not detectable upstairs, although Oldac claims that it smells strong as soon as they turn them off. dw 12/01/11 Chris Lalak WCHD received closure documentation and has recommended closure of this spill. NFA TG</td>

Spiller Phone: (914) 632-0496
Spiller Extention: Not reported
DEC Region: 3
DER Facility ID: 402070
DEC Memo: 4/4/11 - To retest tank. KAB 4/28/11 Morris called in for follow up. Tank failed again. He said tank top was exposed for most of length and one side and some samples taken. Morris said whoever did repairs, sounds like they only put a new vent riser on. Did not check piping, which is heavily crusted. jc 5-6-11 Failed 2nd retest today. Owner giving Kathy a hard time. Morris will retest again next week. Kathy said road name should be Bayview not Dayview, made change. jc 5/13/11 Tank failed for a 3rd time. Plan to pull, according to Tank Tech. dw 8-4-11 Homeowner called dispatch desk. He wants to remove the tank himself and do ALL of the work. He says he would cut open the tank and clean with speedi dri, dispose of tank at scrap yard, etc. I recommended that he hire an environmental consultant to AT LEAST oversee project because the DEC will need a TCR which would include soil samples, manifests, disposal receipts, etc. I told him that this spill will not be closed out until a proper and acceptable Tank Closure Report has been submitted to this office for review. I told him to contact J O’Dee in White Plains for further info. This guy seems bent on doing everything himself even though it was recommended that he hire a consultant to oversee the project. jm 8/4/11: Recieved call from Sandy Perratta 914-557-0142. He is the same individual who called the dispatch desk earlier today. He is not the propery owner but a friend of the owner. States he is in the construction business and he can remove the tank himself. He states he "has the OSHA 30-hour training" and also states he knows that he "doesn’t need confined space entry training if the tank is less than 4 feet below ground". I again stated he should have a professional contractor do the work for safety reasons. jod 8/8/11: Received voice-mail message from Mr Perratta stating he had removed the tank and it was on the lawn awaiting a “DEC drive-by inspection. I met New Rochelle Fire Captain Henry Senno on site. The tank was cut and cleaned and is on plastic. The excavation is open and is not fenced or secured. There is no evidence of any holes in the tank, and no evidence of any leak or contamination. Captain Senno states he will follow up with the owner, as no permits were filed for the removal as required in New Rochelle. DEC Spills requires no further action at this time. jd 9/8/11: I left this spill open after discussing the situation with Capt Senno on either August 9th or 10th. There was still a 55-gallon drum of heating oil and heating oil sludge that was removed from the tank remaining on the site. On either Aug 11th or 12th I spoke with Mr Perrotta and stated the spill would be left open until he submitted a disposal receipt to DEC for proper disposal of that waste drum. To date, Mr Perrotta has submitted a disposal receipt for the tank (entered in eDocs) but has not submitted a disposal receipt for the drum. jod 9/22/11: Letter from Linda Enes forwarded to DEC. She states she is in possession of the 55-gallon drum, and is using it to fuel a space heater. I called her this morning and she states her husband transported the drum in his pick-up truck from New Rochelle to their home in Dover Plains NY. Letter has been entered into eDocs. DEC requires no further action. jod

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE
NEW ROCHELLE WASTEWATER TREATMENT PLANT (Continued)  1000140878

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

- Date form received by agency: 08/21/1991
  Facility name: TESA TUCK INC
  Classification: Small Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
- Evaluation date: 09/19/1994
  Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
  Area of violation: Not reported
  Date achieved compliance: Not reported
  Evaluation lead agency: State

FINDS:
Registry ID: 110013794938

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Region: 3
DER Facility ID: 402418
DEC Memo: 4-12-11 Spoke with Mike. The plant has been demolished and they will be rebuilding on the current foundation. They were excavating by the outside wall of the foundation for new piping to be installed and came across this dark material. Mike says he did not detect an oil odor in this material but it smelled musty - they were calling this in to cover themselves. I recommended that if there is some doubt about possible petroleum in the material that they take a sample for analysis. They will have their environmental consultant (Code Environmental out of NJ) take a sample and will contact Todd G. with results. Plant super is Al Lepore (cell 914-804-1873). Mike says that Meena (DEC DOW) does frequent inspections at the facility. jm
11/22/11 Remedial Action Report prepared by Code Enviro-Sciences LLC received from Savin Engineers. The report documents the sampling, excavation and disposal of 98.77 tons of SVOC contaminated historic fill from an effluent pipe trench excavation. NFA, TG

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Remarks:**

The spill was reported by the property owner due to elevated levels of MTBE in soil and on the water table. The source is believed to be a neighboring gas station that had a release on 2/20/96. Report to BE FORWARDED TO TODD GHIOSAY IN REGION 3.

Prior to Sept, 2004 data translation this spill Lead_DEC Field was "GHIOSAY" 07/25/96 EPS SUBMITTED G.W. INVESTIGATION WHICH INDICATES THAT SUNOCO IS THE SOURCE OF G.W. CONTAMINATION ON 15 RIVER ST. SEE SPILL # 9514850.

Historical Generators:
Date form received by agency: 01/01/2006
Facility name: CRANE POLYFLOW CO
Classification: Not a generator, verified

Date form received by agency: 07/08/1999
Facility name: CRANE POLYFLOW CO
Classification: Not a generator, verified

Date form received by agency: 03/12/1986
Facility name: CRANE POLYFLOW CO
Classification: Large Quantity Generator

Violation Status: No violations found

Evaluation Action Summary:
Evaluation date: 09/19/1994
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE
Area of violation: Not reported
Date achieved compliance: Not reported
Evaluation lead agency: State

FINDS:
Registry ID: 110004403173

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,
CRANE POLYFLOW CO

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Owner/Operator Summary:

Owner/operator name: Not reported
Owner/operator address: NOT REQUIRED
Owner/operator country: US
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Operator
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

1170 ft. Site 7 of 13 in cluster U

VCP: S105684699

Relative: Higher
Actual: 36 ft.

Program Type: VCP
Site Code: 58938
HW Code: V00570
Site Class: A
SWIS: 6010
Region: 3
Town: New Rochelle (c)
Acres: Not reported
Date Record Added: 3/6/2002 9:52:00 AM
Date Record Updated: 11/26/2010 9:11:00 AM
Updated By: DACROSBY
Site Description: The Cedar Street Former MGP (Con Edison) operated between circa 1863-68 and 1931. The site is located on Cedar Street, between Spring street and Ramada (Sheraton) Plaza in the City of New Rochelle, Westchester County. The site is currently occupied by a car.
CE-CEDAR ST MGP NEW ROCHELLE (Continued)  

Dealership. A site characterization work plan was approved in December 2005. Field work was conducted in 2008 and 2009. SC Data Summary Report in 11/09. RI work plan approved in 09/10. RI field activities anticipated to start in late 2011. (11/10).

Env Problem: The site is a former MGP site that is an active car dealership. Site characterization has found MGP residuals in the subsurface under the car dealership. Nature and extent has not been fully characterized.

Health Problem: DOH has insufficient information to evaluate the potential for human exposures.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include: Incident Tracking, Compliance Assistance, and Compliance Monitoring.

REGISTRY:

Environment Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

MR JALEM RESIDENCE (Continued)

DEC Region: 3
DER Facility ID: 389086
DEC Memo: 4/30/10: Spoke with the owner Mr Jalem. Tank age unknown, he has lived in the house 14 years with the current tank. Test was done for a prospective purchaser. Mr Jalem has ProGuard insurance and has notified his carrier. They have requested a copy of the tank test report from US Tank Tech. Mr Jalem will make arrangements to either retest or remove the tank once a ProGuard claim is filed. jod 5/10/10
Kathy Morgan, US Tank Tech, called to report tank was retested and failed again. mm 6/29/10: Tank pulled by Advanced Environmental. No evidence of a leak found. Closure letter reviewed by DEC and entered into eDocs. Based upon the information provided, no further action is required at this time. jod

Remarks: failed tank test - retest and reevaluate

AD201 OFF-SITE FLAMINGO CLEANERS BROWNFIELDS S110043637
SW 149 NORTH AVENUE N/A
1/4-1/2 NEW ROCHELLE, NY 10801
0.410 mi. Site 1 of 3 in cluster AD
2165 ft. Relative: Higher
0.410 mi. Actual: 89 ft.

Program: BCP
Site Code: 414661

Site Description: This site is the off-site component of the former Flamingo Dry Cleaners site (C360078). The site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. The site itself is a one-story commercial building which includes four stores including the vacant dry cleaners. Surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a college, a medical facility, and a church. Site contamination is a result of the former dry cleaner operations from reported improper management, disposal, and leaks of perchlorethylene (PCE). Completed on-site investigations include a Phase I Investigation in October of 2003 and a Phase II Investigation completed in March of 2004. A Remedial Investigation (RI) was performed in 2006 under a BCA. The RI report was submitted in 2008. PCE has been noted in soil, soil vapor and groundwater under the building. A soil vapor mitigation system was installed in the on-site building as an IRM in January 2008 to address PCE in soil vapor. A referral for off-site work was completed in December 2007 and a SSF RI/FS Work assignment was approved in March 2009. The RI field work was conducted in the summer of 2009 and fall of 2009. Additional round of gw analyses occurred in spring 2010. RI Report currently under review. (01/11)

Env Problem: The primary contaminant of concern at the site is perchlorethylene (PCE) which has been found in on-site soils, groundwater, sub-slab soil vapor and indoor air. Concentrations of other volatile organic compounds (VOCs) including trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE) and 1,1,1 trichloroethane (1,1,1 TCA) also exceeded groundwater standards but to a lesser extent. The site in located in urban area of the City New Rochelle and there are no identified fish and wildlife resources. The extent of off-site contamination is being evaluated by a state funded RI/FS.

Health Problem: Not reported
### Owner/Operator Summary:

- **Owner/operator name:** TAEYOON KIM  
  **Owner/operator address:** 149 NORTH AVE, NEW ROCHELLE, NY 10801

Environmental Interest/Information System
- AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of
FLAMINGO CLEANERS (Continued)

Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

</thead>
<tbody>
<tr>
<td>BCP</td>
<td>335220</td>
<td>The Flamingo Cleaners site is located in an urban area of New Rochelle, Westchester County, at the southeastern corner of the intersection of Clinton Place and North Avenue. Site Features: The site is a one-story commercial building with a full basement. The building is divided into four tenant spaces which include a bar/lounge, beauty salon, and two vacant spaces that previously housed a travel agency and a dry-cleaner. Current Zoning/use(s): The site consists of four retail spaces, two of which are currently occupied. The site is zoned for commercial use. The surrounding land uses include parking lots, commercial establishments, a residential apartment complex, a medical center, and a church. The dry cleaning operation is no longer active and the space is currently vacant. Historical Uses: The existing building was constructed in 1941 and used for retail. Flamingo Cleaners began dry cleaning operations in 1958, and ran until the 2005 when all dry-cleaning equipment was removed. Site contamination is a result of the former dry cleaning operations from improper management, disposal, and leaks of perchloroethylene (PCE). Prior completed investigations include a Phase I Investigation in October of 2003 and a Phase II Investigation completed in March of 2004. The Volunteer entered into a Brownfield Cleanup Agreement in April 2005. Based on the extent of the site contamination, a referral to state superfund for an off-site investigation was completed in December 2007. The groundwater plume was found to be isolated to immediately behind the building and little to no off-site impacts were noted in groundwater, soils, nor in soil vapor. Site Geology/hydrogeology: The site is underlain by glacial till which sits atop highly weathered bedrock. Bedrock ranges from 5 - 22 feet below ground surface. The water table is between 5 - 11 feet below ground surface. Groundwater flow direction dominantly to the south-southeast toward Long Island Sound, however, site specific groundwater flow direction is radial, and seasonally affected.</td>
</tr>
</tbody>
</table>

### Nature and Extent of Contamination:

Based on the investigations conducted to date, the primary contaminant of concern at the site is tetrachloroethylene (PCE or perc), a dry cleaning solvent. PCE has been detected in exceedence of SCGs in on-site soils, soil vapor, on-site indoor air, and on-site groundwater. The off-site investigation to date indicates that there are no off-site impacts. Source area soils contained as much as 1.300 parts per million (ppm) of PCE, which exceeds the 1.3 ppm protection of groundwater soil cleanup objective. Immediately outside of the source area, soil concentrations of PCE ranged from 0.06 ppm - 0.91 ppm and did not exceed the soil cleanup objective for commercial use. PCE in groundwater was found at concentrations ranging from 1,000 parts per billion(ppb) - 19,000 ppb, which greatly exceeds the 5 ppb groundwater standard. PCE concentrations in sub-slab soil gas ranged from 15,700 ug/m3 - 570,000 mg/m3, and PCE in indoor air ranged from 115 ug/m3 - 1,040 ug/m3, exceeding NYDOH ambient air guidance value of 100 ug/m3 PCE. Concentrations of other volatile organic compounds
FLAMINGO CLEANERS (Continued)

(VOCs) including trichloroethene (TCE), 1,2-dichloroethene (1,2-DCE) and 1,1,1 trichloroethane (1,1,1 TCA) also exceeded groundwater standards but to a lesser extent. A state-funded RI/FS of the site was conducted from 2009-2011. The results indicate that the groundwater and soil vapor plumes appear to be limited to immediately below the site. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. There are no special resources identified near the site.

Health Problem:
Direct contact with contaminants in the soil is unlikely because the majority of the site is covered with buildings and pavement. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains water from a different source not affected by this contamination. Volatile organic compounds in groundwater and/or soil may move into the soil vapor (air space within the soil), which in turn may move into overlying building and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. A sub-slab depressurization system (system that ventilate/remove the air beneath the building) has been installed in the on-site building to prevent the indoor air quality from being affected by the contamination in the soil vapor beneath the building. Sampling indicates soil vapor intrusion is not a concern for off-site buildings.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

INDUSTRIAL OVERALL SERVICE CORP.

SHWS S110043643
CBS N/A

Program: HW
Site Code: 413917
Classification: SIGNIFICANT THREAT TO THE PUBLIC HEALTH OR ENVIRONMENT - ACTION REQUIRED.
Region: 3
Acres: .420
HW Code: 360109
Record Add: 5/15/2009 6:01:00 PM
Record Upd: 8/19/2011 1:40:00 PM
Updated By: DACROSBY

Location: Industrial Overall Service Corporation site is located at 10 Bartels Place in the City of New Rochelle, Westchester County, NY. The site is located east of I-95 and west of US-1 (Huguenot Street) and it is bounded by Reylea Place, Bartels Place, Centre Avenue and the Metro North railroad tracks. Site Features: It is 0.42 acres in size and resides on a slightly sloping irregularly shaped parcel. The main site feature includes a six-sided building which occupies the majority of the property and a small parking area located to the south and southwest of the building. The surrounding area is urban with a mix of commercial and residential establishments mixed in between the commercial businesses. Current Zoning/ Uses: This property is zoned commercial use. The building is the location of two active businesses, Industrial Overall Service Corporation and The Working Mans Closet, Inc. The Working Mans Closet business uses the business address of 27 Centre Street. Historic Uses: The Industrial Overall Service Corporation business operated as a uniform and industrial cleaning facility for heavily soiled clothing such as from auto body and gasoline businesses. The Working Mans Closet is engaged in direct factory sales of work clothes both new and reclaimed. The Industrial Overall Service Corporation has operated a cleaning business at this location since 1939 and The Working Mans Closet has been in business since 1980. The prior laundry operations on the site have used various cleaning products in the past. Initial investigation has indicated a release of tetrachloroethylene (PCE) has occurred and contaminated the soil vapor and groundwater. The potential responsible parties did not agree to conduct a remedial program, so in the Spring of 2011 a State Superfund Referral was signed and a RI/FS will be conducted using State Superfunds. Operable Units: Only one operable unit for the site.

Site Geology and
Hydrology: Groundwater is found 10 to 15 feet below grade and flowing in a southwesterly direction.

Env Problem: Nature and Extent of Contamination: Based upon investigations to date, the primary contaminants of concern at the site include tetrachloroethylene (PCE) and its associated breakdown products. PCE was detected in groundwater at the site and downgradient off-site. On-site PCE in groundwater was noted at 5,300 parts per billion (ppb) in a monitoring well located immediately downgradient of the site. The levels of PCE appear to diminish from the 1,000’s of ppb of PCE to non detectable approximately 1000 feet to the southwest of the site. Trichloroethylene (TCE), which is a degradation product of PCE, was also detected in the groundwater both downgradient and on the site. Special Resources Impacted/Threatened: The site is located in an urban area of the City of New Rochelle. No significant environmental resources have been identified near the site to date. Significant Threat: The site present a significant threat to the environment due to the ongoing release of contamination from the site into groundwater and soil vapor.

Health Problem: Direct contact with contaminants in soil and groundwater is unlikely because the majority of the site is covered with buildings and pavement. People are not drinking the contaminated groundwater because the area is served by a public water supply that is not affected by this contamination. Volatile organic compounds in the groundwater or soil may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air of buildings, is referred to as soil vapor intrusion. The potential exists for people to inhale site-related contaminants in indoor air in on- and off-site buildings due to soil vapor intrusion.

Environmental Interest/Information System
NCDB (National Compliance Data Base) supports implementation of the
Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: 5/7/09 At a construction site, contaminated soils were encountered, which was confirmed by soil tests done by Northeast. They will be doing the site remediation and will submit a cleanup report. dw 06/12/09 Northeast Environmental provided oversight activity when petroleum impacted soil was discovered and need to be removed. Remediation consisted of the removal of 425.66 tons of petroleum contaminated soil. Post excavation TAGM soil sample results were all below DEC guidance values. NFA required. TG

Remarks: 1231 The caller advised dispatch North East Environmental will
conduct the clean up. The caller requested a call back. No water ways affected.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### STANDARD ENVIRONMENTAL RECORDS

#### Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA’s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

- **Date of Government Version:** 05/08/2012
- **Source:** EPA
- **Telephone:** N/A
- **Last EDR Contact:** 05/10/2012
- **Next Scheduled EDR Contact:** 07/23/2012
- **Data Release Frequency:** Quarterly

#### NPL Site Boundaries

EPA Region 5 Telephone: 312-886-6686

EPA Region 10 Telephone: 206-553-8665

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

- **Data Release Frequency:** Quarterly

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time.

This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transports are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.
Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 12/30/2011
Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/30/2011
Telephone: 703-603-0695

INDIAN UST R10: Underground Storage Tanks on Indian Land

INDIAN UST R1: Underground Storage Tanks on Indian Land
The Indian Underground Storage Tank (UST) database provides information about underground storage tanks on Indian land in EPA Region 1 (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont and ten Tribal Nations).

FEMA UST: Underground Storage Tank Listing
A listing of all FEMA owned underground storage tanks.

Eng CONTROLS: Registry of Engineering Controls
Environmental Remediation sites that have engineering controls in place.

Inst CONTROL: Registry of Institutional Controls
Environmental Remediation sites that have institutional controls in place.

Res DECL: Restrictive Declarations Listing
A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.
State and tribal voluntary cleanup sites

VCP: Voluntary Cleanup Agreements
New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing
In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a $200 million Environmental Restoration or Brownfields Fund as part of the $1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

Brownfields: Brownfields Site List
A Brownfield is any real property where redevelopment or re-use may be complicated by the presence or potential presence of a hazardous waste, petroleum, pollutant, or contaminant.
ADDITONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup, and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

LOCAL LISTS OF HAZARDOUS WASTE / CONTAMINATED SITES

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEL SHWS: Delisted Registry Sites
A database listing of sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites.

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LOCAL LISTS OF REGISTERED STORAGE TANKS

HIST UST: Historical Petroleum Bulk Storage Database
These facilities have petroleum storage capacities in excess of 1,100 gallons and less than 400,000 gallons. This database contains detailed information per site. It is no longer updated due to the sensitive nature of the information involved. See UST for more current data.
HIST AST: Historical Petroleum Bulk Storage Database
These facilities have petroleum storage capabilities in excess of 1,100 gallons and less than 400,000 gallons.
This database contains detailed information per site. No longer updated due to the sensitive nature of the information
involved. See AST for more current data.

SPILLS: Spills Information Database
Data collected on spills reported to NYSDEC as required by one or more of the following: Article 12 of the Navigation
Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active
as of April 1, 1986, as well as spills occurring since this date.
HIST SPILLS: SPILLS Database
This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous
chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases,
by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing
updates to its original Spills Information Database. This database includes fields that are no longer available
from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of
Environmental Conservation.

Other Ascertainable Records

RCRA-NonGen: RCRA - Non Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation
and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database
includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste
as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous
waste.

DOT OPS: Incident and Accident Data
Department of Transporation, Office of Pipeline Safety Incident and Accident data.

DOD: Department of Defense Sites
This data set consists of federally owned or administered lands, administered by the Department of Defense, that
have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

FUDS: Formerly Used Defense Sites
The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers
is actively working or will take necessary cleanup actions.
CONSENT: Superfund (CERCLA) Consent Decrees
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 12/01/2011
Date Data Arrived at EDR: 01/25/2012

Next Scheduled EDR Contact: 09/24/2012
Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

SSTS: Section 7 Tracking Systems
Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

Data Release Frequency: Quarterly

RADINFO: Radiation Information Database
The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/10/2012  Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/12/2012  Telephone: 202-343-9775
Date Made Active in Reports: 03/01/2012  Last EDR Contact: 04/10/2012
Number of Days to Update: 49  Next Scheduled EDR Contact: 07/23/2012
Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/23/2011  Source: EPA
Date Data Arrived at EDR: 12/13/2011  Telephone: (212) 637-3000
Date Made Active in Reports: 03/01/2012  Last EDR Contact: 06/12/2012
Number of Days to Update: 79  Next Scheduled EDR Contact: 09/24/2012
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.
BRS: Biennial Reporting System
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

HSWDS: Hazardous Substance Waste Disposal Site Inventory
The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

UIC: Underground Injection Control Wells
A listing of enhanced oil recovery underground injection wells.

NY MANIFEST: Facility and Manifest Data
Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a TSD facility.
SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

E DESIGNATION: E DESIGNATION SITE LISTING
The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST:  EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants:  EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.
CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.
Date of Government Version: 05/21/2012
Date Data Arrived at EDR: 05/22/2012
Date Made Active in Reports: 05/31/2012
Number of Days to Update: 9

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data
Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association’s annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics’ primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
   General Topographic Gradient: General ESE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5’ Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROGEOLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE
- **Target Property County**: WESTCHESTER, NY
- **FEMA Flood Electronic Data**: YES - refer to the Overview Map and Detail Map
- **Flood Plain Panel at Target Property**: 36119C - FEMA DFIRM Flood data
- **Additional Panels in search area**: Not Reported

NATIONAL WETLAND INVENTORY
- **NWI Quad at Target Property**: MOUNT VERNON
- **NWI Electronic Data Coverage**: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

**Site-Specific Hydrogeological Data***:
- **Search Radius**: 1.25 miles
- **Status**: Not found

AQUIFLOW®
- **Search Radius**: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.
**GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

**GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY**

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture’s (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Urban land
Soil Surface Texture: Not reported
Hydrologic Group: Not reported
Soil Drainage Class: Not reported
Hydric Status: Unknown
Corrosion Potential - Uncoated Steel: Not Reported
Depth to Bedrock Min: > 0 inches
Depth to Watertable Min: > 0 inches
No Layer Information available.

Soil Map ID: 2

Soil Component Name: Water
Soil Surface Texture: Not reported
Hydrologic Group: Not reported
Soil Drainage Class: Not reported
Hydric Status: Unknown
Corrosion Potential - Uncoated Steel: Not Reported
Depth to Bedrock Min: > 0 inches
Depth to Watertable Min: > 0 inches
No Layer Information available.

Soil Map ID: 3

Soil Component Name: Water
Soil Surface Texture: Not reported
Hydrologic Group: Not reported
Soil Drainage Class: Not reported
Hydric Status: Unknown
Corrosion Potential - Uncoated Steel: Not Reported
Depth to Bedrock Min: > 0 inches
Depth to Watertable Min: > 61 inches
No Layer Information available.

---

**Soil Map ID: 4**

Soil Component Name: Urban land
Soil Surface Texture: Not reported
Hydrologic Group: Not reported
Soil Drainage Class: Somewhat poorly drained
Corrosion Potential - Uncoated Steel: Not Reported
Depth to Bedrock Min: > 77 inches
Depth to Watertable Min: > 0 inches
No Layer Information available.

---

**Soil Map ID: 5**

Soil Component Name: Udorthents
Soil Surface Texture: gravelly loam
Hydrologic Group: Not reported
Soil Drainage Class: Somewhat poorly drained
Hydric Status: Not hydric
Corrosion Potential - Uncoated Steel: Not Reported
Depth to Bedrock Min: > 127 inches
Depth to Watertable Min: > 38 inches

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

HYDROGEOLOGIC INFORMATION

AQUIFLOW Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture’s (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

The EDR Environmental LienSearch™ Report

Environmental Data Resources Inc

440 Wheelers Farms Road
Milford, CT 06461
800.352.0050
www.edrnet.com
The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

• search for parcel information and/or legal description;
• search for ownership information;
• research official land title documents recorded at jurisdictional agencies such as recorders’ offices, registries of deeds, county clerks’ offices, etc.;
• access a copy of the deed;
• search for environmental encumbering instrument(s) associated with the deed;
• provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
• provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

15-67
THIS DEED made the 22nd day of September, Nineteen Hundred and Ninety-Three (1993)

BETWEEN

HOWARD RATTNER, residing at 80 Surey Drive, New Rochelle, New York, Commissioner of Finance and Collecting Officer of the City of New Rochelle, New York, in the action hereinafter mentioned,

Party of the first part, and

CITY OF NEW ROCHELLE, a domestic municipal corporation, duly organized pursuant to the laws of the State of New York, located at City Hall, 515 North Avenue, New Rochelle, New York,

Party of the second part

WITNESSETH:

That the Party of the first part duly designated to make this conveyance by virtue of a judgment entered in the County Court of Westchester County, index no. 92-09423 on an action entitled:

"IN THE MATTER OF FORECLOSURE OF TAX LIENS PURSUANT TO ARTICLE 11, TITLE 3 OF THE REAL PROPERTY TAX LAW BY THE CITY OF NEW ROCHELLE"

which action was brought to foreclose tax liens which on the 31st day of May, 1992 had been due and unpaid for a period of at least two years or more from the date when the same became a lien and in pursuance of the aforesaid judgment filed and entered at a Special Term of the County Court of Westchester County does hereby grant and convey unto the party of the second part:

ALL that certain plots, pieces, lots or parcels of land, with any buildings and improvements thereon erected, situate, lying and being in the City of New Rochelle, County of Westchester and State of New York, being designated and described as follows:

Parcel #1 SERIAL NO. 11 - SECTION 1, BLOCK 84, LOT 69

Shown as Lot No. 47 and part of Lot No. 46 and also all of the parcel marked "Right-of-Way" and part of the parcel marked "Elizabeth W. Huntington", as shown as "Map of Property belonging to Estate of L.D. Huntington, Dec'd." made by W.H. Hayes, October 20, 1910 and filed in the County Clerk's Office, Division of Land Records, formerly Register's Office, Westchester County, New York, on January 6, 1911 as Map Volume 33 at page 41, said premises being more particularly bounded and described as follows:

BEGINNING at a point on the Easterly side of Echo Avenue distant 262.50 feet southerly as measured along the same from its intersection with the Southerly side of Main Street;

Thence from said point or place of beginning, North 64 degrees 00' 00" East 150.22 feet to the Westerly side of Evans Street as shown on said map;

Thence along the westerly side of said Evans Street as shown on said map and along a line in continuation southerly thereof, South 26 degrees 00' 00" East 194.06 feet to a point;

Thence South 70 degrees 06' 00" West 151.07 feet to the easterly side of Echo Avenue;
Thence North along Easterly side of Echo Avenue 178.0 feet to the place of BEGINNING.

TOGETHER with an easement of Right-of-Way to use in common with others for a width of 30 feet next adjoining on the East the extension Southerly of the Westerly side of Evans Street as shown on the aforesaid map from the Southerly line of Evans Street as shown on the map Southerly to part of the northerly line of the premises herein described.

Also known as on the official tax map in the City of New Rochelle as Section 1, Block 84, Lot 69.

Parcel #2

SERIAL NO. 12 - SECTION 1, BLOCK 84, LOT 100
and SERIAL NO. 13 - SECTION 1, BLOCK 84, LOT 110
(both merged into Lot 110)

BEGINNING at a point on the Southerly side of Huntington Place distant 212.14 feet easterly from the corner formed by the intersection of the Easterly side of Evans Street and the Southerly side of Huntington Place;

RUNNING THENCE North 61 degrees 10 minutes 06 seconds East, 223.01 feet to a point;

THENCE South 34 degrees 16 minutes 00 seconds East, 258.72 feet to a point;

THENCE South 70 degrees 06 minutes 00 seconds West, 135.71 feet to a point the dividing line of land now or formerly of Westchester Lighting Company;

THENCE along said dividing line North 19 degrees 54 minutes 00 seconds West 10.00 feet (15.00 feet, deed) and South 70 degrees 06 minutes 00 seconds West, 126.77 feet to the dividing line of land now or formerly of Standard Oil Company of New York;

THENCE along said dividing line North 26 degrees 00 minutes 00 seconds West, 207.17 feet to the Southerly side of Huntington Place, the point or place of BEGINNING.

Said premises also known as Section 1, Block 84, Lot 110 on the official tax assessment map of the City of New Rochelle.

Parcel #3

SERIAL NO. 15 - SECTION 1, BLOCK 110, LOT 95

Shown and designated as Lot No. 95 in Block 115 on a certain map entitled "Section Two and Three Map of the Isle of Sans Souci, Davenport Neck, New Rochelle, Westchester County, N.Y." dated December 5, 1960 and filed in the Office of the Clerk of the County of Westchester, Division of Land Records on March 3, 1961 as Map No. 12719, and more particularly bounded and described as follows:

Also known as Section 5, Block 1416, Lot 3 on the tax map of the City of New Rochelle.

Parcel #31  SERIAL NO. 129 - SECTION 5, BLOCK 1425, LOT 50

Being a portion of Lot No. 53 on a certain map entitled "Map of land known as the Winthrop Property, situated in New Rochelle, New York", made by Horace Crosby, Civil Engineer, dated May 1886 and filed in the County Clerk's Office, Division of Land Records, formerly Register's Office, Westchester County, New York, on June 24, 1886, as Map No. 760 and which part of said lot is more particularly bounded and described as follows:

BEGINNING at a point on the Northerly side of Horton Avenue,
distant 110 feet Easterly from the corner formed by the intersection of said Northerly side of Horton Avenue with the Easterly side of Brook Street; RUNNING thence from said point of beginning along the Easterly side of Lot No. 54 on said map, North 5 degrees 9 minutes 30 seconds West 100 feet to land conveyed by Caroline Bunel to Sophie E. Hubbell, by deed recorded in Liber 2455 of Deeds, at page 100; THENCE on a line parallel with the Northerly side of Horton Avenue; North 84 degrees 50 minutes 40 seconds East 19 feet to the beginning of a curved line concaved to the Southwest; THENCE Easterly and Southerly along the arc of said curved line having a radius of 15 feet a distance of 23.56 feet; THENCE South 5 degrees 9 minutes 30 seconds East (the last 3 courses being along the land conveyed to Sophie E. Hubbell) 85 feet to the Northerly side of Horton Avenue; THENCE along the Northerly side of Horton Avenue, South 84 degrees 50 minutes 30 seconds West 34 feet to the point or place of BEGINNING.

Said premises are designated as Section 5, Block 1425, Lot 50, on the Tax Assessment Map of the City of New Rochelle, New York.

Parcel #32

**SERIAL NO. 140 - SECTION 5, BLOCK 1484, LOT 22**

Known and designated as Lots Nos. 414, 415 and 416 in Block "J" on a certain map entitled "Map of Winyahwood, situate partly in the City of New Rochelle and partly in the Town of Pelham, Westchester Co., N.Y., property belonging to Chatsworth Realty Co., Ind., Subdivisions 1, 2 and 3" made by Edward F. Campbell, E.B. and S., March 7, 1925 and filed in the Office of the Register of Westchester County (now County Clerk, Division of Land Records) on December 3, 1925 as Map Number 2933, which said plot is bounded and described as follows:

BEGINNING at a point on the Northerly side of Vaughan Avenue, distant 400 feet westerly from the westerly end of curve with a radius of 20 feet connecting the said northerly side of Vaughan Avenue with the westerly side of Glenwood Avenue, and which point is at the intersection of said northerly side of Vaughan Avenue with the division line between Lots Nos. 413 and 414 in Block J, as shown on said map and;

RUNNING THENCE northerly along said division line between Lots Numbers 413 and 414 in Block J, North 14 degrees 09 minutes 14 seconds West, 130 feet to the southeasterly corner of Lot Number 443 on Block J as shown on said map;

THENCE Westerly, along the division line between Lots Numbers 440 to 445 inclusive, and Lots Numbers 414 to 416 inclusive, in Block J, South 75 degrees 50 minutes 45 seconds West, a distance of 60 feet;

THENCE Southerly along the division line between Lots Numbers 416 and 417, South 14 degrees 09 minutes 14 seconds East, a distance of 130 feet to the northerly side of Vaughan Avenue, and;

THENCE Easterly, along the said northerly side of Vaughan Avenue, North 75 degrees 50 minutes 46 seconds East, a distance of 60 feet to the point or place of BEGINNING.

Also known as Section 5, Block 1484, Lot 22 on the official tax map of the City of New Rochelle.

Parcel #33

**SERIAL NO. 141 - SECTION 5, BLOCK 1490, LOT 2**

On the official tax assessment map of City of New Rochelle, above described as follows: Being that portion of Lots 122 & 123 on "Map of Heisser Property" filed in Vol. 23 P. 24.

Also known as Section 5, Block 1490, Lot 2 on the official tax map of the City of New Rochelle.
Parcel #34  SERIAL NO. 142 - SECTION 5, BLOCK 1490, LOT 5

On the official tax assessment map of City of New Rochelle; also described as follows: That portion of Lot 118 on "Map of Heisser Property" filed in Vol. 23 P. 24.

Also known as Section 5, Block 1490, Lot 5 on the official tax map of the City of New Rochelle.

Parcel #35  SERIAL NO. 143 - SECTION 5, BLOCK 1490, LOT 7

On the official tax assessment map of City of New Rochelle, which 2 lots together are also described as follows: Being that portion of Lots 5, 6 & 7 on "Map of North Pelham Subdivision" filed in Vol. 9 P. 107.

Also known as Section 5, Block 1490, Lot 7 on the official tax map of the City of New Rochelle.

Parcel #36  SERIAL NO. 147 - SECTION 5, BLOCK 1534, LOT 147

On Official Tax Assessment Map of City of New Rochelle, also described as follows: That strip of land lying S of Lots 15 & 20 as shown on "Map of property belonging to Thomas H. Robinson" filed 4/19/1917, in Vol. 47 P. 12; N of Lots 7 & 19 as shown on "Map of Fanueil Place," filed 2/14/1907, in Vol. 24 P. 53; bounded on W by Fanueil Place and on E by Clinton Avenue.

Also known as Section 5, Block 1534, Lot 147 on the official tax map of the City of New Rochelle.

Parcel #37  SERIAL NO. 148 - SECTION 5, BLOCK 1546, LOT 16

BEGINNING at a point on the Easterly side of Fern St., 300.0 feet more or less North of the corner formed by the North side of Mayflower Avenue and the East side of Fern St., thence on a curve to the left along the East side of Fern St. 115.0 feet more or less; thence East 20.0 feet; thence South 113.14 feet to the East side of Fern St. the point or place of BEGINNING. Also known as Block 1546, Lot 16 on the Official Tax Map of the City of New Rochelle.

On the Official Tax Assessment Map of the City of New Rochelle and also known and designated as portion of Jefferson Place, now Rotuno Place on "Map of Subdivision of Lot 6 of Huguenot Park, New Rochelle, N.Y., property belonging to J. & A. Walter and H.B. Downey" filed December 2, 1909 in Volume 30 of Maps at page 29 and more particularly bounded and described as follows:

Also known as Section 5, Block 1546, Lot 16 on the official tax map of the City of New Rochelle.

Parcel #38  SERIAL NO. 149 - SECTION 5, BLOCK 1546, LOT 16B

BEGINNING at a point on the Northerly side of Jefferson Place, now Rotuno Place, where the dividing line of Lots 9 & 10 intersects said Northerly side of Jefferson Place, now Rotuno Place, running thence Easterly N 85 degrees 57' 20" E 40 feet to a point, thence Southerly S 4 degrees 00' 10" E 50 feet to a point; thence Westerly S 85 degrees 57' 20" W 18.16 feet to a point; thence on a curve to the left having a radius of 325 feet and a distance of 38 feet more or less to a point of reverse curve, thence on a curve to the right having a radius of 275 feet and a distance of 16 feet more or less to the point or place of beginning.

Also known as Section 5, Block 1546, Lot 16B on the official tax map of the City of New Rochelle.
Parcel #39  SERIAL NO. 151 - SECTION 5, BLOCK 1630, LOT 52

Being designated on the official tax assessment map of the City of New Rochelle as part of Lot 15 and part of Lot 16 in Block "O" on map of Highland Park, New Rochelle, New York property of James A.S. Gregg, subdivision 4 and filed in the Office of the Clerk of the County of Westchester, Division of Land Records on the 15th day of February 1896, as Map No. 1184 and which parts of said lots are more particularly bounded and described as follows:

BEGINNING at a point on the division line of Lots 28 and 29
which is 115.97 feet Northerly from the Northerly side of Pengilly
Drive, running thence Northerly along the said division line N 19
degrees 41' W 6.72 feet to a point, thence through Lot 29 100.01
feet to a point on the division line of Lots 29 & 30, thence
Southerly along said division line S 19 degrees 41' E 5.82 feet to
a point on the Southerly boundary line of Reserved Strip, thence
Westerly along said Southerly line of Reserved Strip 100 feet to
the point or place of beginning.

Also known as Section 6, Block 2528, Lot 8A on the official
tax map of the City of New Rochelle.

Parcel #44 SERIAL NO. 178 - SECTION 7, BLOCK 2601, LOT 279

On the official tax assessment map of the City of New Rochelle
and more particularly bounded and described as follows: BEGINNING
at a point on the Easterly side of Van Meter Pews distant 200 feet
Southerly from the Southerly end of a curve having a radius of 20
feet and a length of 17.30 feet connecting the Southerly side of
Taymill Road with the East side of Van Meter Pews which point of
beginning is where the Southerly side of Lot 42 on "Map of
Northridge - Section 2" filed in the office of the Clerk of the County
of Westchester, Division of Land Records on the 25th day of
February, 1929 in Volume 68 of Maps at page 73 intersects the
Easterly side of Van Meter Pews; running thence N 59 degrees, 28'
41" E 151.20 feet to the Westerly side of Lot 45 on said map;
thence southerly along the westerly side of Lot 45 on said map 1.5
feet to the Northerly boundary line of Lot 43 on said map; thence
Southwesterly along said North boundary line of Lot 43 on said map
151.08 feet to the Easterly side of Van Meter Pews; thence
Northerly along the Easterly side of Van Meter Pews 1.4 feet to the
point or place of beginning.

Also known as Section 7, Block 2601, Lot 279 on the official
tax map of the City of New Rochelle.

Parcel #45 SERIAL NO. 179 - SECTION 7, BLOCK 2696, LOT 43

Known and designated as Lot No. 63 as shown on a certain map
entitled, "Subdivision Map of Section Three, Bonnie Cress No. 3 in
the City of New Rochelle, Westchester County, N.Y.", dated May 26,
1958 made by M.C. Tomasetti, Surveyor, and filed in the County
Clerk's Office of Westchester County, Division of Land Records, on
February 26, 1959 as Map No. 1189, and bounded and described
according to said map as follows:

BEGINNING at a point on the Southeasterly side of Rolling Way,
where the same is intersected by the dividing line between Lots Nos. 62 and 63 as shown on the above entitled map; running thence along the said dividing line, South 55 degrees 30' 00" East 127.028 feet to the rear line of said Lot No. 63; running thence along said rear line, North 31 degrees 01' 34" East 100.18 feet to the dividing line between Lot Nos. 63 and 64 as shown on said map; running thence along the last mentioned dividing line, North 55 degrees 30' West 120.96 feet to the aforesaid Southeasterly side of Rolling Way; and running thence along the same, South 34 degrees 30' 00" West 100.00 feet to the point and place of BEGINNING.

Also known as Section 7, Block 2696, Lot 43 on the official tax map of the City of New Rochelle.

Parcel #46  SERIAL NO. 180 - SECTION 7, BLOCK 2696, LOT 51A

STARTING at the Northwesterly corner of Lot 65 on Rolling Way, thence Southeast 110.26 feet to point of beginning; thence Southeast 102 feet, thence Southwest 101 feet, thence Northwest 100 feet and thence Northeast 100.18 feet to the point of BEGINNING.

Also known as Section 7, Block 2696, Lot 51A on the official tax map of the City of New Rochelle.

Parcel #47  SERIAL NO. 181 - SECTION 7, BLOCK 2696, LOT 55A

STARTING at the Southwest corner of Lot 66 on Rolling Way, thence Southeast 110.26 feet to place of beginning; thence Southeast 102 feet, thence Northeast 18 feet and Northeast 86 feet, thence Northwest 101 feet and thence Southwest 100.18 feet to the place of BEGINNING.

Also known as Section 7, Block 2696, Lot 55A on the official tax map of the City of New Rochelle.

Parcel #48  SERIAL NO. 184 - SECTION 7, BLOCK 2760, LOT 25A

BEGINNING at a point on the Southerly side of Saldo Circle 178.43 feet East of the end of a curve connecting the East side of Robert Drive South with the South side of Saldo Circle; thence South 122.11 feet to the point or place of BEGINNING; thence Southeast 109.33 feet; thence Southwest 8.0 feet; thence Northwest 107.10 feet; thence North 13.71 feet to the point or place of BEGINNING. Also known as Block 2760, Lot 25A on the Official Tax Map of the City of New Rochelle.

Also known as Section 7, Block 2760, Lot 25A on the official tax map of the City of New Rochelle.

Parcel #49  SERIAL NO. 186 - SECTION 7, BLOCK 2840, LOT 13

BEGINNING at a point on the West side of Winding Brook Road 269.39 feet North of the end of a curve connecting the North side of Tulip Lane with the West side of Winding Brook Road; thence West 110.0 feet to the point or place of BEGINNING; thence West 30.0 feet thence North 112.0 feet more or less; thence East 30.0 feet; thence South 108.83 feet to the point or place of BEGINNING. Also known as Block 2840, Lot 13 on the Official Tax Map of the City of New Rochelle.

Also known as Section 7, Block 2840, Lot 13 on the official tax map of the City of New Rochelle.

Parcel #50  SERIAL NO. 187 - SECTION 7, BLOCK 2840, LOT 17

BEGINNING at a point on the West side of Winding Brook Road 366.08 feet North of the end of a curve connecting the North side
of Tulip Lane with the West side of Winding Brook Road; thence West 110.0 feet to the point or place of BEGINNING; thence West 30.0 feet; thence North 114.0 feet more or less; thence East 30.0 feet; thence South 108.84 feet to the point or place of BEGINNING. Also known as Block 2840, Lot 17 on the Official Tax Map of the City of New Rochelle.

Also known as Section 7, Block 2840, Lot 17 on the official tax map of the City of New Rochelle.

Parcel #51 SERIAL NO. 190 - SECTION 7, BLOCK 3041, LOT 43

Designated as Lot 42 on "Map of White Birches, Section 1, dated September 22, 1953" filed in Westchester County Clerk's Office, Division of Land Records, March 5, 1954, as Map Number 8886.

LEONARD N. SANO
WESTCHESTER COUNTY CLERK
The People of the State of New York, by the Grace of God, Free and Independent,

TO ALL TO WHOM THESE PRESENTS SHALL COME, GREETING:

know ye, That pursuant to Sections 25 and 34 of the Public Lands Law and Findings of the Commissioner of General Services dated July 24, 1997 and in consideration of the sum of One Dollar ($1.00), and other good and valuable consideration, paid by the CITY OF NEW ROCHELLE, a New York municipal corporation having its principal office and place of business at 515 North Avenue, New Rochelle, New York 10801, we have granted and conveyed and by these presents do hereby grant and convey unto the said CITY OF NEW ROCHELLE, its successors and assigns forever, for park, recreation, street and highway purposes, including incidental, necessary municipal business in conjunction therewith, all the right, title and interest of THE PEOPLE OF THE STATE OF NEW YORK in and to the following:

ALL THAT CERTAIN PIECE OR PARCEL OF LAND situated in the City of New Rochelle, County of Westchester, and State of New York, being further described as follows:

BEGINNING at a point on the southerly side of East Main Street at its intersection with the division line between the lands of the People of the State of New York, on the east, and lands now or formerly of Anthony Petro, on the west, said point being distant S. 29° 51' W., 304.28 feet from New Rochelle City Monument No. 4 which is located at the northwesterly corner of the intersection of Pratt and Huguenot Streets; thence N. 52° 02' 34" E., along the southerly bounds of East Main Street, 200 feet to a point in the westerly bounds of lands, now or formerly, owned by the City of New Rochelle, said point being distant S. 02° 32' 30" E., 141.02 feet from the aforesaid Monument No. 4; thence S. 43° 23' 32" E., along the westerly bounds of said lands of the City of New Rochelle, 635 feet to a point in the original high water line of New Rochelle Harbor (formerly called Snuff Mill Pond); thence S. 52° 02' 34" W., generally along said high water line, 200 feet to a point at the southeast corner of lands, now or formerly, of the Colonial Sand and Stone Company, Inc.; thence N. 43° 23' 32" W., along the easterly bounds of said lands of the Colonial Sand and Stone Company, Inc.; 327.55 feet to a point; thence N. 52° 28' 17" W., continuing along the easterly bounds of said lands of Colonial Sand and Stone Company, Inc., 57.92 feet to a point in the southerly bounds of lands, now or formerly, of Harvey A. Turnure (designated as Lot 45); thence N. 52° 02' 34" E., along the southerly bounds of said lands of Turnure, 9.18 feet to a point, thence N. 43° 23' 32" W., along the easterly bounds of lands of said Turnure and then continuing along the easterly bounds of the aforesaid lands of Anthony Petro, 251.12 feet to the point and place of beginning, containing 2.908 acres of land, more or less.

The above described parcel is shown on a map entitled “Boundary Map of New York State Armory at City of New Rochelle, Westchester County” prepared by the New York State Department of Public Works from surveys dated September 1933 and December 1934.
Intending to convey the following three parcels of land, together with all rights, reservations, and restrictions that may appear therein by the following three deeds:

1. Deed from the City of New Rochelle to the People of the State of New York dated September 4, 1930, recorded in the Westchester County Clerk's Office in Liber 3210 of Deeds at page 274.

2. Deed from the City of New Rochelle to the People of the State of New York dated January 31, 1933, recorded in the Westchester County Clerk's Office in Liber 3333 of Deeds at page 251.

3. Deed from Colonial Sand and Stone Company, Inc. to the People of the State of New York dated June 3, 1935, recorded in the Westchester County Clerk's Office in Liber 3448 of Deeds at page 159.

Reserving to the People of the State of New York the right of public access across an area approximately 20 feet wide along the shoreline adjacent to the New Rochelle Harbor.

This grant is made and accepted upon the condition that said premises shall be improved and maintained for park, recreation, street and highway purposes, including incidental, necessary municipal business in conjunction therewith. In the event that said premises are not improved and maintained for park, recreation, street and highway purposes, including incidental, necessary municipal business in conjunction therewith, the title hereby conveyed shall revert to The People of the State of New York and the Attorney General may institute an action in the Supreme Court for a judgment declaring a revesting of such title in the State.

EXCEPTING AND RESERVING to ourselves all gold and silver mines.

TO HAVE AND TO HOLD the above described premises unto said CITY OF NEW ROCHELLE, its successors and assigns forever, except as aforesaid.
IN WITNESS WHEREOF our First Deputy Commissioner of General Services has executed these letters patent in our name this 24th day of July, 1997.

RPPU-719 (6/88)
and all the estate and rights of the party of the first part, in and to, the said premises, TO HAVE AND TO HOLD, the above-granted premises, unto the said party of the second part, his heirs and assigns forever. THE PURCHASER under this conveyance resides as follows: in the town of White Plains, County of Westchester, and State of New York, AND the said party of the first part covenants with the said party of the second part as follows: FIRST, that the said party of the first part is seized of the said premises in fee simple, and has good right to convey the same; SECOND, that the party of the second part shall quietly enjoy the said premises; THIRD, that the said premises are free from encumbrances, EXCEPT AS Aforesaid; FOURTH, that the said party of the first part will execute or procure any further necessary assurance of the title to said premises.

FIFTH, that the said party of the first part will forever warrant the title to the said premises. IN WITNESS WHEREOF, the said party of the first part, has caused these presents to be signed by its President, and its corporate seal to be hereto affixed, the day and year first above written.

In presence of

R. H. E. Howe, Jr., CLERK,

the said instrument was acknowledged by the said party of the first part, before me personally came Robert E. Parley, to me known, who being by me duly sworn, did depose and say that he resides in the town of White Plains, Westchester County, N.Y.; that he is President of Gedney Farm Company, Inc., the corporation described in and which executed the foregoing instrument; that he knows the seal of said corporation; that the seal affixed to said instrument is such corporate seal; that it was so affixed by order of the Board of Directors of said corporation; and that he signed his name thereto by order.

R. H. E. Howe, Jr., Notary Public, in & for Westchester County, N.Y.

The foregoing instrument was endorsed for record as follows: The property affected by this instrument is situated in the town of White Plains, in the County of Westchester, N.Y.

A true copy of the original deed and acknowledgment thereof recorded January 4, 1916, at 3:30 P.M.

JOHN F. LAMBDEN, AND W.

CITY OF NEW ROCHELLE, N.Y., TO THE PURCHASER OF THE ABOVE-SPEAKEN CONVEYANCE, GREET.

THIS INDENTURE, Made the 28th day of December, in the year one thousand nine hundred and fifteen, BETWEEN JOHN F. LAMBDEN and LAURA L. LAMBDEN, his wife, residing at No. 54 Locust Avenue, in the City of New Rochelle, in the County of Westchester and State of New York, parties of the first part, and CITY OF NEW ROCHELLE, N.Y., a municipal corporation duly organized under and pursuant to the laws of the State of New York, party of...
the second part; WITNESSETH, that the said parties of the first part, in consideration of ONE ($11.00) DOLLAR, lawful money of the United States, AND OTHER GOOD AND VALUABLE CONSIDERATIONS, paid by the party of the second part, do hereby grant and release unto the said party of the second part, its successors and assigns forever, ALL that certain lot, piece or parcel of land, with the buildings and improvements thereon erected, situate, lying and being in the city of NEW ROCHELLE, County of Westchester, and State of New York, bounded and described as follows:

BEGINNING at a point on the southerly side of Main Street, distant thirty (30) feet westerly as measured along said southerly side of Main Street from a point therein designated by the projection of a line running on a course of north thirty-four (34) degrees, eighteen (18) minutes and twenty (20) seconds west along the face of the present automobile factory foundation wall; running thence said first mentioned point along the southerly side of said Main Street, south fifty-nine (59) degrees, twenty-five (25) minutes and ten (10) seconds west one hundred and eighty-five (185) feet to other land now or late of Clifford Bonneville, deceased; thence south sixteen (16) degrees, fifty-five (55) minutes and ten (10) seconds east along said lands, two hundred and forty-two and 75/100 (242.75) feet to the northeasterly corner of land conveyed by Clifford Bonneville to David F. Davids and Louisa A. Davids his wife; thence along the easterly boundary line of said last mentioned lands, south thirty-five (35) degrees, fifty-five (55) minutes and twenty (20) seconds east, three hundred and sixty-two (362) feet to the highwater mark of Loch Bay; thence north eleven (11) degrees, forty-seven (47) minutes east, two hundred and ten (210) feet to the northerly corner of the present dock; thence north five (5) degrees, forty-seven (47) minutes and ten (10) seconds east, one hundred and ninety-five (195) feet to a stone in the mud flats; thence north thirty-four (34) degrees, eighteen (18) minutes, twenty (20) seconds west, one hundred and fifty (150) feet; thence south fifty-nine (59) degrees, twenty-five (25) minutes and ten (10) seconds west, thirty (30) feet to the mean highwater line; thence north thirty-four (34) degrees, eighteen (18) minutes and twenty (20) seconds, west one hundred and thirty-four and 75/100 (134.75) feet to the place of beginning.

Together with all upland and land under water as per title deeded to Clifford Bonneville by the Metropolitan Improvement Company, being the same premises conveyed by Frank G. Schrenkisen to the parties of the first part hereto, by deed bearing date the 19th day of June, 1911, and duly recorded in the office of the Register of the County of Westchester, in Liber 2004 of Deeds, at page 394, on the 18th day of November, 1912, SUBJECT to a certain easement over and upon said premises as granted by Clifford Bonneville, to the City of New Rochelle, for sewer purposes.

SUBJECT to covenants and restrictions of record affecting said premises. And the said party of the second part, for itself, its successors and assigns, by the acceptance of this deed, does hereby covenant to and with the said parties of the first part, their
heirs and assigns, that neither the said party of the second part, nor its successors or assigns shall ever at any time hereafter erect, maintain, operate or permit upon the above described premises, any sewer disposal works or garbage incinerator plant, TOGETHER with all the appurtenances and all the estate and rights of the said parties of the first part, in and to the said premises, TO HAVE AND TO HOLD, the above granted premises, unto the said party of the second part, its successors and assigns forever, SUBJECT, however, as aforesaid AND the said parties of the first part, do covenant with said party of the second part as follows:

FIRST, that the said parties of the first part, are seized of the said premises in fee simple, and have good right to convey the same.

SECOND, that the party of the second part, shall quietly enjoy the said premises.

THIRD, that the said premises are free from encumbrances, EXCEPT as aforesaid.

FOURTH, that the parties of the first part will execute or procure any further necessary assurance of the title to said premises.

FIFTH, that the said parties of the first part will forever warrant the title to said premises.

Witness WHEREOF, the said parties of the first part, have hereunto set their hands and seals, the day and year first above written.

In the presence of,

John E. Lambden
L. S.

Frank G. Schrenkeisen, Notary Public, Westchester Co., N. Y.

The foregoing instrument was endorsed for record as follows: The property affected by this instrument is situate in the city of New Rochelle, in the County of Westchester, N. Y.

A true copy of the original Deed and acknowledgment thereof recorded January 4, 1916, at 9 A.M.,

CLARA VAIL BROOKS.

TO,

THE LORENA COMPANY,

This indenture, made the 16th day of December, in the year nineteen hundred and fifteen, BETWEEN THE LORENA COMPANY, a domestic corporation, having its principal place of business at Ardsley on the Hudson, Westchester County, New York, party of the first part, and CLARA VAIL BROOKS, who resides at Westchester Avenue and Bellevue Place, in the Village of Irvington, Westchester County, New York, party of the second part, WITNESSETH, that...
THIS INDEBTURE, made the 31st day of July, nineteen hundred and seventy-three, BETWEEN Frost Sand & Gravel Corp., a New York corporation having its office at 40 Huntington Place, New Rochelle, New York, party of the first part, and Alliance Corporation, a New York corporation having its office at 10 Norman Drive, Rye, New York, party of the second part, WITNESSETH, that the party of the first part, in consideration of Ten ($10.00) dollars, lawful money of the United States, and other valuable consideration paid by the party of the second part, does hereby grant and release unto the party of the second part, the heirs or successors and assigns of the party of the second part forever, ALL that certain parcel of land situated in the City of New Rochelle, Westchester County, New York, shown and designated as Lots Numbers Nineteen (19), Twenty (20), Thirty-nine (39), Forty (40), Forty-one (41), Forty-two (42), Forty-three (43), Forty-four (44) and Forty-five (45) on a certain map filed in the Westchester County Register's (now County Clerk's) office entitled "Map of Property Belonging to Estate of L. D. Huntington, Dec'd. New Rochelle, N. Y.," made by W. L. Hayes, Surveyor, October 20th, 1910, which lots taken together in one parcel by reference to map are more particularly bounded and described as follows:

BEGINNING at a point in the southerly side of Main Street, which point is intersected by the boundary line between Lots Numbers Eighteen (18) and Nineteen (19) on said map, and running from said point of beginning in a southerly direction along said boundary line, one hundred and twenty-five (125) feet to Lot No. 40; thence in a westerly direction along the northerly boundaries of Lots Nos. 40 and 39 on said map, Fifty (50) feet to Lot No. 38 on said map; thence again in a southerly direction along the easterly boundary line of said Lot No. 38, One hundred and twenty-five (125) feet to the northerly side of Huntington Place shown on map; thence in an easterly direction along said northerly side of Huntington Place and along a part of the northerly boundary of Lot No. 49 on said map, One hundred eighty-three and eight hundredths (183.08) feet to land shown on map as "Louise A. Davida"; thence in a northerly direction along last named land, One hundred twenty-five and fifty-six hundredths (125.56) feet to the rear or southerly boundary line of Lot No. 22 on said map; thence in a westerly direction along the southerly boundary line of Lots Nos. 22 and 21 on said map, Seventy-one and nineteen hundredths (71.19) feet to the easterly boundary line of Lot No. 20 on said map; thence in a northerly direction along said Lot No. 20, One hundred and twenty-five (125) feet to Main Street aforesaid, and thence westerly along Main Street Fifty (50) feet to the point or place of beginning.
TOGETHER with all the right, title and interest of the party of
the first part hereof, of, in and to Main Street and Huntington
Place in front of and immediately adjacent to the premises above
described, to the center lines of said highways.

ALSO GRANTING AND CONVEYING an easement in and right of way over
Huntington Place to its connection with Evans Street as shown on
map, and also in Evans Street from Huntington Place to Main Street
as shown on map, to be used for all usual purposes of a highway.
TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

AND the party of the first part covenants that the party of the first part has not done or suffered anything whereby the said premises have been encumbered in any way whatever, except as aforesaid.

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

IN PRESENCE OF:

[Signature]

Freedom of Information Law
Letters and Responses
June 22, 2012

Bennie F. Giles, III
City Clerk and Records Access Officer
515 North Avenue
Office of the City Clerk
New Rochelle, New York 10801

Re: Freedom of Information Request
New Rochelle Department of Public Works Facility (City Yard)
224 East Main Street or U.S. Route 1
(a.k.a. 220 and 229 East Main Street or U.S. Route 1)
New Rochelle, New York 10801
Owner: City of New Rochelle
Legal Code: Section 1 - Block 84 – Lot 5

Dear Mr. Giles:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of all records pertaining to environmental conditions at the above-captioned parcel of real property (Property). The documents are solicited from the following Departments:

- **The New Rochelle Fire Department**
  The records sought should include, but not be limited to, the installation and the closure of Petroleum Bulk Storage (PBS) tanks, tank tightness testing, and violations, enforcement actions, and emergency responses in connection with petroleum products or hazardous substances.

- **The Bureau of Buildings**
  The records sought should include, but not be limited to, new building permit applications, demolition permits, the drawings (plans) in connection with these permits and certificates of occupancy.

- **Department of Public Works**
  The records sought should include, but not be limited to:
  - The date of connection to the municipal sewer;
  - The existence and purpose of an historic sewer pump station at the Property;
  - Historic Property surveys (plans); and
  - Documents regarding environmental investigation and remediation activities, spills, or any other issues regarding environmental quality of soil, groundwater, soil vapor and air at the Property.
The Department of Finance’s Bureau of Assessments and Tax Department
The records sought should include, but not be limited to, property tax cards or similar instruments used to document current and historic Property assessments.

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed $50. I can also make arrangements to review the files in person.

If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or lderrendinger@rouxinc.com.

Sincerely,

ROUX ASSOCIATES, INC.

Luc Derrendinger, Ph.D.
Senior Geologist/
Project Manager
Mr. Derrendinger, I have been informed by our Department of Public Works that the information requested is too voluminous and varied to satisfy / fulfill this request. It is suggested that you should make an appointment to visit the Public Works Dept. to view the information on hand, if available.

Please contact:

John B. Clemente, P.E.
Deputy Commissioner of Public Works & City Engineer
515 North Avenue
New Rochelle, NY 10801
Phone: 914-654-2134
Fax: 914-654-2195

Additionally, our Bureau of Buildings report that they have no permits on file relative to environmental conditions as per your foil request.

Please feel free to contact Mr. Clemente to arrange a time convenient to review the folders/files/maps you have requested. Please cc me on any correspondence.

Thank you

Bennie F. Giles, III
New Rochelle City Clerk

APPLICATION FOR ERECTION OF BUILDINGS

Application is hereby made to the Bureau of Buildings of the City of New Rochelle, N. Y., for the issuance of a Building Permit as per detailed statement and plans herewith submitted, for the erection of the building herein described. The undersigned hereby agrees to comply with all the requirements of the Building Code, Zoning Ordinance and all other laws pertaining to same, in the erection of said building, whether or not shown on plans or specified in the application.

(Sign here)  
(Builder, Architect, Owner)

In making this application for the approval of plans, the following must be furnished: Duplicate copies of the plans and elevations, showing all floors, including cellar or basement, height of stories, etc.; all drawn to a uniform scale not less than one-eighth inch to the foot; also a plot plan in duplicate, to scale, showing accurately, the size and location of all existing and proposed buildings or structures; property lines must be clearly and distinctly indicated on the plot plan.

1. Location 2248 Main St. Block 84 Lot 5

2. State how many buildings to be erected? 1 Classification of Construction:
   Fireproof
   Fire Resistive
   Ordinary
   Frame
   How to be occupied? Garage

3. If apartment house, how many families will occupy the?

4. Height of ceilings?

5. Means of egress for each apartment?

6. Zone District

7. Size of lot: feet front; feet rear; feet deep

8. Size of buildings: feet front; feet rear; feet deep

9. Height of Building: Stories; vertical distance from curb level and/or finished grade abutting the building to highest point of roof beams or mean level of gable?

10. Is there any other building on lot? Yes

11. What will be depth of foundation walls below curb level and/or finished grade abutting the building? feet; below natural grade? Yes

12. Will footing rest on rock; earth or piles? Rock/earth

13. Will building have a basement? No; cellar? No; sub-cellar? No

14. Footing material?: conc thickness: inches; width: inches.

15. Material for foundation walls?: conc thickness: inches; for exterior walls?: inches.

17. Will walls, partitions, floor beams, etc., be supported by steel girders? Yes by columns?
18. Designate the live load in pounds per sq. ft. for 1st story_________lbs.; 2nd story_________lbs.; 3rd story_________lbs.; 4th story_________lbs.; 5th story_________lbs.; 6th story_________lbs.; 7th story_________lbs.; roof_________lbs.; (live load must also be designated on the plans.)

19. Give thickness of firewalls_________inches; what is the floor area between firewalls_________sq. ft.

20. Will chimneys be built of brick, concrete, or stone? BRICK; give size of heater flue_________inches; incinerator flue_________inches; fireplace flue_________inches; will flue be of fire-brick or terra cotta_________? what is the height of chimneys above the roof or ridge?_________feet_________inches

21. Give size and kind of material of floor beams. (If floors are to be of fireproof, give) thickness; kind of construction.

Trimmers and headers, size_________inches; how framed?

22. How will building be framed? STEEL; posts (size)_________; stils (size)_________; girts (size)_________; plates (size)_________; braces (size)_________; studding (bearing partitions supporting two stories) (size)_________; less than two stories (size)_________; distance on center_________inches.

23. How will building be sheathed? METAL

24. Will roof be flat, peaked or mansard? PEACHED

25. State kind of roofing material? BUILT-UP

26. Will building be provided with elevators? NO; dumb-waiters?_________; of what material will walls of shafts be constructed?_________; thickness of shaft walls_________inches.

27. System of heating_________; oil, gas or coal_________; if steam, what pressure_________lbs.

28. Will buildings be provided with fire escapes? NO; fire towers?

29. Will building be provided with incinerators? NO

30. Will building be provided with standpipes?_________; sprinkler system?

31. Will building be provided with mechanical ventilation? YES; forced draft system? YES; refrigerating system?_________; air conditioning system?

32. What is the area of the plot in square feet?_________; what percentum of lot is occupied by building?

33. What are the cubical contents of each building? 650,000 cu. ft.

34. What is the estimated cost of each building? (including plumbing, heating, ventilating, electrical, etc.), exclusive of lot? $527,000

35. Will building be supervised by Architect, Builder, Engineer, or Owner? OWNER

City Yard Garage Takes Shape

Work is progressing on the new Municipal Repair Garage at City Yard. The prefabricated "Butler" type building, consisting of insulated and enameled steel panels with a steel frame, should be ready for occupancy by the Department of Public Works in the latter part of May. The garage, for which City Council appropriated $325,000 last May, will replace the present repair garage structure which dates back to the early part of this century. Features of the new structure will include two heavy-duty truck lifts, one light truck lift and two auto lifts (the only lift in the old garage—a small piece of machinery dating to the thirties or before—has been condemned and is unusable). A truck washing and painting area, a blacksmith and welding shop, a tire repair area, as well as a machine shop and a stockroom will also be included in the new garage. City garage employees, now squeezed into the old structure, are awaiting the completion of these expanded facilities. The building was designed by Anthony Pucillo, a local architect, and Fabito Builders Inc., a local firm, are the general contractors. All construction is being supervised by personnel of the Department of Public Works.

Sent: Monday, July 09, 2012 2:31 PM
To: Giles, Bennie
Subject: FW: FOIL Request
Attachments: Roux-Documents on City Yard.pdf

Bennie,
This was a very hard FOIL request to get accurate. I did my best and had to involve a few people from other departments for most of the information. Unfortunately, not all dealings with the tanks at the requested location went through the fire department.

According to our records and discussions with other city departments involved:

220 Main St: No tanks as per our records for this address.

224 Main St: All underground storage tanks have been removed from the property.
Above ground tanks are as follows:

Streets & Highways building- (2) 275 gal above ground storage tanks
Sanitation- 1000 gal above ground storage tank
Garages (in wooden bldg.)- (2) 275 gal above ground storage tanks

275 gal above ground storage tank for kerosene

Truck garage- 3000 gal above ground storage tank

4000 gal above ground storage tank [gasoline]
6000 gal above ground storage tank [diesel]

(3) 475 gal above ground tanks [holding hydraulic, transmission and motor oil]

275 gal tank above ground (antifreeze)
650gal waste oil tank above ground

Thanks,
Ted

Re: Freedom of Information Request
New Rochelle Department of Public Works Facility (City Yard)
224 East Main Street or U.S. Route 1
(a.k.a. 220 and 229 East Main Street or U.S. Route 1)
New Rochelle, New York 10801
Owner: City of New Rochelle
Legal Code: Section 1 - Block 84 – Lot 5

Dear Madam or Sir:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of documents regarding environmental investigation and remediation activities, spills, storage tank registrations and closure reports, hazardous materials activity, State Pollution Discharge Elimination System (SPDES) permits and monitoring reports, or any other issues regarding environmental quality at the above-captioned property (Property).

These documents should not be limited to NYSDEC Spill Report Forms, and include copies of environmental reports under both active and closed spill and remediation projects. The following spills have been reported at the Property: 9102890, 9206991, 9712899, 9713423, 9713578, 9800763, 9803810, 0101307, 0408614 and 1011242. The Petroleum Bulk Storage ID for the Property is 3-600405.

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed $50. If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or lerrendinger@rouxinc.com.

NEW ROCHELLE DPW FACILITY CITY YARD MAIN ST - SPILLS 9102890, 9206991, 9712899, 9713423, 9713578, 9800763, 9803810, 0101307, 0408614, 1011242  
RECEIVED DATE: JUNE 25, 2012

Dear LUC DERRENINGER:

This letter acknowledges receipt of your request for access to records under New York State's Freedom of Information Law (FOIL). Your request has been forwarded to T. Ghiosay (914-428-2505 ext 361) of the Spill Prevention and Response Program and K. Grzyb of the Air Resources Program. Within twenty (20) business days, you can expect a response from the regional program as to whether such documents are in their custody. Please find spill information sheets enclosed. You may wish to contact the Westchester County Health Department at 145 Huguenot Street, 8th floor New Rochelle, New York 10801 or call (914) 813-5000 for any records in their custody.

If programs have records, you will have an opportunity to arrange to obtain access to the records. There is no charge to review records or for copies of seven or fewer pages. By law, copy charges will not exceed 25 cents per page or the actual cost of copying. Photographs, maps, oversized documents, videotapes or audio tapes generally cost more than 25 cents per page to copy. You may be required to pay a deposit prior to copies being made and/or to pay all copy charges prior to copies being sent.

If all records are not provided because the records are excepted from disclosure, you will be notified of the reasons and of your right to appeal the determination.

If you have questions about the status of your request, you may write to this office at the above address or call (845) 256-3000 and follow instructions to reach the program contact person(s) noted in the first paragraph.

RE: R3 FOIL, #R3-12-0524
   Albany #12-1839
   New Rochelle DPW Facility City Yard Main ST

Received Date: June 25, 2012

Dear Luc Derrendinger:

We have reviewed your request for the above referenced records under New York State’s Freedom of Information Law (FOIL).

Records are available for review and/or copying. Please contact the FOIL Secretary, Ms. Brenda Griffin, at (845) 256-3052 to schedule an appointment to review the records. There is no charge to review records or for copies of seven (7) or fewer pages. By law, copy charges will not exceed 25 cents per page or the actual cost of copying. Photographs, maps, oversized documents, videotapes or audio tapes generally cost more than 25 cents per page to copy. You may be required to pay a deposit prior to copies being made and/or to pay all copy charges prior to copies being sent.

Do not hesitate to contact me if I can be of further assistance.

Sincerely,

Kenneth R. Grzyb, P.E.

SUBJECT: DEC #3-8510-100/2-0
COMMENTS: ________________________________

AIR RESOURCES PROJECT INFORMATION CHECKLIST

Please review and complete for each individual emission source or multiple sources at the same facility requiring the same type of permit or modification. Check ALL appropriate boxes and return to DRA analyst with the application(s).

Facility Information:

☑ Existing facility

☐ Existing facility being modified or expanded

☐ New facility to be constructed

☐ New facility under construction

Emission Source:

☐ New source not yet constructed (new P.C.)

☐ New source constructed under P.C. and inspected (initial C.O.)

☑ Existing source currently operating and not previously permitted (Please circle initial C.O. and/or initial P.C.)

☐ Existing source mod (Please circle initial C.O. and/or initial P.C.)

☐ This is a PSD source

☐ This is a major source under Division of Air guidelines

☐ This application is incomplete (please attach reasons)

Compliance Status:

YES NO Can this permit to construct for a modification of an existing source be issued as a C.O. without further inspection? (attach comments if appropriate)

Approvable:

☑ Source(s) meets air emission standards and requirements - Issue permit(s)

Non-approvable:

☐ Source(s) does/do not meet air emission standards or requirements - Deny permit(s)

Islandia, NY 11749

RE: Freedom of Information Act Request Number 02-FOI-01099-12
New Rochelle Dept. of Public Works/City Armory/Nelstad Materials/Mancuso Marina

Dear Mr. Derrendinger:

The subject location is not listed on the CERCLIS or NFRAP lists at the present time.

CERCLIS is the national database EPA uses as the official inventory of hazardous waste sites considered for cleanup under the CERCLA (Comprehensive Environmental Response, Compensation and Liability Act), also known as Superfund.

As of February 15, 1995, CERCLIS no longer includes sites which EPA has assessed and designated “No Further Remedial Action Planned” (NFRAP). A NFRAP designation means, to the best of EPA’s knowledge, Superfund has completed its assessment at a site and determined no further steps would be taken to list these sites on the National Priorities List (NPL) unless information is received at a later time indicating this decision was not appropriate. A NFRAP decision does not necessarily mean that there is no hazard associated with a given site; it means only that based upon available information, the location is not judged to be a potential NPL site.

Also, the absence of a facility from the CERCLIS list should not be construed as a determination by the EPA that the facility has not been affected by the presence of any hazardous waste. The absence of a facility from this list means that EPA has not received information indicating that there has been a release or threat of hazardous substances at or from the facility. Therefore, EPA has not performed an assessment at this location to date. As with any parcel of real property, EPA may be called upon to assess the property for a release of hazardous substances should conditions warrant.

In the interest of saving time and paper, I suggest that in the future you identify the specific properties you have an interest in by accessing the following web sites. The information available through these web sites should address any future inquires you may have. This is the address for the Superfund Information Systems homepage [http://www.epa.gov/superfund/sites](http://www.epa.gov/superfund/sites). From this site you may obtain a list of all sites which are currently on the CERCLIS database and sites archived from CERCLIS. Additionally you can access the RODS database from here as well as download reports or order a variety of site information products on line. This is the site for the National Response Center maintained by the U.S. Coast Guard - [www.nrc.uscg.mil/foia](http://www.nrc.uscg.mil/foia).
We do not consider this a denial, but if you do, you have the right to appeal to the Office of Environmental Information, Records, FOIA, and Privacy Branch (2822T), 1200 Pennsylvania Avenue, NW, Washington DC 20460. The appeal must be received at this address no later than 30 calendar days from the date of this letter. The Agency will not consider appeals received after the 30-day limit. The appeal may include as much or as little related information as you wish, as long as it clearly identifies the determination being appealed (including the assigned FOIA number). For quickest possible handling, the appeal letter and its envelope should be marked “Freedom of Information Act Appeal.”

This determination applies to Superfund program records; your request has also been assigned to other programs within the Agency for separate replies. Please contact Wanda Calderon, at (212) 637-3668, on any questions concerning your pending request.

Sincerely,

Leslie H. Peterson, Chief
Resource Management/Cost Recovery Section
Emergency and Remedial Response Division
June 22, 2012

Ms. Wanda Calderon  
Freedom of Information Officer  
United States Environmental Protection Agency  
Region 2

(a.k.a. 220 and 229 East Main Street or U.S. Route 1)  
New Rochelle, New York 10801  
Owner: City of New Rochelle  
Legal Code: Section 1 - Block 84 – Lot 5

Dear Ms. Calderon:

Pursuant to the Freedom of Information Act, 5 U.S.C. 552, Roux Associates, Inc. (Roux Associates) hereby respectfully requests copies of all records pertaining to environmental conditions at the above-captioned parcel of real property (Property).

More specifically, I am interested in obtaining records from specific programs and records of actions including the hazardous waste program, oil spill and hazardous substance release program, compliance inspections, violation issuances and enforcement actions at the Property, as well as documents in connection with the following project:

If all the requested records cannot be emailed to me, please inform me of the portions that can be emailed and advise me of the cost for reproducing the remainder of the records, which are tentatively not to exceed $50. If this request is too broad or does not adequately describe the records, please contact me so that I may clarify my request and, when appropriate, inform me of the manner in which records are filed, retrieved, or generated.

If for any reason any portion of this request is denied, please inform me of the reasons for the denial in writing within 20 days and provide the contact information of the person or body to whom an appeal should be directed.

Roux Associates, Inc.
Thank you for your prompt attention to this matter. If you have any questions, you may reach me at 631-232-2600 or lderrendinger@rouxinc.com.

Sincerely,

ROUX ASSOCIATES, INC.

WCDOH RECORD REQUEST ACKNOWLEDGEMENT 12-312

This is to acknowledge receipt of your Freedom of Information request concerning:

- New Rochelle Dept. of Public Works, 224 East main St., New Rochelle, NY

Your request has been assigned this number: 12-312

Please use this reference number when corresponding with this office regarding the above request.

We will contact you when the record search has been completed. There is no charge for documents that are sent electronically by email. Please note that a 25 cent per page copying charge will apply for documents mailed to you.

If you need to communicate with us, please reference the request number indicated above when you email me at: FOIL-DOH@westchestergov.com

Caren Halbfinger
Director
Public Health Information & Communications

Westchester County Department of Health

Record Requests
FOLLOW UP INSPECTION OF THE ABOVE LOCATION WAS PERFORMED BY THIS WRITER.

ON SITE I MET JOHN CLEMENTE, JOE ESPORTO, JOHN MONFRIETTI AND OTHERS. A LEAKING 5000 GALLON HEATING OIL TANK WAS REMOVED PREVIOUSLY. THE EXCAVATION WAS STILL OPEN AND FILLED WITH WATER. FREE PRODUCT WAS PRESENT IN THE EXCAVATION AND BEING VACUUMED OUT WHILE I WAS ON SITE. EXISTING MONITORING WELLS SURROUNDING THE EXCAVATION WERE CONTAMINATED AND BEING VACUUMED OUT ALSO.

THE SITE REMEDIATION WAS DISCUSSED. THE CONTRACTOR PLANS TO DIG FURTHER TOWARDS THE DRAINAGE LINE, ONLY A FEW FEET. THE EXCAVATION WILL BE PUMPED OUT AGAIN WHEN PRODUCT ACCUMULATES. THE EXCAVATION IS AFFECTED BY THE TIDES. (I SAW ABOUT 400 FEET AWAY)

FURTHER ACTION REQUIRED
The spill must be remediated. Excavation of all contamination is recommended. If excavation is not feasible, recovery monitoring wells and a remediation plan must be utilized. The existing wells may be incorporated into the plan. It is recommended that recovery wells be installed when the hole is backfilled.

FURTHER ACTION REQUIRED
The exact method of remediation must be proposed and conducted by the City of NR and their contractors. If complete excavation of the contamination is not performed, submit a proposed remediation plan for review and approval. It is understood that the being and utilities and infrastructure may limit the area accessible to excavation.
## TANK CLOSURE INSPECTION REPORT

### TANK INFORMATION

<table>

</tbody>
</table>

### EXCAVATION INFORMATION

- **Are petroleum odors present?**
  - Y  N
- **Is contaminated soil stockpiled on site?**
  - Y  N  N/A
- **Is groundwater present?**
  - Y  N
- **Is stockpile properly staged?**
  - Y  N  N/A
- **Is a sheen visible?**
  - Y  N
- **Was piping removed?**
  - Y  N  Closed in place
- **Is free product present?**
  - Y  N
- **Was fill port removed?**
  - Y  N  Capped
- **Is soil staining visible?**
  - Y  N
- **Was vent removed?**
  - Y  N
- **Was contaminated soil excavated?**
  - Y  N

**Remarks:** Free Product in Excavation. Tank took on water. Tank bedded in sand. Electrical lines over tank. Tank still in the excavation.

### FURTHER ACTION REQUIRED

- **Tank Closure Report:** Submit to WCDOH. The report must include a description of the work performed, site plan, laboratory results, waste disposal manifests, PBS certificate tank number. Failure to comply is a violation of Section 873.2519 of the Westchester County Sanitary Code.

Contaminated Material: All contaminated material must be removed and properly disposed. Contaminated soil must be removed within 60 days after stockpiling began. Failure to comply is a violation of NYSDEC 6NYCRR Part 360-1.7(b)(4).

- **Soil Sampling:** Sampling must comply with NYSDEC STARS Memo #1. Fuel oil tanks: (EPA 8021 and 8270, base/neutrals) or equivalent. Gasoline tanks: EPA 8021 or equivalent. Required sampling:
  
  **Minimum:** 8 Samples (2 bottom, 2 each side—lens—lens, 1 from each tank end).

- **Groundwater Sampling:** Fuel oil tanks: EPA 624 and EPA 625. Gasoline tanks: EPA 624. Required sampling:
  
  2 wells required - Consider backing with wells in excavation.

Other:

- **Excavate contaminated soil then sample, vac truck returning to site. Pump out excavation.**

## FURTHER ACTION REQUIRED

Tank Closure Report: Submit to WCDOH. The report must include a description of the work performed, site plan, laboratory results, waste disposal manifests, PBS certificate tank number. Failure to comply is a violation of Section 873.2519 of the Westchester County Sanitary Code.

Contaminated Material: All contaminated material must be removed and properly disposed. Contaminated soil must be removed within 60 days after stockpiling began. Failure to comply is a violation of NYSDEC 6NYCRR Part 360-1.7(b)(4).

Soil Sampling: Sampling must comply with NYSDEC STARS Memo #1. Fuel oil tanks: (EPA 8021 and 8270 (base/neutral) or equivalent. Gasoline tanks: EPA 8021 or equivalent. Required sampling: Minimum 8 samples (2 bottom, 2 each side-long sides) from each tank end.

Other: Excavate contaminated soil then sample. Vac Truck returning to site. Pump out excavation.
From the Commissioner

The Department of Public Works can't do it alone. In order for our programs to be cost-effective and successful, we require the cooperation of every resident to meet us part of the way. Leaf and yard waste collection, recycling, snow removal and sidewalk maintenance are a combined effort between the Department and the residents we serve. We hope you find the information contained on the Department's webpages helpful.

On behalf of the women and men of the New Rochelle Department of Public Works, I thank you.

**REMARKS**

- SH001 and SH002 are manifolded tanks.
- Facility representatives are aware of the above violations and the City of New Rochelle is currently obtaining bids to have the facility brought into compliance.
- Reminder: MG006 is due for periodic tightness testing in February 2009.

**FURTHER ACTION REQUIRED**

- Notify inspector when contract has been awarded and provide estimated date of work completion.
- Upon work completion, submit proof of compliance to the Department. Proof of compliance may consist of photos, receipts for work performed, test reports, required form submittals or copies of maintenance records. Failure to submit compliance documentation will result in enforcement action with possible civil penalties.

2. Ownership information current: Y = ownership not transferred.
   - Y

3. New facility registered: 1 = facility constructed > 6/23/98 is in service but never registered; X = registered (new or existing); expired registration.
   - X

4. Accurate certificate conspicuously displayed: Y = not displayed; 2 = tank info inaccurate; X = expired; unregistered; new owner.
   - X

### NON-STATIONARY TANKS (e.g., tanks on wheels, trolleys, skids, pallets or rollers; 55-gallon drums)

13. Non-stationary tank stored properly: Y = not stored on impervious surface; 2 = not protected from traffic/accidents/vandalism; 3 = not protected from weather; 4 = not roofed or diked; 5 = floor drain in storage area; 6 = tank > 25 gal not labeled; X = no tanks. Choose all that apply.
   - X

14. Non-stationary tank handled properly: Y = poor housekeeping; 2 = stacked more than 3 high; 3 = no daily inspection; 4 = no inventory records; X = no tanks. Choose all that apply.
   - X

### PRODUCT RELEASE

15. Notification of product release: Y = reported to WCDH or NYSDEC; 1 = no notification; X = no release; notification not required (spill into secondary containment cleaned up within 2 hours).
   - X

16. Remediation of product release: Y = cleaned up; in progress; 1 = no remediation; unsatisfactory progress; 2 = report not submitted; X = no release.
   - X

### MONITORING WELLS

30. Monitoring wells maintained: Y = labeled, sealed, protected; 1 = located in traffic area and not protected from damage; 2 = not sealed; 3 = not labeled; X = no wells. Choose all that apply.
   - X

### DISPENSERS

<table>
<thead>
<tr>
<th>17 2515.4.a</th>

LABELING

68 2515.3 Fill port color coded: Y: 1=none; 2=incorrect or inadequate code; X=product other than listed in 2515.3.

69 2515.4.c.2 AST labeled: Y=tank and remote product level gauge (if any) labeled; 1=tank not labeled; 2=incorrect or inadequate label; 3=remote product level gauge not labeled. Choose all that apply.

SPILL/OVERFILL PREVENTION

70 2515.2 Fill port equipped with spill catch basin: Y: 1=none; 2=product present (may include water/debris); 3=water or debris only present; 4=not liquid tight (holes or cracks); X=fuel oil tank installed < 6/23/98 and not substantially modified > 6/23/98.

28 2515.4.d Pump-filled tank equipped with check valve: Y: 1=not equipped; 2=insoperative; 3=incorrectly installed; X=not remote fill.

29 2515.4.e Gravity-drained tank equipped with operating valve (every line with a gravity head): Y: 1=not equipped; 2=insoperative; 3=incorrectly installed; X=no gravity head on line.

71 2515.4.c AST equipped with overfill prevention: Y: 1=none.

72 2515.6 Overfill equipment maintained: Y: 1=insoperative or tampered automatic shutoff; 2=insoperative high-level alarm; 3=alarm not audible/visible to deliverer; 4=broken product level gauge X=no equipment.

SECONDARY CONTAINMENT

73 2515.5.a Tank ≥10K equipped with secondary containment: Y=accepted model, diked; 1=not equipped; X=tank <10K.

74 2515.5.a Tank >1100 but ≤10K equipped with secondary containment: Y=accepted model, diked, meets SPOTS 17 (< 6/23/98), double-walled tank + SPOTS 17 (> 6/23/98); 1=not properly equipped; X=≤10K, ≤1100.

75 2515.5.a Tank ≤1100 equipped with secondary containment: Y=accepted model, diked, meets SPOTS 17; 1=not properly equipped; X=tank >1100.

76 2515.5.a Diking properly designed and maintained: Y: 1=insufficient design capacity; 2=unprotected floor drain or sump present; 3=water or debris in containment; 4=product in containment; 5=impoundment floor sloped <1% away from tank; 6=not impermeable construction; 7=has holes or cracks; 8=tank ≥10K has rain shields; X=not diked. Choose all that apply.

77 2515.5.c Secondary containment equipped with storm water control: Y=outdoor diked tank equipped with storm water control (valve, manual siphon, roofed); 1=none; 2=dike valve not locked closed; 3=dike valve in poor condition; X=not diked; indoor tank.

78 2528 Tank resting on grade equipped with impermeable barrier: Y: 1=no barrier; 2=barrier in poor condition; X=not on grade; installed <12/27/86.

CORROSION PROTECTION

79 2527.1 AST constructed of welded steel: Y: 1=not welded steel; X=installed < 12/27/86; accepted plastic.

80 2527.3 AST painted or has a non-corrodible surface: Y: 1=none; X=installed < 12/27/86.

81 2527.2.a Steel tank bottom resting on or below grade equipped with cathodic protection: Y: 1=not cathodic protection system; 2=installed < 12/27/86; not on grade.

82 2527.2.d Cathodic protection system monitored (for steel tank bottom resting on or below grade): Y: 1=monitoring (no annual testing; no monthly rectifier readings); 2=test report indicates minimum protection not provided; X=monitoring.

PRESSURE CALCULATIONS & WATER SENSOR CALIBRATIONS
DATA SHEET

PRESSURE SENSOR CALCULATION

\[
\frac{18}{\text{INCHES OF PRODUCT}} \times \frac{0.031}{\text{WEIGHT OF PRODUCT}} = \frac{0.55}{\text{PSI (1)}}
\]

\[
\frac{0}{\text{INCHES OF WATER IN TANK}} \times \frac{0.036}{\text{}} = \frac{0}{\text{PSI (2)}}
\]

Line 1 + Line 2 = Total Positive Head Pressure in tank

\[
\frac{10}{\text{INCHES OF WATER OUTSIDE TANK}} \times \frac{0.036}{\text{}} = \frac{0.55 + 0.36}{\text{PSI (3)}} + \frac{0.19}{\text{PSI (4)}}
\]

Total Head Pressure Minus Outside Water Pressure

Always add .5 PSI

NOTE: If line 6 is Less Than .5 PSI Line 7 Shall be .5 PSI

Re: Petroleum Bulk Storage Facility 3-600405
224 East Main Street, New Rochelle

Dear PBS Facility:

Petroleum storage tanks at the referenced facility are due for tightness testing in February 2007 as indicated on the enclosed facility information report. Tanks must be tested by a company registered with the Department. Please submit a Tank Testing Notification form when you have scheduled the tests.

Submit passing test reports to the Department no later than 30 days after the test. The Department will update your facility information and send a new registration certificate to your mailing address. If any tank fails the tightness test, notify the Department immediately at 914-813-5000 and the New York State Department of Environmental Conservation at 800-457-7362.

The facility owner/operator, not the tank tester, is responsible for ensuring that test reports are submitted to the Department. Failure to submit reports in a timely manner will result in the issuance of a Notice of Hearing. Civil penalties up to a maximum of $1000 per day per violation may be assessed.

If you have any questions, please call me at (914) 813-5971 or send email to dsj1@westchestergov.com.

Sincerely,

Danielle Jackson
Sanitarian

New Rochelle, NY 10801

Re: New Rochelle Department of Public Works Yard
224 East Main Street
PBS No. 3-600405
NYSDEC Spill No. 04-08614

Mr. Beck:

In response to your letter of February 14, 2005, the Department offers the following information relative to the removal of abandoned underground waste oil tanks at the Public Works Yard at 224 East Main Street.

- Tanks were removed under the permit contained in Attachment A
- Updated PBS application is contained in Attachment B
- The active NYSDEC spill number for the City Yard is 04-08614. It should be noted that the Department of Public Works is currently undertaking cleanup and remediation efforts to close out this spill number.
- The work involved the removal and disposal of 4 1000-gallon steel waste oil tanks from in front of the northernmost service bay of the Central Garage located in the Department of Public Works Yard (224 East Main Street). The work was conducted by Jade Environmental, Inc. under contract with the Department of Public Works. Soil was removed and disposed at a licensed facility and clean fill was used to backfill the excavation. Six inches of asphalt binder course was placed by Department of Public Works staff. Work Summary is included in Attachment C
- A site plan is contained in Attachment D
- Soil Sampling results are contained in Attachment E
- Manifests are contained in Attachment F

The Department considers these tanks removed. If you should have any questions regarding this material, I can be reached at 914-654-2136.

Respectfully,

Jeffrey C. Coleman
Deputy Commissioner

Cc: File 52.10
ATTACHMENT A
This work permit is good for sixty (60) days from the date of issue and must be posted on the tank at all times. Removal of this work permit prior to completion of work constitutes a violation of Article XXV of the Westchester County Sanitary Code.

In accordance with Article XXV of the Westchester County Sanitary Code, the bearer of this permit has completed an application for a work permit to perform work on the petroleum bulk storage tank located at:

Name of Establishment: New Rochelle Municipal Yard
Street Address: 224 East Main Street
Municipality: New Rochelle
Applicant's Name: Jade Environmental
Issue Date: 11/04/2004 Expiration Date: 01/03/2005

Federal Tax ID Number: [Redacted]
PBS Number: 3-600405

Work to be Performed: Remove/Close Tank (4)

Joshua Lipsman, M.D., M.P.H.
Commissioner of Health
**Westchester County Department of Health**
**Office of Environmental Health Risk Control**

**Petroleum Bulk Storage**

Instructions:
- Identify existing tanks by PBS tank ID number as it appears on the PBS certificate.
- Do not begin work unless you have received a valid work permit.
- Submit a written report detailing activities within 30 days after work is completed. Submit as-built plans for all new installations.

Where should we send the permit?
- Mail to: Jade Environmental, Inc.

Address:
- Same

City: State: Zip:

Or fax to:

Attention: Mr. Dave Pelletier

Report Date: 11/22/2004
Re: Client Project ID: New Rochelle DPW
York Project No.: 04110397
Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 11/15/04. The project was identified as your project "New Rochelle DPW ".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

**Units Key:**
For Waters/Liquids: mg/L = ppm; ug/L = ppb
For Soils/Solids: mg/kg = ppm; ug/kg = ppb

**Notes for York Project No. 04110397**

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York’s liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.

Re: New Rochelle Municipal Yard  
224 East Main Street  
New Rochelle, NY 10801  
PBS No. 3-600405  
NYSDEC Spill No. 04-08614

Dear Mr. Maxwell:

The Westchester County Department of Health issued a work permit for the removal of four (4) underground storage tanks to Jade Environmental, Inc. in November 2004. Article XXV of the Westchester County Sanitary Code, "Petroleum Bulk Storage", Section 873-2519.4 requires that you provide a written report detailing the work performed. The enclosed information sheet lists the information to include in the report based on the type of work performed.

Failure to submit the requested information by March 31, 2005 will result in the issuance of a Notice of Hearing requiring your appearance before an Administrative Law Judge. You could be liable for a civil penalty up to $1,000.00.

If you have any questions, please call me at (914) 813-5162.

Sincerely,

Frederick Beck, Jr.  
Sanitarian  
Office of Environmental Health Risk Control

EXCAVATION INFORMATION

Excavation dimensions: L x W x D
Is soil staining visible?: Y N
Are petroleum odors present?: Y N
Is groundwater present?: Y N
Is a sheen visible?: Y N
Is free product present?: Y N
Was contaminated soil excavated?: Y N
Is contaminated soil stockpiled on site?: Y N
Is stockpile properly staged?: Y N
Receptors nearby: LIS
Distance from excavation: Private Well, Stream, River, Storm Drain, Lake, Pond

Remarks:
Tank gravel held any tanks. Tank gravel had a concrete bottom. Site is known to historically contaminated. Tank gravel area completely excavated to opening concrete edges.

FURTHER ACTION REQUIRED

Tank Closure Report: Submit to WCDOH. The report must include a description of the work performed, site plan, laboratory results, waste disposal manifests, tanks identified by PBS certificate tank number. Failure to comply is a violation of Section 873.2519 of the Westchester County Sanitary Code.

Contaminated Material: All contaminated material must be removed and properly disposed. Contaminated soil must be removed within 60 days after stockpiling began. Failure to comply is a violation of NYSDEC 6NYCRR Part 360-1.7(b)(4).

Required sampling:
4 X 15 = Total of 4 Samples = 60 L / Total Sampling Volume

Required sampling:
None at this time

I acknowledge receipt of this inspection report.

Re: New Rochelle DPW
224 Main Street
New Rochelle, NY
PBS No. 3-600405
NYSDEC Spill No. 01-01431

Dear Mr. Orszulik:

I have reviewed the closure report submitted by Ira D. Conklin & Sons, Inc. dated December 19, 2001 regarding the removal of one (1) 5,000-gallon underground diesel storage tank. The soil sample results were satisfactory and the Westchester County Department of Health requires no further action regarding the work performed. However, please submit an updated PBS application, if any tanks were installed to replace the one removed.

If you have any questions, please call me at (914) 813-5162.

Sincerely,

[Signature]

APPENDIX A - Laboratory Results

APPENDIX B - Disposal Certificates
1.0 INTRODUCTION

Ira D. Conklin & Sons, Inc. of Newburgh, New York (IDC), was contracted by the New Rochelle Department of Public Works (NRDPW) to conduct an underground storage tank (UST) closure report at their facility located on Main Street in New Rochelle, New York (Figure 1). The site is utilized as a DPW garage.

The objectives of this UST closure are to identify and characterize any contamination that may exist in soil and/or groundwater in the vicinity of the former underground storage tank (UST). This assessment summarizes all site characterization activities that were conducted at the above referenced location. This report does not address any additional environmental concerns that may be associated with the site. The activities conducted at the site were performed in accordance with all local, state and federal regulations.
2.0 SCOPE OF WORK

In order to meet the objectives previously laid out, IDC has conducted a site assessment in the vicinity of the UST and associated piping, obtained soil samples from within the excavation of the tank and reviewed soil and/or groundwater laboratory analysis. Based on these findings a UST closure report characterizing the site has been generated. The scope of work necessary for IDC to adequately meet these objectives included the following:

- Excavation and disposal of one (1) 5,000 gallon diesel UST.
- Scanning of the soils with a Photoionization detector (PID) to determine volatile organic vapor levels.
- Collection of post-excavation soil samples from the UST excavation for laboratory analysis utilizing EPA Method 8260 - Stars (volatile organic compounds - VOC) and EPA Method 8270 - Stars (semi-volatile organic compounds – SVOC).
- Compilation/analysis of the site data and the preparation of a UST Closure Report.

The subsequent sections detail the UST removal and investigative findings.
3.0 BACKGROUND SITE INFORMATION

3.1 Site Identification

PBS # 3-600405
Spill # 01-01431

3.2 Site Location

The site is located in New Rochelle, New York. The site is situated on Main Street (Figure 1).

The site structures present include several buildings that are utilized as garages (Figure 2).

The area of concern for this assessment is limited to the area immediately surrounding the
storage tank (Figure 2). In the past, the tank had been used to store diesel. The site is currently
occupied. Previous uses of the site were unavailable.

3.3 Area Land Use

Land use in the vicinity of the site consists of predominantly commercial development.

3.4 Receptor Survey

The site is serviced by municipal water. No other observable receptors were noted in the
immediate vicinity.
4.0 SITE ACTIVITIES

Site activities completed include the excavation and removal of the aforementioned UST, the screening of soils with a PID meter, sampling of the soil and analysis of the soil by a New York State Department of Health (NYSDOH) certified laboratory. The procedure and findings of these activities are outlined below.

4.1 UST Removal Operations

In March 2001, IDC was contracted by the NRDPW to conduct a UST closure report on the removal of the above-mentioned UST and to generate a report based on the findings. Spill number was assigned to the site when contamination was encountered. The following details these procedures.

4.1.1 Excavation 1

IDC personnel conducted the removal of the 5,000-gallon diesel UST on October 11, 2001. The UST was pumped out to remove any remaining product before excavation commenced. The soils above and surrounding the UST was excavated until the top of the tank was encountered at approximately (3) three feet below ground surface. Excavation activities continued until there was enough space around the tank to facilitate removal without damage.
Once the tank was lifted from the subsurface, it was placed in a secure area for final inspection and cleaning. The tank was then rendered useless by cutting a window on the end of the tank. The distribution and vent lines were also cleaned and transported in the same manner.

Figure 1. View of tank excavation.

The soils within the excavation were scanned with a PID meter for total organic vapor concentration during tank removal operations. Any soils displaying positive readings were excavated and stockpiled on polysheeting. The following readings were observed during the final soil screening analysis:
Groundwater and bedrock were not encountered during the excavation procedures.

Further excavation could not be conducted along the east wall due to the presence of the garage building. Excavation to the east was terminated due to the presence of an existing oil water separator. No field screening of the bottom of the excavation was conducted due to the presence of a concrete pad. The soils within the excavation were comprised of backfill materials and sandy soils.

After final cleaning, the tank was visually inspected. The UST was constructed of single wall bare steel. The condition of the tank was as follows:

<table>
<thead>
<tr>
<th>Tank Condition</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>5,000 gallon diesel UST</td>
<td>Poor condition – pitting and corrosion.</td>
</tr>
</tbody>
</table>

Figure 2. Condition of tank upon removal.
4.2 Soil Removal and Disposal

During the excavation and removal of the above UST, 68.06 tons of contaminated soil was disposed of at TPS Technologies, Inc. located in Newburgh, New York (Appendix B).

![Image](image-url)  

Figure 3. View of stockpiled contaminated soil.
5.0 SAMPLING AND ANALYTICAL RESULTS

5.1 Sampling Procedures

5.1.1 Soil Sampling

Soil sampling at the site was conducted in accordance with NYSDEC Guidance Document “SPOTS 14”. IDC collected one (1) grab sample from each wall of the excavation. All samples obtained from the excavation walls were collected 1/3 from the bottom of the excavation. Due to the presence of a concrete pad, within the bottom of the excavation, no sample was obtained. IDC technicians utilized latex gloves while collecting the soil sample and immediately placed the sample in a cooler for preservation, at 4 degrees Celsius, and delivery to York Laboratories located in Stamford, Connecticut (NYSDOH certified laboratory). The soil samples were analyzed for Volatile Organic Compounds by EPA Method 8260 - Stars and Semi-Volatile Organic Compounds by EPA Method 8270 - Stars. The samples were identified as follows on the laboratory data sheets:

<table>
<thead>
<tr>
<th>Sample Location</th>
<th>Sample Identification</th>
</tr>
</thead>
<tbody>
<tr>
<td>North Wall</td>
<td>3508A</td>
</tr>
<tr>

<td>3508B</td>
</tr>
<tr>
<td>West Wall</td>
<td>3508C</td>
</tr>
<tr>
<td>East Wall</td>
<td>3508D</td>
</tr>
</tbody>
</table>

5.1.2 Groundwater Sampling

Groundwater was not encountered during the excavation procedures.
5.2 Post-Excavation Sample Analytical Results

5.2.1 Soil Sample

The soil samples obtained from the excavation revealed the presence of several VOC compounds within the north and east walls, however, the concentrations detected were below the allowable NYSDEC Soil Cleanup Objectives. Several SVOC compounds were detected within the walls of the excavation, those compounds detected in the north, west and east walls in excess of NYSDEC Soil Cleanup Objectives. The following summarizes the findings of the soil analytical results from the samples collected from the excavation area. The laboratory data sheets and chain of custody documentation can be found in Appendix A.

5.2.1.1 Excavation 1

Several VOC and SVOC compounds were detected in the exit samples from the excavation. The following table illustrates the analytical results.

### 5.2.2 Groundwater Sample

Groundwater was not encountered during the excavation procedures.
6.0 CONCLUSIONS

6.1 Summary

The following summarizes the findings of the site assessment, UST removal and soil analytical results.

- Excavation and disposal of one (1) 5,000 gallon diesel UST.
- Final soil screening did reveal the presence of elevated readings within the walls of the excavation.
- Laboratory analysis did reveal the presence of several VOC compounds within the north and east walls of the excavation, however, the concentrations detected were below the NYSDEC soil cleanup objectives.
- Laboratory analysis did reveal the presence of several SVOC compounds within the north, west and east walls of the excavation, however, only those with the north, west and east walls were in excess of NYSDEC soil cleanup objectives.
- 68.06 tons of contaminated soil was excavated and disposed of at TPS Technologies, Inc. located in Newburgh, New York.

6.2 Recommendations

Based on observations during the UST removal activities and the resulting soil analytical data, IDC recommends no further action in the immediate vicinity of the UST. However, there are other environmental issues associated with the site that should be addressed prior to site closure.
7.0 REGULATORY NOTIFICATION

As required a copy of this report will be forwarded to the regional office of the Westchester County Health Department (WCHD) and the NYSDEC for their review. The necessity for further remedial action will be at the discretion of the WCHD and NYSDEC.
8.0 DISCLAIMER/LIMITATION OF DAMAGES

This report is based on a limited number of invasive samples and analyses and pertains only to the scope of work area. Any other environmental conditions that may be present at the site are excluded from this report. The conclusions presented in this report are based only on the observations made during this investigation and data provided by others. Conditions may vary significantly with time, particularly with respect to groundwater elevations and quality. Should additional data become available, this data may alter conclusions presented or extrapolated from this report. Therefore, the conclusions and recommendations set forth herein are applicable only to the facts and conditions described at the time of this report.

In performing its services, IDC of Newburgh, New York uses that degree of care and skill exercised under similar conditions. The standard of care shall be judged exclusively as of the time these services are rendered and not according to later standards. IDCs findings and conclusions must be considered not as scientific certainties, but rather as opinions concerning the significance of the data available. Specifically, IDC does not and cannot represent that the site contains no hazardous materials, oil, or other latent condition beyond that observed. IDC makes no express or implied warranty beyond its conformance to these standards.

IDC shall not be responsible for conditions or consequences arising from relevant facts that were concealed, withheld or not fully disclosed. IDC believes that all information contained in this report is factual, but no guarantee is made or implied. IDC shall not be responsible for any loss,
damage or liability arising from any negligence of others in the interpretation or use of any results, report, or communication.

The data, information, opinions, recommendations, and conclusions contained in this site assessment report are intended for the sole and exclusive use of the client. Any use of or reliance upon this report or its content by any other party is prohibited by IDC, unless such use or reliance is expressly authorized in writing by IDC. IDC assumes no responsibility or liability to any party for any damage, cost, expense, or liability incurred by such party as a result of unauthorized use of or reliance upon the report, and in any event such liability of IDC shall be no greater in aggregate than the lesser of the compensation received for this report or the amount covered by IDC insurance policy.
APPENDIX A
LABORATORY ANALYSIS
Technical Report

prepared for

Ira D. Conklin & Sons, Inc.
94 Stewart Ave.
P.O. Box 7457
Newburgh, NY 12550
Attention: Stacey Smit

Report Date: 12/19/2001
Re: Client Project ID: New Rochelle DPW
York Project No.: 01100355 R
Purpose and Results

This report contains the analytical data for the sample(s) identified on the attached chain-of-custody received in our laboratory on 10/15/01. The project was identified as your project "New Rochelle DPW ".

The analyses were conducted utilizing appropriate EPA, Standard Methods, and ASTM methods as detailed in the data summary tables.

All samples were received in proper condition meeting the NELAC acceptance requirements for environmental samples except those indicated under the Notes section of this report.

All the analyses met the method and laboratory standard operating procedure requirements except as indicated under the Notes section of this report, or as indicated by any data flags, the meaning of which is explained in the attachment to this report, if applicable.

The results of the analyses, which are all reported on an as-received basis unless otherwise noted, are summarized in the following table(s).

Units Key:  
For Waters/Liquids: mg/L = ppm; ug/L = ppb  
For Soils/Solids: mg/kg = ppm; ug/kg = ppb

Notes for York Project No. 01100355 R

1. The MDL (Minimum Detectable Limit) reported is adjusted for any dilution necessary due to the levels of target and/or non-target analytes and matrix interference.
2. Samples are retained for a period of thirty days after submittal of report, unless other arrangements are made.
3. York's liability for the above data is limited to the dollar value paid to York for the referenced project.
4. This report shall not be reproduced without the written approval of York Analytical Laboratories, Inc.
5. All samples were received in proper condition for analysis with proper documentation.
6. All analyses conducted met method or Laboratory SOP requirements.
7. It is noted that no analyses reported herein were subcontracted to another laboratory.

**Pcs Processing Facility Certifies the Receipt of the Soil Covered by This Soil Tracking Form Except as Noted Below.**

**Processing Facility Discrepancy Box (Any Discrepancies in Above Information Should Be Noted Here.)**

**Instructions:**
1. Generator completes all items in generator and/or consultant boxes, retains copy #1, and gives remaining copies to transporter.
2. Transporter completes all items in transporter boxes, retains copy #3, and gives remaining copies to the processing facility.
3. Processing facility completes all items in processing facility boxes, retains copy #2, and returns copy #1 to the generator within two (2) weeks.

User Provided Information and Previous Environmental Investigations
ASTM E 1527-05 User Questionnaire

In order to qualify for the protection offered under the EPA All Appropriate Inquiry (AAI) Standard, the User (entities seeking to use the ASTM E1527-05 Practice to complete an environmental site assessment of the property; i.e. Lenders and/or Borrowers) must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that AAI is not complete. This information should be the collective knowledge of the entities relying on the Phase I. Please note that you are not being asked to evaluate the property, but rather to provide your knowledge of information on the property.

Site Name/Address: ____________________________________________________________

Person Interviewed/Title: __________________________________ Date: __________

If known, when was the property initially developed? ____________________________

If different, when were the current building(s) on the property constructed? _______

1. Environmental cleanup liens that are filed or recorded against the site (40 CFR 312.25).

Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law? (Note: If unknown, a review of title records or an environmental lien search is recommended)

Yes [ ] No [X] If you answer yes, please include an explanation in the space provided below:
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

2. Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26).

Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

Engineering Controls are defined as physical modifications to a site or facility to reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property. Institutional Controls are defined as a legal or administrative restriction on the use of, or access to, a site or facility to 1) reduce or eliminate the potential for exposure to hazardous substances or petroleum products in the soil or ground water on the property, or 2) prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment.

Yes [ ] No [X] If you answer yes, please include an explanation in the space provided below:
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

3. Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28).
As the User of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes [ ] No [ X ] If you answer yes, please include an explanation in the space provided below:

_____________________________________________________________________________________________________
_____________________________________________________________________________________________________
_____________________________________________________________________________________________________
_____________________________________________________________________________________________________

4. Relationship of the purchase price to the fair market value of the property if it were not contaminated (40 CFR 312.29).

a) Does the purchase price being paid for this property reasonably reflect the fair market value of the property?

Yes [ X ] No [ ] If you answer no, please include an explanation in the space provided below, including whether the lower purchase price is because contamination is known or believed to be present at the property?

_____________________________________________________________________________________________________
_____________________________________________________________________________________________________
_____________________________________________________________________________________________________
_____________________________________________________________________________________________________

5. Commonly known or reasonably ascertainable information about the property (40 CFR 312.30).

Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as User:

a. Do you know the past uses of the property?

Yes [ X ] No [ ]

b. Do you know of specific chemicals that are present or once were present at the property?

Yes [ ] No [ X ]

c. Do you know of spills or other chemical releases that have taken place at the property?

Yes [ X ] No [ ]

d. Do you know of any environmental cleanups that have taken place at the property?

Yes [ ] No [ X ]

If you answered yes to any of the questions above, please include an explanation in the space provided below:

The site was previously used as a sewage treatment plant.
The State became involved in a chemical release incident on the property.
6. The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the User of this ESA, based on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property?

Yes [X]  No [ ] If you answer yes, please include an explanation in the space provided below:

PHASE I ESA FOR PROJECT SITE

[PLEASE NOTE: PREVIOUS ENVIRONMENTAL INVESTIGATIONS ARE PROVIDED AS ATTACHMENT K TO PHASE I]
PHASE I
ENVIRONMENTAL SITE ASSESSMENT REPORT
for the Property Known as Echo Bay Redevelopment Site – Phase I(a)
Section 1, Block 84, Lots 0005, 0022 and 0110
New Rochelle, New York

Prepared for:
Forest City Residential Group
Forest City Residential, Inc.
1775 Broadway, Suite 701

Mimi S. Raygorodetsky
Project Manager
EXECUTIVE SUMMARY

Environmental Liability Management of New York, LLC (“ELM”) completed a Phase I Environmental Site Assessment (“ESA”) for the property referred to as Echo Bay Redevelopment, Parcel Phase I(a). The legal definition of the property is Section 1, Block 84, Lots 0005, 0022 and 0110, New Rochelle, New York (the “subject property” or “property”). The property is approximately 10.62 acres in size and is bound by Main Street to the north, commercial uses to the east and west, and Echo Bay to the south.

The Phase I ESA was completed in conformance with the scope and limitations of American Society for Testing and Materials (“ASTM”) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process Standard E1527-05. This Phase I ESA included a site inspection of the subject property and the adjacent and surrounding properties; a review of environmental agencies’ databases; performed FOIL inquiries with City, State, and Federal agencies and reviewed received documentation; a review of historical topographic photographs, historical aerial photographs, Sanborn Fire Insurance Maps and city directories; the performance of an environmental lien search; a review of previous studies; and interviews with property owners and others familiar with operations at the site.

The objective of the environmental assessment was to identify, to the extent feasible pursuant to the ASTM Standard 1527-05, Recognized Environmental Conditions (“RECs”) in connection with the property. Any exceptions to, or deletions from, this practice are discussed in Section IV of this report.

This assessment has revealed RECs in connection with the subject property.

The following RECS were identified specific to a single Lot:

Lot 0005 - 220 – 224 East Main Street
Lot 0005 was historically occupied by a boat yard (circa 1911) and by the Department of Public Works circa 1917 through the present. The lot currently contains several
interconnected one-story brick and concrete structures in the northern portion of the site and one free-standing, large, brick structure and one free-standing, large, corrugated metal structure, both in the southern portion of the site. Lot 0005 also contains paved surfaces. The structures were either used for offices, storage or for the repair of city-owned vehicles at the time of the site inspection for the preparation of this report.

The following RECs were noted for Lot 0005:

- **History of Use as a Boat Yard.**
  Historical Sanborn Maps indicate Lot 0005 was used as a Boat Yard circa 1911. Boat fueling, maintenance and repair are typically associated with boat yards. The activities typically utilize chemicals such as petroleum, paints (often containing heavy metals) and solvents. The operational history as a boat yard may have led to on-site soil and or groundwater contamination.

- **History of Auto Repair.**
  The Department of Public Works has reportedly used Lot 0005 for vehicle maintenance and repair since circa 1917. These activities typically involve the use of chemicals such as petroleum, paints (often containing heavy metals) and solvents, all of which have been further documented to be currently present on-site during the site inspection for the preparation of this report. The long operational history and as a vehicle maintenance and repair facility may have led to on-site soil and or groundwater contamination.

- **Current and Former Underground and Aboveground Storage Tanks.**
  The table below itemizes chemical storage tanks that were observed by ELM personnel during the site inspection or were reported by City of New Rochelle personnel during site interviews. Unless otherwise indicated, the date of installation of these tanks is unknown.
Tank(s) | Notes | Location
--- | --- | ---
2 x 500-gal ASTs | Contents not specified. However, because of location in the boiler room, it is likely that these tanks are or were used to store fuel oil. Tanks were in containment. It is unknown if these tanks were active. | In boiler room located in the cellar of a one-story structure in the northern-most portion of the lot. A vent pipe and fill cap were noted outside of the structure.

1 x 275 gal AST | Contents unknown. Tanks were in containment. It is unknown if these tanks were active. | In the lunchroom of a one-story structure located on the northern-most portion of the lot.

1 x fuel oil AST | Size unknown. Tank was in containment. It is unknown if this tank was active. | Outside and east of the series of interconnected one-story structures on the northern portion of the lot.

1 x 275-gal AST | Contents unknown. It is unknown if this tank was active. | Outside and east of the series of interconnected one-story structures on the northern portion of the lot.

2 x 275-gal ASTs | Contents unknown. Tanks were in containment. It is unknown if these tanks were active. | Inside of a one-story structure used for storage that is part of the series of interconnected one-story structures on the northern portion of the lot.

1 x 4,000-gal diesel AST
1 x 3,000-gal gasoline AST | Tanks were in containment. Tanks were active. | Tanks used to fuel city-owned trucks. Tanks are reportedly connected via underground piping to the pump islands located outside of the corrugated metal garage in the southern portion of the site.

1 x 5,000-gallon fuel oil UST | Tank is reportedly active. | A fill port and a concrete pad were observed between the old large brick structure and the newer corrugated metal garage in the southern portion of the site.

1 x 275-gal antifreeze AST
1 x 475-gal engine oil AST
1 x 475-gal transmission oil AST
1 x 475-gal hydraulic fluid AST
1 x 650-gal waste oil AST
Several hydraulic oil ASTs associated with former hydraulic lifts | Tanks were in containment and were active. | Inside of the large, corrugated metal garage located in the southern portion of the site.

The following table describes the USTs that were removed from Lot 0005 over the last several years, according to City of New Rochelle personnel during site interviews. This table has been supplemented with information provided in previous studies and other relevant documentation.

| Tank(s) | Notes | Location |
--- | --- | ---
1 x 5,000-gallon diesel and 2 x 2,000-gallon gasoline USTs | These tanks were reportedly removed from the Lot in 1998 and 2001. | A concrete pad was observed between the old large brick structure and the newer corrugated metal garage in the southern portion of the site.

4 x 1,000-gallon fuel oil USTs | Mr. Fevang indicated these tanks were removed in 1994. | A concrete pad was observed directly east of the newer corrugated metal garage in the southern portion of the site.

1 x 2,500 gallon waste oil UST | This tank was reportedly removed in 2003. | An asphalt pad was observed directly south of the newer corrugated metal garage in the southern portion of the site.

55-gallon Kerosene AST | Mr. Fevang indicated these tanks were removed from the northcentral portion of the site in the late 1990s. | Inside of the corrugated metal garage.
Lot 0005 is listed in the New York State Department of Environmental Conservation (NYS DEC) Petroleum Bulk Storage database for having the following tanks:

- One 3,000-gallon and four 1,000-gallon in-service lube oil underground storage tanks (USTs) that were installed in 1969;
- One 5,000-gallon in-service fuel oil USTs that was installed in 1969;
- One 2,000-gallon in-service fuel oil UST that was installed in 1947;
- One 550-gallon closed fuel oil UST with vaulted access that was installed in 1947 and closed in 1996;
- One 5,000-gallon in-service diesel UST that was installed in 1969; and
- Two 2,000-gallon in-service unleaded gasoline USTs that were installed in 1969.

The following tank records were on file for Lot 0005 with the City of New Rochelle Fire Department:

- A record dated December 14, 1961 for the storage of 2,000-gallons of #2 Fuel Oil in an underground storage tank. The tank is noted to be located in the “New Sewers & Drains bldg. Old repair garage. Boiler room on garage at rear of bldg.”
- A record dated December 14, 1961 for the storage of 3,000-gallons of #4 fuel oil in an underground storage tank. A notation on this listing indicated that this tank was removed on April 2002.
• A record dated December 14, 1961 for the storage of 550-gallons of #2 fuel oil in a cellar. The tank is noted to be located in the Administration bldg, which front Main Street.

• A record dated March 2, 1970 for the storage of 5,000-gallons of #4 Fuel Oil in an underground storage tank. The tank is noted to be located in the “New Repair Garage.” The tank was reportedly tested in 2004 and again in 2007.

• A record dated November 4, 2004 for the removal of four 1,000-gallon underground motor oil storage tanks. A Petroleum Tank Closure Form also documented the closure of these four tanks. This form noted that the site was not free of contamination after the tank removal.

• An undated Petroleum Tank Closure Form documented the removal of one 4,000-gallon underground storage tank. This form noted that the site was not free of contamination after the tank removal.

• An Installation and/or Modification of Petroleum Bulk Storage Tanks Form dated June 30, 2004 notices the installation of two 4,000-gallon tanks. No information was provided as to whether these tanks were aboveground or underground and no information was provided regarding tank contents.

• A record dated December 11, 2006 references a fuel oil burner connected to a 3,000-gallon aboveground storage tank located in the “Stone Storage bldg. attached to old stone storage garage.”

• A Tightness Test Report dated March 2, 2005 documented the testing of one 5,000-gallon #2 fuel oil underground storage tank. The report documented that the tank was found to be tight.
• A Westchester County Department of Health Petroleum Bulk Storage Registration Certificate issued April 2, 1998 listed the following tanks for Lot 0005:
  
  ▪ One 3,000-gallon tank associated with Spill No. 9803810 which was removed in April 2002;
  
  ▪ Four 1,000-gallon tanks;
  
  ▪ One 5,000-gallon tank; and
  
  ▪ Three 2,000-gallon tanks that were removed in April 1998. Two of the tanks were noted to be associated with Spill Nos. 9803810 and 9713578.

• A letter dated June 4, 1998 from the City of New Rochelle Department of Public Works to the New York State Department of Environmental Conservation (NYS DEC) regarding Spill No. 9800763 indicated that an oil water separator would be collected to all floor drains in the garage and to the sanitary sewer system, a 2,000-gallon tank that failed an integrity test has been removed and soil beneath the tank was tested and data was presented to NYS DEC (the letter did not indicate if the soil was contaminated).

• A letter dated March 17, 1998 from ProTest Enterprises to the City of New Rochelle documented the testing of seven tanks located in New Rochelle; three of the tanks were located on Lot 0005. The tanks that were tested that were located on Lot 0005 are as follows:
  
  ▪ One 5,000-gallon diesel underground storage tank;
- One 5,000-gallon #2 fuel oil underground storage tank;

- One 2,000-gallon #2 fuel oil underground storage tank (Spill No 9713578 is referenced on the Testing Sheet).

Previous studies further document the site to have historically contained various other ASTs and USTs.

It should be noted that the descriptions of the size, contents and locations of various current and former USTs and ASTs vary in certain reports, PBS listings, City of New Rochelle Fire Department records and information gathered during site interviews and during the site inspection. In many instances, it is difficult to determine which records are duplicative for a tank or a group of tanks.

Nine releases have been reported to NYS DEC Spills Hotline. Two of these reported releases have an active status. The City of New Rochelle Department of Public Works is reportedly proceeding under the NYS DEC Spills Group to address the active spill listings.

- Stored Chemicals.

Many chemicals used in auto repair were observed to be present on Lot 0005 during the site inspection for the preparation of this report. These chemicals were stored in 55-gallon drums or smaller containers and were generally located within the corrugated metal garage building. Welding gases and spent automobile batteries were also noted to be present in a portion of the corrugated metal garage building.

The long history of chemical use may have impacted on-site soil and groundwater.
• **Miscellaneous Fill Material from Unknown Source.**
Several piles of dirt were observed on the paved portions of the lot during the site inspection. There has been a history of unauthorized dumping on Lot 0005 at various locations. Lot 0005 also has had a history of temporary storage of construction and demolition debris. The long history of unauthorized dumping and storage of construction and demolition debris on Lot 0005 may have impacted subsurface soil and groundwater conditions.

• **On-site Oil-Water Separator.**
Mr. Fervang noted that an oil/water separator was installed between the old large brick structure and the newer corrugated metal garage in the southern portion of the site. The date of installation of this separator is unknown. Water used in vehicle maintenance in the corrugated metal garage is reportedly collected in metal-grated trenches and directed through this oil water separator before it is discharged to the municipal sewer system. Oil is reportedly removed from the oil/water separator on an as-needed basis.

The long operation of a waste water collection and oil/water separation system on Lot 0005 may have impacted on-site soil and groundwater conditions.

• **Former On-Site Transformer.**
Previous studies indicated that a transformer was formerly present north of the corrugated metal garage building in the southern portion of the site. This transformer was not observed during the site inspection conducted for the preparation of this report.

Transformers often utilize polychlorinated biphenyls (PCBs). Any releases of PCBs from the former on-site transformer could have impacted soil and/or groundwater conditions.
• **Active Spill Listings.**

A total of nine spills were reported to NYS DEC for Lot 0005. Two of the listings remain active. It was reported that some of the seven closed spills were closed by the NYS DEC Project Manager solely for the purpose of consolidated spill listings. A summary of the two open listings follows:

- The New Rochelle Department of Public Works, located on Lot 0005 on the subject property, was listed in the Spills database because a tank test failure occurred on a 2,000-gallon gasoline underground storage tank located in a garage in 1998.

- The New Rochelle Department of Public Works was listed a second time in the Spills database. The active listing reported that someone performing 'site work' identified petroleum-contaminated soil in 2001. The listing indicated that a groundwater investigation was performed in 2002 and a soil vapor extraction/air sparging pilot test occurred in 2004.

• **RCRA Generator Listing**

Lot 0005 was listed in the Resource Conservation and Recovery Act Generators database. The listing is summarized below:

- The Municipality of New Rochelle, listed at 224 Main Street on Lot 0005 on the subject property, was listed in the RCRA database for having generated 12,135 gallons of solid waste that exhibits the characteristic of ignitability in 1983. There were no violations associated with this listing.

• **Previous and Ongoing Site Remediation.**
Interviews with site personnel and previous studies and other relevant documentation indicate that soil and groundwater investigation and remediation have occurred and continue to occur on Lot 0005.

City of New Rochelle Department of Public Works personnel reported that contaminated soil was discovered in the vicinity of the diesel and gasoline tanks that were removed from between the old large brick structure and the newer corrugated metal garage in the southern portion of the site. Contaminated soil was reportedly removed from this area and six groundwater monitoring wells were installed and sampled. The results of this investigation have not been provided to or reviewed by ELM. City of New Rochelle Department of Public Works personnel further noted that, in 2004, three or four more groundwater monitoring wells were installed in this area as part of a plan to operate an air sparging system to remediate contaminated groundwater. The NYS DEC agreed to delay the operation of the air sparging system until additional soil remediation related to a former sewer pump foundation (see next paragraph) has occurred. Several groundwater monitoring well manhole covers were observed in this area during the site inspection.

Another area of contaminated soil was reportedly discovered when underground piping was installed to link the current gasoline and diesel ASTs to the pump island located directly east of the corrugated metal garage. City of New Rochelle Department of Public Works personnel reported that some contaminated soil was removed from this area and that, during this soil removal, a buried former sewer pump station foundation was identified. The former foundation reportedly acts as a sink for the collection of contaminated water and oil in the area. Previous studies indicated that 1,400 gallons of product were pumped out of this structure; this report may or may not be related to the RCRA Generator listing from 1983 for the removal of 12,135 gallons of solid waste that exhibits the characteristic of ignitability. The removal of additional water/oil from this area is currently underway under the direction of NYS DEC Spills Group.
**Recommendations for Lot 0005**

Although some soil and groundwater investigation has been performed on Lot 0005, particularly in the southern portion of the site, documentation has not been reviewed to indicate that all recognized environmental conditions have been sufficiently investigated and/or remediated to date. As such, a testing program that includes the sampling of on-site soil and groundwater and sediment from Echo Bay is recommended at this time. This testing program should include the sampling of on-site piles of dirt.

Prior to and/or during redevelopment of site, proper characterization and disposal of stored chemicals, ASTs, USTs and piles of fill material are recommended.

**Lot 0022 - 270 Main Street**

Lot 0022 was historically occupied by residential dwellings and associated out buildings circa 1911 through circa 1931 and by the New Rochelle Armory circa 1931 through the present. The lot currently contains four structures:

- a large, three-story, brick-structure with a basement in the northern portion of the lot;
- a corrugated metal structure in the southern portion of the lot;
- a small, one-story garage structure in the southern portion of the lot; and
- a small storage shed located immediately south of and adjacent to the large, three-story, brick structure with a basement in the northern portion of the site.
In addition, the Lot includes paved and landscaped surfaces. The one-story garage and the storage shed were inaccessible at the time of the site inspection for the preparation of this report, but reportedly contain stored building materials. The large three-story brick structure is reportedly vacant most of the time, with the exception of around Halloween, when it is used by the City of New Rochelle as a Haunted House. The corrugated metal structure is currently being used by Habitat for Humanity for building materials storage. Habitat for Humanity also stores building materials in metal containers and in piles on the paved and landscaped portions of the lot.

The following RECs were noted for Lot 0022:

- **Current and Former Underground and Aboveground Storage Tanks.**

  Two 275-gallon ASTs, two old boilers, wall-mounted electrical units and a water tank were observed in a boiler room located in the basement of the large three-story brick building. A previous study indicated that cracks were observed in the boiler room and a fuel oil odor was also observed.

  Lot 0022 was listed twice in the NYS DEC Petroleum Bulk Storage database. A summary of these listings is below:

  - New Rochelle Armory, listed at 270 East Main Street on Lot 0022 on the subject property, was listed in the PBS database as having one 8,000-gallon in-service fuel oil UST with vaulted access.

  - Navy Motion Picture Service, listed at 270 Main Street on Lot 0022 on the subject property, was listed in the PBS database as having one 7,500-gallon in-service fuel oil UST with vaulted access.
A vent pipe and fill cap, presumably associated with either the ASTs in the boiler room or the USTs noted in the PBS listing, were observed outside of the southern side of the large three-story brick structure during the site inspection.

The City of New Rochelle reported that one fuel oil tank is currently active on Lot 0022, though it is unclear which of the identified tanks is the active tank.

Any historical releases of petroleum or other chemicals from ASTs or USTs may have impacted on-site soil and groundwater.

- **Former on-site Shooting Range**

  A former shooting range associated with the Armory use was observed in the basement of the three-story building. It is unknown when and for how long the shooting range was utilized. The floor of the range was concrete and no bullets or spent shot were observed in the room at the time of the site inspection.

  Lead associated with ammunition for guns discharged on the shooting range may have impacted on-site soil and/or groundwater conditions if cracks were present in the basement concrete or if the floor of the shooting range was historically dirt.

- **Stored Chemicals.**

  One half-full 55-gallon drum was observed in the basement of the three-story building; the contents of this drum were unknown. One 20-cubic yard waste container was noted to be present on the paved and landscaped areas. It was filled with miscellaneous building materials. A stack of paint cans and containers of <5-gallon capacity were noted to be stored in a landscaped area in the southern portion of the site.
The long period of military operations at the site may have resulted in historical releases of petroleum or other chemicals that impacted on-site soil and groundwater.

- **Three RCRA Generator Listings**

Lot 0022 was listed three times in the Resource Conservation and Recovery Act Generators database. The listings are summarized below:

  o NYS DEC Region 3, listed at 270 Main Street on Lot 0022 on the subject property, was listed in the RCRA database for having generated 200 pounds of mercury in 2000.

  o Naval Motion Picture Service, listed at 270 Main Street on Lot 0022 on the subject property, was listed in the RCRA database as a Conditionally-Exempt Small Quantity Generator for having generated 55 gallons of lead in 1994.

  o US Navy Motion Picture Service, listed at 270 Main Street on Lot 0022 on the subject property, was listed in the RCRA database as a Conditionally-Exempt Small Quantity Generator. No information related to the type or volume of wastes generated was provided in the listing.

The undocumented mishandling of any chemicals on Lot 0022 may have impacted on-site soil and/or groundwater conditions.

- **Chemical Staining**

Previous studies reported that areas of “chemical staining” were observed in the vicinity of an on-site garage building during a site inspection of Lot 0022 on March 28, 2003. Although no evidence of staining was noted during the site
inspection for the preparation of this report, the previous report observations indicate the potential for a chemical release to have occurred that may have adversely impacted on-site soil and groundwater quality.

**Recommendations for Lot 0022**

A testing program that includes the sampling of on-site soil and groundwater and sediment from Echo Bay is recommended to further investigate the recognized environmental conditions for Lot 0022.

Prior to and/or during redevelopment of site, proper characterization and disposal of stored chemicals, ASTs and USTs is recommended.

**Lot 0110 - Huntington Place**

Lot 0110 was historically the location of a boat house and hen house (circa 1911), vacant land (circa 1931 through 1951) and a boat yard and motor house (circa 1990). Lot 0110 is currently improved with two one-story vacant structures (one small, one-story, brick and concrete structure in the northern portion of the site and one larger, one-story corrugated metal structure in the western portion of the site), a bulkhead fronting Echo bay and paved and landscaped surfaces. Lot 0110 is currently vacant and fenced.

The following RECs were identified for Lot 0110:

- **History of Use as a Boat Yard.**
  
  Historical Sanborn Maps and previous studies indicate Lot 0110 was used as a boat yard and as a marina. Boat fueling, maintenance and repair are typically associated with boat yards and marinas. The activities typically utilize chemicals such as petroleum, paints, and solvents. The operational history and potential handling of chemicals typically associated with boat yards may have lead to on-site soil, groundwater and/or sediment contamination.
• **Current Aboveground Storage Tanks.**
  One 275-gallon AST was observed inside of the large one-story corrugated metal structure. The contents of the tank were unknown.

  Historical releases of petroleum or other chemicals from ASTs may have impacted on-site soil and groundwater.

• **Miscellaneous Drums.**
  A metal container box was observed on the landscaped portion of the lot. One 55-gallon drum was observed within the metal container box; the contents of this drum were unknown.

  Chemical use on Lot 0110 may have resulted in historical releases of petroleum or other chemicals that impacted on-site soil and groundwater. Similarly, if these chemicals are mishandled in the future, on-site soil and groundwater could be impacted.

• **Miscellaneous Fill Material from Unknown Source.**
  Several piles of dirt were observed on the landscaped and paved portions of the lot. There has been a history of unauthorized dumping on Lot 0110 at various locations. Lot 0110 also has had a history of temporary storage of construction and demolition debris. The long history of unauthorized dumping and storage of construction and demolition debris on Lot 0110 may have impacted subsurface soil and groundwater conditions.

*Recommendations for Lot 0110*
A testing program that includes the sampling of on-site soil and groundwater and sediment from Echo Bay is recommended to further investigate and characterize all recognized environmental conditions for Lot 0110. This testing program should include the sampling of on-site piles of dirt.
Prior to and/or during redevelopment of site, proper characterization and disposal of on-site drums, storage tanks and piles of dirt are recommended.

The following RECs were identified for all three lots that comprise the subject property:

**Historic Fill from Unknown Sources**

Historical topographic maps, historical aerial photographs, a previous study (*Draft Brownfields Site Background Memorandum for New Rochelle City Armory, 270 Main Street, New Rochelle, New York*, prepared by Foster Wheeler Environmental Corporation and dated March 2003) and a Geotechnical Report (*Draft Preliminary Geotechnical Report, Echo Bay Project, New Rochelle, New York*, prepared by Mueser Rutledge Consulting Engineers and dated April 3, 2007) document the use of fill material from an unknown origin to extend the Echo Bay shoreline along the southern portion of Lots 0005, 0022 and 0110.

Because this fill material is of unknown origin, it is recommended that a subsurface testing program be implemented to determine whether any contaminant sources are present in the fill material.

**Fluorescent Lights**

Lots 0005, 0022 and 0110 contain buildings that utilize fluorescent lighting. Older fluorescent lights and fixtures may include polychlorinated biphenyl (PCB)- and/or mercury-containing components (including capacitors and potting compounds). Any releases of PCBs or mercury from the fluorescent lighting could have impacted soil and/or groundwater conditions.

Fluorescent lights and fixtures should be properly disposed of during demolition of any existing structures on these Lots.
Suspect Asbestos-containing Building Materials and Lead-Based Paint

Lots 0005, 0022 and 0110 contain buildings that may contain asbestos-containing building materials (ACBM) and/or lead-based paint (LBP).

Prior to any renovation or demolition activities with the potential to disturb suspect ACBMs, an asbestos survey should be conducted. If these materials prove to contain asbestos, they should be properly removed and disposed of in accordance with all state and federal regulations. If any of the aforementioned ACMs are to be unaffected by any future renovation activities, they can remain in the buildings and will need to be managed in accordance with applicable federal regulations (29 CFR 1910.1001) of the Occupational Health and Safety Administration (OSHA). These OSHA regulations include requirements for the training of building occupants and workers, posting of warning signs and labeling of the ACMs, appropriate maintenance procedures to avoid disturbances of ACMs, and record keeping, etc. ACMs should be regularly inspected and maintained by licensed contractors to prevent deterioration.

Any renovation or demolition activities with the potential to disturb lead-based paint must be performed in accordance with the applicable Occupational Safety and Health Administration regulation (OSHA 29 CFR 1926.62 - Lead Exposure in Construction). Current New York State Department of Environmental Conservation guidance permits the disposal of construction materials covered with lead-based paint as demolition debris within an approved landfill.

Off-site History of Industrial Use

Commercial and industrial uses were shown to be interspersed with residential uses in the area surrounding the subject property in historical Sanborn maps from 1911 through 1990. Commercial and industrial uses in the surrounding area included: a lunch wagon factory (circa 1911), a manufacturer of dining cars (circa 1931), a supplier of coal and building materials (circa 1931), oil storage terminal(s) (circa 1931 through 1990), a
chemical laboratory (circa 1951 through circa 1990), a furniture warehouse (circa 1951),
an upholsterer (circa 1951), Power Tronic Systems Electronics (circa 1990), an
electronics laboratory (circa 1990) and auto repair facilities, auto parking, auto sales,
auto painting and filling stations (various years).
DISCLAIMER

Environmental Liability Management of New York, LLC ("ELM") has prepared this report based upon a review of information provided by the client as well as information collected and/or developed as part of the specific scope of work under this project. The report was prepared for the exclusive use of the client of record for the stated objectives relative to the subject property. No other warranty, express or implied, is made.

ELM does not purport to give legal advice. Any reference to legal issues or terms is provided as part of the general environmental risk assessment and is not a substitute for the advice of competent legal counsel.
